

# Contents

<b>1. Introduction . . . . .</b>	<b>1</b>
<b>2. AC-Stark Shift of Atomic Levels . . . . .</b>	<b>10</b>
2.1 Single-Level Quantum System . . . . .	11
2.2 The Linear Stark Shift for a Hydrogen Atom in an Oscillating Field . . . . .	13
2.3 Atomic Response to an External Oscillating Field . . . . .	14
2.4 The Perturbation of Non-Degenerate Atomic States in a Weak Field . . . . .	16
2.5 Perturbation of the Hydrogen Atom Spectrum in a Strong Field . . . . .	21
2.6 Perturbation of Rydberg States in a Weak Field . . . . .	24
2.7 Stark Effect in a Super-Atomic Radiation Field . . . . .	28
2.8 The Stark Atom . . . . .	32
2.9 AC-Stark Shift in Negative Ions . . . . .	34
2.10 Dynamical Stark Resonance . . . . .	36
2.11 AC-Stark Shift and Ionization . . . . .	39
<b>3. Ionization of a Particle with a Short-Range Potential Well . . . . .</b>	<b>41</b>
3.1 The Keldysh–Faisal–Reiss Approximation . . . . .	42
3.1.1 The Keldysh Approach . . . . .	43
3.1.2 The Reiss Approach . . . . .	44
3.1.3 Other <i>S</i> -Matrix Approaches . . . . .	46
3.1.4 Above-Threshold Ionization in Keldysh-Type Approaches . . . . .	47
3.2 Model One-Particle Potentials of Negative Ions . . . . .	48
3.2.1 Multiphoton Detachment of an Electron from $H^-$ . . . . .	49
3.2.2 Multiphoton Detachment of Electrons from Complex Negative Ions . . . . .	52
3.3 Residual Interaction Between Electrons . . . . .	55
3.4 Removal of Internal Electrons from Negative Ions . . . . .	57
3.5 Numerical Solutions for the Strong-Field Case . . . . .	58
3.6 Experiments on Multiphoton Detachment of Negative Ions . . . . .	60
3.6.1 Integral Rates and Cross Sections . . . . .	60
3.6.2 Angular Distributions of Electrons . . . . .	63
3.6.3 AC-Stark Shift of Photodetachment Thresholds . . . . .	64

<b>4. Tunneling Ionization of Atoms . . . . .</b>	<b>66</b>
4.1 Landau–Dykhne Adiabatic Approximation . . . . .	66
4.2 Rates of Tunneling Ionization for Atoms and Ions . . . . .	68
4.3 Energy Spectrum of Electrons . . . . .	70
4.3.1 Linearly Polarized Radiation . . . . .	70
4.3.2 Circularly Polarized Radiation . . . . .	70
4.3.3 Non-Monochromatic Radiation . . . . .	71
4.3.4 Ponderomotive Acceleration of Electrons . . . . .	71
4.3.5 Angular Distributions of Ejected Electrons . . . . .	73
4.4 Above-Barrier Decay of Atoms . . . . .	74
4.5 Experimental Data and Interpretation . . . . .	76
4.6 Relativistic Effects . . . . .	78
<b>5. Direct (Nonresonant) Multiphoton Ionization of Atoms . . . . .</b>	<b>81</b>
5.1 Multiphoton Ionization of Hydrogen Atom . . . . .	83
5.1.1 Method of Sturmian Green's Functions . . . . .	84
5.1.2 Other Methods for Calculation of Multiphoton Cross Sections . . . . .	87
5.1.3 WKB Approximation for Multiphoton Ionization . . . . .	90
5.1.4 Experimental Multiphoton Cross Sections of Direct Ionization of Hydrogen Atom . . . . .	94
5.1.5 Polarization Dependence of Multiphoton Cross Sections . . . . .	94
5.1.6 Photoelectron Angular Distributions . . . . .	97
5.2 Alkali Atoms . . . . .	98
5.2.1 Perturbation Theory Calculations of Multiphoton Cross Sections . . . . .	99
5.2.2 Experimental Multiphoton Cross Sections . . . . .	100
5.2.3 Polarization Dependence of Multiphoton Cross Sections . . . . .	102
5.2.4 Dependence of Multiphoton Cross Sections on the Electron Ejection Angle . . . . .	103
5.3 Atoms with Many Valence Electrons . . . . .	106
5.3.1 Structure of Many-Electron Atoms . . . . .	107
5.3.2 Experimental Multiphoton Ionization Cross Sections for Alkaline-Earth Atoms . . . . .	107
5.3.3 Experimental and Theoretical Multiphoton Cross Sections for Atoms of Noble Gases . . . . .	109
5.3.4 Nonperturbational Numerical Calculations . . . . .	112
5.3.5 Residual Interactions Between Valence Electrons . . . . .	113
5.3.6 Polarization Dependence of Multiphoton Cross Sections . . . . .	115
5.3.7 Electron Angular Distributions . . . . .	116

<b>6. Resonance-Enhanced Ionization . . . . .</b>	<b>118</b>
6.1 Resonance-Enhanced Ionization in a Weak Field . . . . .	119
6.2 Field Effects in Resonance-Enhanced Ionization . . . . .	120
6.2.1 Hydrogen Atom . . . . .	120
6.2.2 Alkali Atoms . . . . .	122
6.2.3 Atoms of Noble Gases . . . . .	123
6.2.4 Rabi Oscillations in Resonance Transitions . . . . .	124
6.2.5 Non-Monochromatic Fields . . . . .	127
6.3 Angular Distributions of Photoelectrons in Resonance-Enhanced Multiphoton Ionization of Atoms . . . . .	128
6.4 Exotic Resonances . . . . .	130
6.4.1 Quadrupole Resonances . . . . .	131
6.4.2 Forbidden Resonances . . . . .	132
6.4.3 Non-Resonant Excitation of Intermediate Resonances . . . . .	134
6.5 Resonances with Autoionizing States . . . . .	135
6.5.1 Structure of Autoionizing States . . . . .	136
6.5.2 Multiphoton Ionization via Autoionizing States . . . . .	137
6.5.3 Excitation of an Autoionizing State by a Weak Electromagnetic Field . . . . .	137
6.5.4 Excitation of an Autoionizing State by a Strong Electromagnetic Field . . . . .	140
6.5.5 Experimental Studies . . . . .	142
6.6 Further Experiments . . . . .	145
 <b>7. Above-Threshold Ionization of Atoms . . . . .</b>	<b>147</b>
7.1 The Nature of Above-Threshold Multiphoton Ionization . . . . .	147
7.2 Compound Matrix Elements for Processes of Kth and ( $K + 1$ )th Orders . . . . .	148
7.3 WKB Estimates of Dipole Matrix Elements . . . . .	150
7.4 A Critical Field . . . . .	152
7.5 Two-Photon Above-Threshold Ionization of a Hydrogen Atom by Radiation of Less than Critical Intensity . . . . .	153
7.6 Multiphoton Above-Threshold Ionization of a Hydrogen Atom by Radiation of Less than Critical Intensity . . . . .	156
7.7 Experimental Aspects. Parameters that Influence the Photoelectron Spectra . . . . .	157
7.7.1 Non-Uniform Space-Time Distribution of the Laser Radiation . . . . .	158
7.7.2 Laser Pulse Length . . . . .	159
7.7.3 The Ponderomotive Force in a Long Laser Pulse . . . . .	161
7.7.4 Charge Density . . . . .	161
7.7.5 Laser Intensity . . . . .	161
7.8 Experimental Data for $I < I_c$ . . . . .	162

7.8.1	Appearance Intensity . . . . .	162
7.8.2	Nonlinear Power for Electron Production in Various Above-Threshold Maxima . . . . .	162
7.8.3	Ratio of the Rates for $(K + 1)$ -Photon and K-Photon Processes . . . . .	162
7.8.4	Electron Angular Distributions in Above- Threshold Maxima. Comparison to Threshold Ionization Peaks Predictions . . . . .	163
7.9	Theoretical Description of Above-Threshold Ionization at $I < I_c$ . . . . .	165
7.10	Experimental Data for $I > I_c$ and Their Interpretation . . . . .	168
7.10.1	Electron Energy Spectra . . . . .	168
7.10.2	Electron Angular Distributions . . . . .	170
7.10.3	Dependence of Electron Energy Spectra on the Laser Polarization . . . . .	171
7.11	Theoretical Interpretation of Electron Energy Spectra for $I > I_c$ . . . . .	172
7.11.1	Predictions of the Keldysh–Reiss Approach . . . . .	173
7.11.2	Role of the Atomic Potential . . . . .	174
7.11.3	Numerical Calculations . . . . .	175
7.11.4	Method of Essential States . . . . .	176
7.11.5	Method of Multichannel Above-Threshold Ionization . . . . .	178
7.11.6	Coulomb–Volkov Approximation . . . . .	179
7.12	Above-Threshold Ionization by Ultra-Short Laser Pulses . . . . .	179
7.13	Other Effects . . . . .	181
7.13.1	Saturation of Above-Threshold Ionization . . . . .	181
7.13.2	Tunneling Limiting Case . . . . .	182
7.13.3	Nonlinear Photodetachment of an Electron from a Negative Ion . . . . .	182
7.13.4	Excitation of Higher Harmonics . . . . .	184
8.	<b>Multiple Ionization of Atoms</b> . . . . .	185
8.1	Mechanisms of Multiple Ionization . . . . .	186
8.2	Stepwise Production of Multiply Charged Ions . . . . .	192
8.2.1	Doubly Charged Ions of Alkaline-Earth Atoms . . . . .	192
a)	Method of Electron Spectroscopy . . . . .	192
b)	Method of Resonances in the Frequency Dependence of Yields of $A^+$ and $A^{2+}$ Ions . . . . .	196
8.2.2	Multiply Charged Ions of Noble Gases . . . . .	201
8.2.3	Theoretical Description of the Stepwise Production of Multiply Charged Ions . . . . .	209
a)	Rate Equations . . . . .	210
b)	Multiphoton Ionization Cross Sections of Multiply Charged Ions . . . . .	212
c)	Production of an Ion in an Excited State . . . . .	213

8.2.4 Principal Conclusions on Stepwise Ionization . . . . .	217
8.3 Simultaneous Detachment of Several Electrons . . . . .	218
8.3.1 Experimental Data . . . . .	218
8.3.2 Theoretical Description of Simultaneous Detachment of Several Electrons . . . . .	223
8.3.3 General Conclusions on Simultaneous Detachment of Electrons . . . . .	228
8.4 Detachment of Electrons from Inner Shells of Atoms and Ions . . . . .	229
8.5 Multiple Ionization of Atoms in the Tunneling Limit . . . . .	237
8.6 Production of Multiply Charged Ions in Laser Fields of Subatomic and Superatomic Intensity . . . . .	241
8.6.1 Above-Barrier Ionization . . . . .	242
8.6.2 Models of Multiple Ionization by Subatomic and Superatomic Fields . . . . .	247
a) Thomas-Fermi Model . . . . .	247
b) The Black Body Model . . . . .	249
c) The Model of Independent Electrons . . . . .	249
d) Vaporization Model of Multiple Ionization . . . . .	251
8.7 Summary . . . . .	252
<b>9. Ionization by Fields of Subatomic Strength . . . . .</b>	<b>254</b>
9.1 Definition of an Atomic Field . . . . .	254
9.2 Ionization of Atoms and Atomic Ions at $F \lesssim F_a$ and $\gamma > 1$ . . . . .	255
9.2.1 AC-Stark Shift of Highly Excited Levels . . . . .	256
9.2.2 Role of Ponderomotive Forces . . . . .	258
9.2.3 Ionization Broadening of Resonances . . . . .	258
9.2.4 Role of the Small Duration of the Radiation Pulse . . . . .	259
9.2.5 Ionization Rates in Fields of Subatomic Strength . . . . .	260
9.3 Above-Barrier Decay of an Atom at $F > F_a$ . . . . .	262
<b>10. Atoms in Superintense Laser Fields . . . . .</b>	<b>267</b>
10.1 Qualitative Picture of Atomic Stabilization . . . . .	267
10.2 Keldysh-Reiss Approach for a Superintense Field . . . . .	268
10.3 Numerical Calculations of Ionization Rates . . . . .	271
10.4 The Kramers-Henneberger Method . . . . .	274
10.5 Numerical Solutions of Newton Equations . . . . .	278
10.6 Stabilization of a Rydberg Atom in a Superintense Field . . . . .	281
10.7 Stark Atom . . . . .	285
10.8 Collapse and Revival of a Population Inversion in a Superintense Field . . . . .	286
<b>11. Related Phenomena . . . . .</b>	<b>291</b>
11.1 Microwave Ionization of Atoms . . . . .	291
11.2 Multiphoton Ionization of Polarized Atoms . . . . .	293
11.3 Nonlinear Ionization by Non-Classical Light . . . . .	294

11.4 Excitation of High Optical Harmonics . . . . .	297
11.4.1 Experimental Data . . . . .	298
11.4.2 Theoretical Description . . . . .	298
11.4.3 Nonlinear Light Scattering . . . . .	300
<b>References . . . . .</b>	<b>303</b>
<b>Subject Index . . . . .</b>	<b>317</b>
