## 1. A Brief History of Microscopy

1.1. Introduction .....	1
1.2. Corrections for Aberrations .....	4
1.3. Dark-Field Microscopy .....	7
1.4. Polarizing Microscope .....	7
1.5. The Short History of Electron Microscopes .....	8
1.6. Brief History of the Scanning Electron Microscope (SEM) .....	10
1.7. The Electron-Probe Microanalyzer (EPMA) .....	11
1.8. History of Field-Emission Microscopes .....	12
1.9. Scanning Acoustic Microscopy .....	13

## 2. Definitions, Attributes Contributing to Visibility, and Principles

2.1. Definitions and Attributes Contributing to Visibility .....	15
2.2. Principles in Terms of Attributes .....	17
2.2.1. Thought, Memory, and Imagination .....	17
2.2.2. Resolving Power .....	17
2.2.3. Resolution .....	18
2.2.4. Contrast Perception .....	18
2.2.5. Refractive Aberrations .....	19
2.2.6. Cleanliness and Orderliness .....	24
2.2.7. Depth of Focus .....	24
2.2.8. Focus .....	25
2.2.9. Illumination .....	26
2.2.10. Radiation .....	30
2.2.11. Anisotropy .....	32
2.2.12. Magnification .....	32
2.2.13. Field of View .....	36
2.2.14. Antiglare Devices .....	36
2.2.15. Cues to Depth .....	36

2.2.16.	Working Distance .....	36
2.2.17.	Depth of Field .....	37
2.2.18.	Structure of the Specimen .....	37
2.2.19.	Morphology of the Specimen .....	38
2.2.20.	Information about the Specimen .....	38
2.2.21.	Experimentation .....	39
2.2.22.	Preparation of the Specimen .....	39
2.2.23.	Behavior of the Specimen .....	39
2.2.24.	Photomicrography .....	39
2.3.	Summary .....	40

### 3. Simple and Compound Microscopes

3.1.	The Limiting Resolution .....	41
3.2.	Simple Microscope: One Lens System .....	42
3.3.	Compound Microscope: Two or More Lens Systems .....	43
3.4.	Stereo Compound Microscopes .....	44
3.5.	The Biological Microscope .....	49
3.5.1.	Attitudes .....	49
3.5.2.	Experience .....	50
3.5.3.	Learning and Teaching .....	50
3.5.4.	Resolving Power .....	50
3.5.5.	Resolution .....	51
3.5.6.	Contrast .....	51
3.5.7.	Corrections for Aberrations .....	52
3.5.8.	Cleanliness .....	53
3.5.9.	Depth of Focus .....	53
3.5.10.	Focusing .....	53
3.5.11.	Illumination .....	53
3.5.12.	Radiation .....	54
3.5.13.	Anisotropy .....	56
3.5.14.	Magnification .....	56
3.5.15.	Field of View .....	56
3.5.16.	Antiglare .....	57
3.5.17.	Cues to Depth .....	57
3.5.18.	Depth of Field .....	58
3.5.19.	Working Distance .....	58
3.5.20.	Structure of the Specimen .....	58
3.5.21.	Morphology of the Specimen .....	58
3.5.22.	Information about the Specimen .....	59
3.5.23.	Experimentation .....	59
3.5.24.	Preparation of the Specimen .....	60
3.5.25.	Behavior of the Specimen .....	60
3.5.26.	Photomicrography .....	60
3.6.	Summary .....	61

**4. Compound Microscopes Using Reflected Light**

4.1. Study of Surfaces by Reflected Light .....	63
4.2. Resolving Power .....	64
4.3. Contrast .....	68
4.4. Corrections for Aberrations .....	69
4.5. Cleanliness of the Specimen .....	70
4.6. Depth of Focus .....	70
4.7. Role of Focus .....	70
4.8. Illumination .....	71
4.9. Radiation .....	74
4.10. Magnification .....	77
4.11. Field of View .....	79
4.12. Problems of Glare .....	79
4.13. Cue to Depth .....	80
4.14. Depth of Field .....	81
4.15. Working Distance .....	81
4.16. Study of Structure .....	82
4.17. Study of Morphology .....	84
4.18. Information about the Specimen .....	84
4.19. Experimentation .....	84
4.20. Behavior of the Specimen .....	85
4.21. Preparation of the Specimen .....	85
4.22. Photomicrographic Techniques .....	88
4.23. Summary .....	88

**5. Microscopy with Polarized Light**

5.1. The Overhead Projector .....	91
5.2. Anisotropy .....	93
5.3. Numerical Aperture and Interference Figures .....	95
5.4. Resolution: Interaction of Specimen and Polarized Light ...	97
5.5. Contrast: Michel-Lévy Interference Chart .....	99
5.5.1. Retardation Plates .....	101
5.5.2. Thickness of the Specimen .....	102
5.6. Correction for Aberrations Due to Strain .....	103
5.7. Cleanliness: Freedom from Interference Films .....	103
5.8. Depth of Focus .....	104
5.9. Focus .....	104
5.10. Illumination .....	104
5.11. Radiation .....	105
5.12. Magnification .....	106
5.13. Field of View of an Interference Figure .....	106
5.14. Glare .....	106
5.15. Cues to Depth .....	107
5.16. Depth of Field .....	107
5.17. Working Distance .....	107

5.18.	Structure of the Specimen .....	108
5.19.	Morphology of the Specimen .....	108
5.20.	Information about the Specimen .....	108
5.21.	Experimentation .....	108
5.22.	Behavior of the Specimen .....	109
5.23.	Preparation of the Specimen .....	109
5.24.	Photography .....	109
5.25.	Summary .....	109
<b>6.</b>	<b>The Microscopical Properties of Fibers</b>	
6.1.	Introduction .....	113
6.2.	The Eight Optical Properties of Fibers .....	114
6.3.	Molecular Anisotropy .....	128
6.4.	Anisotropy: Molecular Orientation and Organization .....	131
6.5.	Transparent Sheets, Foils, and Films .....	133
6.6.	Summary .....	134
<b>7.</b>	<b>Microscopical Properties of Crystals</b>	
7.1.	Structural Classifications .....	139
7.2.	Morphology .....	139
7.3.	Miller Indices .....	141
7.4.	Isomorphism .....	142
7.5.	Skeletal Morphology .....	143
7.6.	Isotropic System .....	145
7.7.	Uniaxial Crystals .....	147
7.8.	Biaxial Crystals .....	151
7.9.	Optical Properties of the Liquid-Crystalline or Mesomorphic State .....	152
7.10.	Thermotropic, Mesomorphic, Single Compounds .....	156
7.11.	Kinds of Morphology (Texture) .....	158
	7.11.1. Homeotropic Textures .....	158
	7.11.2. Focal Conic Textures .....	159
	7.11.3. Other Smectic Textures .....	161
	7.11.4. Nematic Textures .....	161
	7.11.5. Cholesteric Textures .....	162
7.12.	Lyotropic Phases .....	163
7.13.	Summary .....	166
<b>8.</b>	<b>Photomicrography</b>	
8.1.	Photomicrograph: Image Produced by Light, Electrons, or X-Rays .....	169
8.2.	Two Attitudes: Artistic versus Scientific .....	169
8.3.	Experience: Records of Negatives .....	171

- 8.4. Imagination ..... 171
- 8.5. Resolving Power ..... 171
- 8.6. Resolution by Photomacrographic Lenses ..... 173
- 8.7. Contrast: Nature of Photosensitive Materials ..... 176
- 8.8. Corrections for Aberrations ..... 179
- 8.9. Cleanliness in the Darkroom ..... 179
- 8.10. Depth of Focus ..... 180
- 8.11. Focusing ..... 181
- 8.12. Illumination ..... 182
- 8.13. Spectrum of Effective Radiation ..... 182
- 8.14. Anisotropy ..... 183
- 8.15. Useful Magnification in Photomacrographs ..... 183
- 8.16. Field of View ..... 185
- 8.17. Summary ..... 185

**9. Contrast: Phase, Amplitude, and Color**

- 9.1. Contrast: Colorless and Color ..... 189
- 9.2. Interference: Destructive and Constructive ..... 189
- 9.3. Phase-Amplitude Contrast ..... 192
- 9.4. Phase-Amplitude Contrast in Determining  
Refractive Index ..... 195
- 9.5. Variable Phase-Amplitude Microscopy ..... 197
- 9.6. Modulation-Contrast Microscopy ..... 199
- 9.7. Dispersion Staining ..... 202
- 9.8. Special Accessories ..... 206
- 9.9. The Schlieren Microscope ..... 207
- 9.10. Summary ..... 208

**10. Interferometry in Microscopy**

- 10.1. Interference of Two Whole Beams ..... 211
- 10.2. Kinds of Interference Microscopes ..... 213
  - 10.2.1. Single Microscopes ..... 213
  - 10.2.2. Double Microscopes ..... 217
- 10.3. Applications to Highly Birefringent Specimens ..... 218
- 10.4. Summary ..... 218

**11. Microscopical Stages**

- 11.1. Introduction ..... 221
- 11.2. Micromanipulators ..... 226
- 11.3. Heatable Stages ..... 227
  - 11.3.1. Hot Stages with Long Working Distances ..... 228
  - 11.3.2. Hot Stages with Short Working Distances ..... 231
  - 11.3.3. Hot-Wire Stage ..... 233

11.4.	Very Hot Stage .....	236
11.5.	Cold Stages .....	236
11.6.	Other Special Cells and Cuvettes .....	237
11.7.	Summary .....	239
<b>12.</b>	<b>Transmission Electron Microscopy</b>	
12.1.	Electron Microscopes .....	243
12.2.	Electron Lenses .....	246
12.3.	Resolving Power .....	248
12.4.	Resolution .....	250
12.5.	Contrast .....	251
12.6.	Aberrations .....	252
12.7.	Cleanliness .....	253
12.8.	Depth of Focus .....	253
12.9.	Focus .....	254
12.10.	Illumination .....	254
12.11.	Anisotropy .....	255
12.12.	Useful Magnification .....	255
12.13.	Field of View .....	255
12.14.	Artifacts .....	256
12.15.	Cues to Depth .....	256
12.16.	Thickness of the Specimen .....	257
12.17.	Depth of Field .....	259
12.18.	Structure of the Specimen .....	259
12.19.	Morphology of the Specimen .....	259
12.20.	Information about the Specimen .....	260
12.21.	Experimentation .....	261
12.22.	Preparation of the Specimen .....	261
12.23.	Electron Micrography .....	264
12.24.	Scanning Transmission Electron Microscope (STEM) .....	267
12.25.	Summary .....	269
<b>13.</b>	<b>Scanning Electron Microscopy</b>	
13.1.	Introduction .....	273
13.2.	Resolving Power .....	275
13.3.	Resolution .....	276
13.4.	Contrast .....	276
13.5.	Aberrations .....	279
13.6.	Cleanliness .....	279
13.7.	Depth of Focus .....	281
13.8.	Focusing .....	281
13.9.	Illumination .....	282
13.10.	Radiation .....	283
13.11.	Useful Magnification .....	286

13.12.	Field of View .....	287
13.13.	Noise .....	287
13.14.	Cues to Depth .....	288
13.15.	Working Distance .....	289
13.16.	Depth of Field .....	289
13.17.	Structure .....	289
13.18.	Morphology .....	293
13.19.	Information .....	293
13.20.	Dynamic Experimentation .....	293
13.21.	Behavior of the Specimen .....	294
13.22.	Preparation of the Specimen .....	295
13.23.	Photomicrography .....	296
13.24.	Summary .....	297

**14. Field-Emission Microscopes**

14.1.	Introduction .....	299
14.2.	Attributes Contributing to Visibility by Field-Emission Microscopy .....	302
14.2.1.	Thought, Memory, and Imagination .....	302
14.2.2.	Resolving Power .....	302
14.2.3.	Resolution .....	303
14.2.4.	Contrast .....	303
14.2.5.	Aberrations .....	303
14.2.6.	Cleanliness .....	304
14.2.7.	Depth of Focus .....	304
14.2.8.	Illumination .....	304
14.2.9.	Radiation .....	305
14.2.10.	Magnification .....	305
14.2.11.	Field of View .....	306
14.2.12.	Artifacts .....	306
14.2.13.	Working Distance .....	306
14.2.14.	Depth of Field .....	306
14.2.15.	Structure .....	306
14.2.16.	Morphology .....	307
14.2.17.	Information .....	307
14.2.18.	Experiments .....	307
14.2.19.	Behavior .....	308
14.2.20.	Preparation of the Specimen .....	308
14.3.	Summary .....	309

**15. X-Ray Microscopy**

15.1.	X-Rays .....	311
15.2.	Condenser Lenses .....	312
15.3.	X-Ray Holography .....	316
15.4.	Summary .....	318

## 16. Acoustic Microscopy

16.1.	Ultrasound Waves from Microspecimens .....	319
16.2.	Acoustic Microscopes: SLAM versus SAM .....	319
16.2.1.	Theoretical Resolving Power of the Acoustic Microscope .....	324
16.2.2.	Practical Resolution of the Acoustic Microscope .....	324
16.2.3.	Contrast in Acoustic Images .....	325
16.2.4.	Aplanatic Lenses in SAM .....	325
16.2.5.	Cleanliness in Acoustic Microscopes .....	326
16.2.6.	Depth of Focus in SAM .....	326
16.2.7.	Focusing SAM .....	326
16.2.8.	Acoustic Radiation .....	326
16.2.9.	Magnification .....	327
16.2.10.	Field of View .....	328
16.2.11.	Stray Acoustic Radiation .....	328
16.2.12.	Three-Dimensional Aspect of SLAM .....	328
16.2.13.	Thickness of the Specimen .....	329
16.2.14.	Working Distance .....	329
16.2.15.	Structure of the Specimen .....	329
16.2.16.	Anisotropy .....	330
16.2.17.	Morphology of the Specimen .....	330
16.2.18.	Information about the Acoustical Image .....	330
16.2.19.	Experiments with the Specimen .....	330
16.2.20.	Behavior of the Specimen .....	331
16.2.21.	Preparation of the Specimen .....	331
16.2.22.	Photomicrography .....	332
16.3.	Summary .....	332
	<i>References</i> .....	335
	<i>Author Index</i> .....	353
	<i>Subject Index</i> .....	357
