PREFACE	xi

Multiphoton Ionization

<i>H. G. Muller, P. Agostini and G. Petite</i>	1
I. Introduction	1
II. Progress in Experimental Techniques	3
III. Progress in Understanding of MPI/ATI	11
IV. Selected Experimental Results	25
V. Conclusion	37
Acknowledgments	37
References	38

Photoionization with Ultra-Short Laser Pulses

<i>R. R. Freeman, P. H. Bucksbaum, W. E. Cooke, G. Gibson, T. J. McIlrath and L. D. van Woerkom</i>	43
I. Introduction	43
II. Ponderomotive Effects in High-Intensity Photoionization	44
III. Resonance Structure in Above-Threshold Ionization	52
IV. Spatial Structure in High-Intensity Photoionization Yields	54
V. High-Intensity Photoionization with No Resonance	61
VI. Conclusion	64
References	65

Rydberg Atoms in Strong Microwave Fields

<i>T. F. Gallagher</i>	67
I. Introduction	67
II. Experimental Approach	70
III. Ionization and Excitation with Linear Polarization	77
IV. Microwave Ionization with Circular Polarization	94
V. Above-Threshold Ionization	99

VI. Conclusion	105
Acknowledgments	106
References	106

Multiphoton Ionization in Large Ponderomotive Potentials

<i>P. B. Corkum, N. H. Burnett and F. Brunel</i>	109
I. Introduction	109
II. The Quasi-Static Model of MPI	111
III. Conservation Laws	116
IV. Ponderomotive Shifts	117
V. Harmonic Generation	119
VI. Relativistic Generations	127
VII. Practical Plasma Physics Implications of Multiphoton Ionization	131
VIII. Concluding Comments	135
Appendix A	135
Appendix B	136
References	137

High-Order Harmonic Generation in Rare Gases

<i>Anne L'Huillier, Louis-André Lompré, Gerard Mainfray and Claude Manus</i>	139
I. Introduction	139
II. Experimental Results	143
III. Theoretical Description	161
IV. Conclusion	199
Acknowledgment	201
References	201

Mechanisms of Short-Wavelength Generation

<i>T. S. Luk, A. McPherson, K. Boyer and C. K. Rhodes</i>	207
I. Introduction	207
II. Experimental Results	208
III. Discussion of New Possibilities	236
IV. Summary and Conclusions	241
Acknowledgments	241
References	241

Time-Dependent Studies of Multiphoton Processes*Kenneth C. Kulander, Kenneth J. Schafer and Jeffrey L. Krause* 247

I. Introduction	247
II. Method	250
III. Results	261
IV. Summary	297
References	298

Numerical Experiments in Strong and Super-Strong Fields*J. H. Eberly, R. Grobe, C. K. Law and Q. Su* 301

I. Introduction and Overview	301
II. A Model Atom for Numerical Ionization Experiments	302
III. Analysis of Numerical Experiments	307
IV. Evidence for Weak-Field, Strong-Field, and Super-Strong-Field Regimes of Ionization	317
V. Ionization Physics in the Kramers-Henneberger Frame	323
VI. Summary	331
Acknowledgments	332
References	332

Resonances in Multiphoton Ionization*P. Lambropoulos and X. Tang* 335

I. Introduction	335
II. The Density Matrix Description of Resonant Ionization	337
III. Applications of the Density Matrix Formalism	343
IV. Nonperturbative Theory	360
Acknowledgments	370
References	371

Nonperturbative Treatment of Multiphoton Ionization Within the Floquet Framework*R. M. Potvliege and Robin Shakeshaft* 373

I. Introduction	373
II. Eigenvalue Problem	380
III. Shadow States	382
IV. Resonant Ionization	385
V. Analytic Structure of $\mathcal{E}(F)$ in the Complex F -Plane	387

VI. Partial Rates and Normalization	391
VII. Two-Color Ionization	394
VIII. Multiphoton Ionization of Hydrogen	396
IX. Photoelectron Yield	405
X. The Bielefeld Experiment	407
XI. Spatial and Temporal Effects	409
XII. High-Frequency Regime	411
XIII. Low-Frequency Regime	419
Appendix: Numerical Methods	423
Acknowledgments	429
References	429

Atomic Structure and Decay in High-Frequency Fields*Mihai Gavrila*

I. Introduction	435
II. Basic Equations	440
III. Resonant States in the Oscillating Frame	446
IV. High-Frequency Floquet Theory	455
V. Structure of Hydrogen. Dichotomy and Toroidal Shaping	470
VI. Ionization of Hydrogen. Stabilization	488
VII. Connection with Other Theories	499
Acknowledgments	505
Notes	505
References	508
