CONTRIBUTORS viii

Theory of Electron–Atom Scattering in a Radiation Field

Leonard Rosenberg

I. Introduction 1
II. Bremsstrahlung 6
III. Asymptotic States 14
IV. Scattering Theory 23
V. Generalized Low-Frequency Approximations 37
VI. Concluding Remarks 49
References 50

Positron–Gas Scattering Experiments

Talbert S. Stein and Walter E. Kauppila

I. Introduction 53
II. Experimental Techniques for Total Cross-Section Measurements 55
III. Total Cross-Section Results 64
IV. Differential Scattering Cross Sections 84
V. Inelastic Scattering Investigations 86
VI. Resonance Searches 91
VII. Possible Future Directions for Positron Scattering Experiments 92
References 93

Nonresonant Multiphoton Ionization of Atoms

J. Morellec, D. Normand, and G. Petite

I. Introduction 98
II. The Theory of Multiphoton Ionization 101
III. Absolute Measurements of Multiphoton Ionization Cross Sections 119

IV. Experimental Results: Comparison with Theory 133
V. Destructive Interference Effects 140
VI. New Trends 151
VII. Conclusion 157
References 160

Classical and Semiclassical Methods in Inelastic Heavy-Particle Collisions

A. S. Dickinson and D. Richards

I. Introduction 166
II. Angle–Action Variables 167
III. Rotational Excitation 170
IV. Uniform Approximations 183
V. Semiclassical Theories 186
VI. Conclusions 198
References 200

Recent Computational Developments in the Use of Complex Scaling in Resonance Phenomena

B. R. Junker

I. Introduction 208
II. Gamow–Siegert States 210
III. Complex-Coordinate Theorems and Properties of the Wave Functions 214
IV. Variational Principle 227
V. Variational Calculations 229
VI. Many-Body Theories 243
VII. Nondilation Analytic Potentials 244
VIII. Complex Stabilization Method 247
IX. Discussion 256
References 260

Direct Excitation in Atomic Collisions: Studies of Quasi-One-Electron Systems

N. Andersen and S. E. Nielsen

I. Introduction 266
II. Theoretical Models 271
III. Experimental Techniques 279
IV. Results and Discussion 287
V. Conclusions 303
References 305

Model Potentials in Atomic Structure

A. Hibbert

I. Introduction 309
II. Simple Semiempirical Model Potentials 311
III. Potentials Based on Hartree–Fock Formalism 317
IV. Core Polarization 327
V. Relativistic Model Potentials 332
VI. Conclusions 336
References 338

Recent Developments in the Theory of Electron Scattering by Highly Polar Molecules

D. W. Norcross and L. A. Collins

I. Introduction 341
II. General Formulation 350
III. Approaches and Approximations 360
IV. Applications 377
V. Conclusion 390
Nomenclature 392
References 393

Quantum Electrodynamic Effects in Few-Electron Atomic Systems

G. W. F. Drake

I. Introduction 399
II. One-Electron Systems 401
III. Light Muonic Systems 424
IV. Two-Electron Systems 426
V. Few-Electron Systems 446
VI. Concluding Remarks and Suggestions for Future Work 454
References 456
