

CONTENTS

1. SOME BASIC CONCEPTS	
1.1. Introduction	1
1.2. Electrons in solids	6
1.3. Adsorption	17
1.4. Surface characterization	20
1.5. Surface reactivity patterns and bonding	25
1.6. Thermochemistry of surface processes	33
1.6.1. Isothermal calorimeters	37
1.6.2. Adiabatic calorimeters	37
1.7. Kinetic studies	39
1.7.1. Absolute rate theory	41
2. CRYSTALLOGRAPHY OF METALS	
2.1. Introduction	49
2.2. The basic point lattices	50
2.3. Metal crystals	52
2.4. Miller indices	56
2.5. Projections of crystals	61
2.6. Orientation of single crystals	65
2.7. Reciprocal space	67
2.8. Single-crystal metal surfaces	73
2.8.1. Surface models	73
2.8.2. The density and co-ordination of surface atoms	80
2.8.3. The stability of crystal surfaces	84
2.9. Crystal defects	88
2.10. Diffusion in solids and on solid surfaces	92
3. THE DETERMINATION OF SURFACE STRUCTURE	93
3.1. Introduction	93
3.2. LEED: basic experimental observations	100
3.3. LEED: basic pattern interpretation	104
3.3.1. General physics of diffraction	104
3.3.2. Spot positions	105
3.3.3. Clean-surface patterns	113
3.3.4. Overlay patterns	115
3.4. LEED: kinematic diffraction theory	121
3.4.1. Reciprocal-space intensity profiles	122
3.4.2. Spot intensity profiles—qualitative considerations	130
3.5. Spot intensity profiles: quantitative considerations	135
3.5.1. Kinematic theory	135
3.5.2. Modified kinematic theory	139
3.5.3. Data-reduction techniques	144
3.5.4. Dynamical theories	146

3.6. Coincidence lattices	150
3.6.1. Scattering by a coincidence lattice	152
3.6.2. Multiple scattering	154
3.6.3. Parameter modulation	157
3.7. Diffraction by imperfect structures	158
3.7.1. Background intensity, diffuse spots, and ring patterns	160
3.7.2. Split spots and streaks	161
3.7.3. Patterns from faceted surfaces	165
4. ELECTRON SPECTROSCOPY	
4.1. Introduction	168
4.1.1. Photoemission and the solid state	170
4.1.2. Quantum mechanical description and Koopmans' theorem	173
4.2. Photoelectron spectroscopy	175
4.2.1. Applications in surface chemistry	181
4.2.2. Surface sensitivity and escape depth of photoelectrons	183
4.3. Auger electron spectroscopy (AES)	185
4.3.1. Introduction	185
4.3.2. Nomenclature in AES	188
4.3.3. Energies of Auger electrons	189
4.3.4. Quantitative analysis	192
4.3.5. Experimental techniques used in AES	194
4.3.6. Loss features in Auger spectroscopy	196
4.3.7. Applications of Auger spectroscopy	197
4.4. Appearance-potential spectroscopy (APS)	201
4.5. Ion-Neutralization spectroscopy (INS)	203
4.6. Summarizing comments	205
5. INFRARED, RAMAN AND PARTICLE IMPACT SPECTROSCOPIES	
5.1. Introduction	212
5.2. Infrared and Raman spectroscopy	213
5.2.1. Transmission infrared	213
5.2.2. Reflection infrared	215
5.2.3. Theoretical background to reflection method	217
5.2.4. Infrared emission spectroscopy	217
5.2.5. Raman spectroscopy	219
5.3. Electron-impact excitation of the vibrations of adsorbed species	222
5.4. Electron-stimulated desorption (ESD) or electron-impact desorption (EID)	224
5.4.1. Experimental methods in ESD studies	226
5.4.2. Cross-sections of ion desorption	226
5.4.3. Threshold values	227
5.5. Ion scattering and secondary-ion mass spectroscopy	228

6. EXPERIMENTAL ASPECTS OF SURFACE KINETICS	234
6.1. Introduction	234
6.2. Gas-solid collisions	235
6.2.1. Molecular-beam scattering	235
6.2.2. Thermal accommodation coefficient measurements	235
6.3. Surface diffusion	237
6.3.1. Field electron emission	238
6.3.2. Field ion emission	242
6.4. Kinetics of adsorption	249
6.4.1. The rate of impingement of gas molecules on a surface	250
6.4.2. The rate of adsorption	256
6.4.3. Rate of desorption in relation to sticking probability	263
6.5. Kinetics of desorption	264
7. PHYSICAL ADSORPTION	280
7.1. Introduction	280
7.2. Forces in physical adsorption	281
7.3. Work-function studies	288
7.3.1. Adsorption of inert gases on single-crystal planes	289
7.4. Structural aspects of the adsorbed layer	295
7.5. Analysis of physical-adsorption isotherm data	299
7.6. Conclusions	302
8. MODELS FOR THE ADSORPTION AND DESORPTION PROCESSES	305
8.1. Generalized model for the interaction of a gas-phase particle with a solid	305
8.2. The initial gas-surface collision	307
8.2.1. Linear harmonic oscillator chain model	309
8.2.2. The hard- and soft-cube models	311
8.2.3. The square-well model	314
8.2.4. Conclusions regarding the initial gas-surface collision	315
8.3. Surface diffusion	316
8.3.1. Type 1 diffusion	316
8.3.2. Type 2 diffusion	320
8.3.3. Type 3 diffusion	321
8.4. Kinetic models for chemisorption	323
8.5. The effect of adsorbate-adsorbate interactions	337
8.6. Conclusion	343
9. CARBON MONOXIDE	346
9.1. Introduction	346
9.1.1. Molecular-orbital description of carbon monoxide	346

9.2. Kinetic and adsorption studies	347
9.2.1. Polycrystalline tungsten + CO	347
9.2.2. CO adsorption on W (110)	350
9.2.3. Molybdenum and other transition metals	351
9.3. Work-function studies on single-crystal planes of tungsten	355
9.4. Isotopic studies	357
9.5. Electron-impact desorption	358
9.6. LEED studies	359
9.6.1. W (211) surface	359
9.6.2. Pt (111), (100), and stepped Pt surfaces	359
9.6.3. Ni (100) and (111) surfaces	360
9.6.4. Cu (100) surface	362
9.7. Field emission and field ion microscopy (FEM and FIM)	363
9.8. Infrared spectroscopy	364
9.8.1. CO adsorption on Cu	366
9.8.2. CO adsorption on W and Pt	367
9.9. Electron-spectroscopic studies of CO adsorbed on Mo and W	369
9.9.1. XPS studies of CO adsorption	369
9.9.2. UPS studies of CO adsorption	371
9.10. XPS and UPS studies of the Fe + CO system	373
9.11. Mechanism of CO bonding	373
9.12. Conclusions	377
10. HYDROGEN AND NITROGEN	382
10.1. Introduction	382
10.2. Hydrogen interaction with metals	382
10.2.1. General aspects	382
10.2.2. Hydrogen adsorption on tungsten and molybdenum	384
10.2.3. Hydrogen adsorption on nickel, palladium, and platinum	
10.3. Kinetic and related studies of nitrogen interaction with metals	405
10.3.1. General aspects	405
10.3.2. Nitrogen adsorption on tungsten—high-energy binding states	407
10.3.3. Nitrogen adsorption on tungsten—states of intermediate binding energy	425
10.3.4. Nitrogen adsorption on tungsten—states of low binding energy	427
10.3.5. Nitrogen adsorption on rhenium	428
10.3.6. Nitrogen adsorption on nickel, palladium, and platinum	429
10.4. Electron spectroscopic studies of nitrogen and related molecules	432
10.5. Conclusions	434

11. THE INTERACTION OF OXYGEN WITH METAL SURFACES	439
11.1. Introduction	439
11.2. Oxygen chemisorption and incorporation	440
11.2.1. Kinetics of oxygen chemisorption and incorporation	441
11.3. Oxide-film growth or oxidation	453
11.4. Flash desorption and the nature of surface oxygen	459
11.5. Electron spectroscopy	461
11.5.1. Interaction of oxygen with metals	461
11.5.2. Interaction of water vapour with metals	469
11.6. Low-energy electron diffraction	471
11.7. Conclusions	478
12. METAL ADSORPTION ON METALS	483
12.1. Introduction	483
12.2. Surface diffusion and nucleation	484
12.2.1. Single-atom mobilities	484
12.2.2. Clustering	490
12.2.3. The effects of impurities and lattice defects	492
12.2.4. Faceting	495
12.3. Transition-metal adsorption on tungsten	498
12.4. Alkali and alkaline-earth adsorption on transition metals	503
12.4.1. Surface structures	503
12.4.2. Binding energies	509
12.4.3. Work-function changes and dipole moments	512
12.5. Quantum-mechanical treatment of chemisorption	518
12.5.1. General principles	518
12.5.2. The Anderson model	529
12.5.3. Surface molecules	530
12.5.4. Indirect adatom-adatom interactions	531
12.5.5. Alternative approaches to chemisorption theory	532
13. THE IMPACT OF NEW EXPERIMENTAL DEVELOPMENTS ON HETEROGENEOUS CATALYSIS	536
13.1. Introduction	536
13.2. Catalytic behaviour of tungsten carbide	536
13.3. Nature of a supported molybdenum hexacarbonyl olefin disproportionation catalyst	539
13.4. Unsuspected surface reactions	539
13.5. Role of minor elements	541
13.6. Crystal orientation in metal surfaces	542
13.7. Atomic composition of alloy surfaces	543
13.8. Surface reactions of adsorbed hydrocarbons	545

13.9. Small-molecule reactions at stepped surfaces	546
13.10. Theoretical studies	548
APPENDIX. Wave theory	553
