

## CONTENTS

Foreword to the 1968 Russian Edition . . . . .	1
Foreword to the 1961 Russian Edition . . . . .	3
Notation . . . . .	5
Introduction . . . . .	7
CHAPTER 1.	
Static (Galvanometric) Method of Studying Processes Occurring during the Bombardment of a Solid by Atomic Particles . . . . .	11
§1. Brief review of investigations into secondary emission under the influence of positive alkali ions . . . . .	11
§2. Use of the galvanometric method for studying secondary processes under relatively clean surface conditions . . . . .	19
§3. Influence of adsorbed films on secondary processes . . . . .	24
§4. Migration of adsorbed particles on a metal surface . . . . .	26
§5. Energy distribution of secondary electrons and ions and limiting secondary-ion energies . . . . .	29
§6. Composition of secondary ion emission . . . . .	30
CHAPTER 2.	
Dynamic (Oscillographic) Method of Investigation	
§1. Fundamental principles of the inertia-free method of studying secondary ion and electron processes . . . . .	33
§2. Oscillographic method of studying phenomena of adsorption on a metal surface . . . . .	37
§3. Oscillographic method of determining the heat of evaporation of atoms and ions . . . . .	44
§4. Oscillographic method of determining the coefficient of ionization on the surface of an incandescent metal . . . . .	48
§5. Method of double modulation . . . . .	51
§6. Use of the double-modulation method for studying secondary processes in pure metals . . . . .	54
§7. Double-modulation study of secondary processes at low target temperatures . . . . .	59
§8. Double-modulation study of secondary processes at high target temperatures . . . . .	62

<b>CHAPTER 3.</b>		
Ion Bombardment of Incandescent Metals . . . . .		69
§ 1. Method of studying secondary processes on incandescent metals . . . . .		69
§ 2. Temperature and energy dependence of the components of secondary ion emission . . . . .		71
§ 3. Temperature and energy dependence of the coefficient of positive-ion neutralization on a metal surface . . . . .		73
§ 4. Dependence of the ion-scattering coefficient on the nature of the ion and the target material . . . . .		76
§ 5. Diffusion component of secondary ion emission from incandescent metals . . . . .		78
§ 6. Scattering of alkali ions by the surface of tungsten and molybdenum single crystals . . . . .		80
<b>CHAPTER 4.</b>		
Interaction of Slow Ions with a Solid Surface . . . . .		85
§ 1. Method of investigation when working with slow ions . . . . .		86
§ 2. Energy spectra of secondary ions on bombarding metals with slow ions . . . . .		91
§ 3. Energy dependence of secondary-ion emission coefficients . . . . .		96
§ 4. Limitation of the escape of secondary ions by sorption forces on the surface of a metal . . . . .		100
<b>CHAPTER 5.</b>		
Angular Relationships of Secondary Ion Emission . . . . .		105
§ 1. Brief review of investigations into the angular distribution of secondary ion emission . . . . .		105
§ 2. Static and dynamic methods of studying the angular and energy distributions of secondary ions . . . . .		111
§ 3. Angular distribution of ions scattered by a metal surface . . . . .		116
§ 4. Dependence of the coefficient of secondary ion emission and its components on the incident angle of the primary ions . . . . .		121
§ 5. Dependence of the energy spectra on the angle of incidence of the primary and the escape angle of the secondary ions . . . . .		122
§ 6. Angular laws governing the scattering of ions by the surface of a single crystal . . . . .		137
<b>CHAPTER 6.</b>		
Secondary Processes Under the Influence of Bombardment by Inert-Gas Ions . . . . .		141
§ 1. Brief review of investigations into secondary emission under the influence of gas ions . . . . .		141
§ 2. Influence of the state of a metallic surface on the potential emission of electrons . . . . .		154
§ 3. Comparative study of electron emission from metals under the influence of inert-gas and alkali ions . . . . .		159
§ 4. Dependence of the potential emission of electrons on the temperature and work function of the target . . . . .		164

§ 5. Influence of the mass of an ion on ion-electron emission (isotopic effect) . . . . .	168
§ 6. Energy dependence of electron emission from metals under the influence of inert-gas ions . . . . .	171
§ 7. Electron emission in the bombardment of tungsten single crystals by Ar <sup>+</sup> ions . . . . .	174
 CHAPTER 7.	
Ion and Electron Emission on Bombarding Films of Variable Density with Positive Ions . . . . .	177
§ 1. Use of the double-modulation method for studying secondary processes in films . . . . .	177
§ 2. Secondary emission in the bombardment of metallic films with alkali ions . . . . .	179
§ 3. Secondary emission in the bombardment of metallic films with inert-gas ions . . . . .	187
§ 4. Study of secondary processes occurring during the bombardment of dielectric films with positive ions . . . . .	195
§ 5. Secondary emission from dielectric films on bombarding with inert-gas ions . . . . .	203
§ 6. Mass-spectrometric study of the secondary emission of negative ions from thin metallic and dielectric films . . . . .	208
 CHAPTER 8.	
Interaction of Neutral Atoms with a Solid Surface . . . . .	219
§ 1. Brief review of investigations into the interaction of neutral atoms with a solid surface . . . . .	219
§ 2. Study of the properties of the neutral component of secondary emission arising in the ion bombardment of a solid . . . . .	223
§ 3. Comparative study of the secondary emission of metals and metallic films under the influence of alkali atoms and ions . . . . .	226
§ 4. Secondary electron emission of metals under the influence of inert-gas atom and ion bombardment . . . . .	232
 CHAPTER 9.	
Sputtering of a Solid with Ion Beams . . . . .	245
§ 1. Brief review of investigations into cathodic sputtering . . . . .	245
§ 2. Method of studying metal sputtering . . . . .	253
§ 3. Influence of the contamination of a solid surface on the sputtering process . . . . .	257
§ 4. Sputtering of solids under pure surface conditions . . . . .	260
 CHAPTER 10.	
Secondary Electron-Electron Emission . . . . .	265
§ 1. Brief review of experimental and theoretical investigations into secondary electron-electron emission . . . . .	265
§ 2. Dynamic method of studying secondary electron-electron emission . . . .	274
§ 3. Study of the complete energy spectrum of secondary electrons . . . .	277

## CONTENTS

§ 4. Angular dependence of the energy spectrum of secondary electrons . . . . .	280
§ 5. Study of secondary electron-electron emission from metals in various states of aggregation . . . . .	283
<b>CHAPTER 11.</b>	
Theory of Certain Phenomena Taking Place in the Collision of Atomic Particles with a Solid Surface . . . . .	289
§ 1. Theory of ion-electron emission . . . . .	289
§ 2. Mechanism of electron emission from solids under the action of atomic particles . . . . .	296
§ 3. Theory of the reflection of atomic particles from a solid surface . . . . .	319
§ 4. Energy balance when ions strike a metallic surface . . . . .	337
§ 5. Calculation of the inertial component of secondary ion-ion emission from metallic targets . . . . .	342
<b>APPENDIX . . . . .</b>	349
<b>REFERENCES . . . . .</b>	355
