Studies of Electron Excitation of Rare-Gas Atoms into and out of Metastable Levels Using Optical and Laser Techniques

Chun C. Lin and L. W. Anderson

I.	Introduction	1
II.	Excitation out of the Ground Level into Nonmetastable Levels	2
III.	Excitation out of the Ground Level into Metastable Levels	12
IV.	Excitation out of Metastable Levels	23
V.	Conclusion	27
	Acknowledgments	30
	References	30

Cross Sections for Direct Multiphoton Ionization of Atoms

*M. V. Ammosov, N. B. Delone, M. Yu Ivanov, I. I. Bondar,
and A. V. Masalov*

I.	Introduction	34
II.	Methods of Measuring the Principal Quantities That Characterize Multiphoton Ionization of Atoms	45
III.	The Procedure for Measuring the Quantities Needed to Find the Multiphoton Cross Sections and Its Accuracy	73
IV.	The Results of Measuring the Multiphoton Cross Sections of Direct Atom Ionization	90
V.	Analytical Expression for Estimating the Multiphoton Cross Sections of Direct Atom Ionization	101
VI.	Conclusion	107
	References	108

Collision-Induced Coherences in Optical Physics

G. S. Agarwal

I.	Introduction	114
II.	A General Framework for the Calculation of Nonlinear Optical Phenomena	116

III.	Second-Order Optical Response and Collision-Induced Coherences	119
IV.	Collision-Induced Coherences in Fluorescence and Ionization Spectroscopy	124
V.	Collision-Induced Coherences in Third-Order Nonlinear Response—Four-Wave Mixing	129
VI.	Collision-Induced Coherences in Probe Absorption in the Presence of a Pump	139
VII.	Relation between Collision-Induced Coherences in Second-Order and Third-Order Responses	145
VIII.	Collision-Induced and -Enhanced Resonances in Fifth-Order Nonlinearities	147
IX.	Effect of Cross-Relaxation on Collision-Induced Resonances	149
X.	Dipole—Dipole Interaction-Induced Resonances	152
XI.	Collision-Induced Resonances in Spontaneous Processes	155
XII.	Narrowing and Enhancement of Signals Due to Velocity-Changing Collisions	160
XIII.	Nonlinear Response, Collisions, and Dressed States	164
XIV.	Other Sources of Coherences Similar to Collision-Induced Coherences	166
XV.	Conclusion	172
	Acknowledgments	174
	References	174

Muon-Catalyzed Fusion

Johann Rafelski and Helga E. Rafelski

I.	Introduction	177
II.	Nuclear Fusion	181
III.	dt Muon Catalytic Cycle and Reaction Rates	186
IV.	Muon Sticking	199
V.	Conclusion	209
	Acknowledgments	211
	References	212

Multiple-Electron Excitation, Ionization, and Transfer in High-Velocity Atomic and Molecular Collisions

J. H. McGuire

I.	Introduction	217
II.	Theory	219
III.	Observations and Analysis	263
IV.	Conclusion	312
	Acknowledgments	313
	Appendix: Correlation	314
	References	315

Cooperative Effects in Atomic Physics*J. P. Connerade*

I.	Introduction	325
II.	Many-Body Effects and the Conservation of Angular Momentum	328
III.	Rydberg Series	330
IV.	Non-coulombic Potentials and the Periodic Table	333
V.	Giant Resonances	337
VI.	Atomic Giant Resonances in Other Environments—Controlled Collapse and Instabilities of Valence	341
VII.	Giant Resonances in Nuclei and in Atomic Clusters	344
VIII.	Are Giant Resonances in the d and f Sequences Atomic Plasmons?	348
IX.	Extending Mean Fields Beyond the Hartree-Fock Scheme	352
X.	Can One Blow Off Complete Shells by Laser Spectroscopy?	355
XI.	Interactions Between Giant Resonances and Rydberg Series— Intershell and Intersubshell Couplings	358
XII.	Conclusion	364
