Positronium—Its Formation and Interaction with Simple Systems

J. W. Humberston

I.	Introduction	1
II.	Positronium Formation in Positron–Atom Scattering	2
III.	The Interaction of Positronium with Simple Systems	22
IV.	Concluding Remarks	33
	References	34

Experimental Aspects of Positron and Positronium Physics

T. C. Griffith

I.	Introduction	37
II.	Annihilation Spectra for Positrons in Gases	39
III.	Cross-Section Measurements with Positron Beams	52
	References	72

Doubly Excited States, Including New Classification Schemes

C. D. Lin

I.	Introduction	77
II.	Analysis of Radial and Angular Correlations	81
III.	Classification of Doubly Excited States	96
IV.	Solution of the Two-Electron Schrödinger Equation in Hyperspherical Coordinates	109
V.	Body-Frame Analysis of Correlation Quantum Numbers	115
VI.	Effects of Strong Electric Fields on Resonance Structures in H^- Photodetachment	125
VII.	Doubly Excited States of Multielectron Atoms	131
VIII.	Concluding Remarks and Perspectives	138
	References	140

Measurements of Charge Transfer and Ionization in Collisions Involving Hydrogen Atoms

H. B. Gilbody

I. Introduction 143
II. Outline of Experimental Methods 144
III. Charge Transfer 152
IV. Ionization 182
V. Cross Sections for Electron Removal from Hydrogen Atoms in Collisions with Positive Ions 189
References 192

Electron–Ion and Ion–Ion Collisions with Intersecting Beams

K. Dolder and B. Peart

I. Introduction 197
II. Notes on Experimental Techniques 199
III. Ionization of Positive Atomic Ions by Electron Impact 201
IV. Measurements of Dielectronic Recombination 213
V. Measurements of Electron-Impact Excitation of Positive Ions 215
VI. Scattering of Electrons by Ions 222
VII. Collisions between Electrons and Negative Ions 224
VIII. Collisions between Electrons and Molecular Ions 226
IX. Collisions between Positive and Negative Ions 228
X. Collisions between Positive Ions 232
References 237

Electron Capture by Simple Ions

Edward Pollack and Yukap Hahn

I. Introduction 243
II. Theory 244
III. Experimental Background 261
IV. Typical Studies 266
V. Ion–Molecule Charge-Exchange Collisions: $He^+ + H_2$ 273
VI. Ion–Molecule Collisions: Other Systems 293
VII. Electron-Transfer-Excitation Collisions 305
References 310

Relativistic Heavy-Ion–Atom Collisions

R. Anholt and Harvey Gould

I. Introduction 315
II. Experiments 317

III. Ionization Processes 324
IV. Electron-Capture Processes 345
V. Collisions in Solid Targets 357
VI. X-Ray Continuum Processes 369
VII. Ultrarelativistic Collisions 374
VIII. Relativistic Few-Electron Ions in Quantum Electrodynamics Experiments 377
IX. Conclusions 379
References 381

Continued-Fraction Methods in Atomic Physics

S. Swain

I. Introduction 387
II. Continued-Fraction Solutions to Linear Equations 389
III. Perturbation Theories 398
IV. The Density Matrix and Rate Equations 415
V. Conclusions 427
Appendix: Derivation of the Continued-Fraction Expansion of a Determinant 427
