

CONTENTS

Foreword	v
Symbols and Abbreviations	xI
1. INTRODUCTION	
1.1. Static mass spectrometers	1
1.2. The principle of the static mass spectrometer	3
1.3. The development of dynamic mass spectrometers	8
2. DYNAMIC MASS SPECTROMETERS	
2.1. Definition of dynamic mass spectrometers	11
2.2. Movement of ions in electric and magnetic fields	11
2.2.1. Small deflections of the charge carriers	11
2.2.1.1. Homogeneous electrostatic field	11
2.2.1.2. Homogeneous magnetostatic field	12
2.2.1.3. Radio-frequency field	12
2.2.1.4. Homogeneous radio-frequency field	13
2.2.2. Periodic movements	14
2.2.2.1. Electric fields	14
2.2.2.2. Magnetic field	15
2.2.3. Focal lengths of unipotential lenses	15
2.2.4. Equations of motion	15
2.2.5. Laws of similarity	16
2.3. Basic types of ion motion in dynamic analyser systems	17
2.3.1. Linear direct motion	17
2.3.2. Linear periodic motions	18
2.3.3. Circular periodic motions	18
2.4. Principles of dynamic mass spectrometers	20
2.4.1. Replacement of the magnetic field	20
2.4.2. Classification scheme for dynamic mass spectrometers	21
2.4.2.1. Energy balance mass spectrometers	21
2.4.2.2. Time-of-flight mass spectrometers	22
2.4.2.3. Path stability spectrometers	22
2.4.2.4. Characteristic frequency generator spectroscopes	22
2.4.3. Focussing principles	22
2.4.4. Accumulation	23
2.4.5. The first dynamic mass spectrometer	24

DYNAMIC MASS SPECTROMETRY EQUIPMENT

3. ENERGY BALANCE SPECTROMETERS

3.1. Accelerating spectrometers	25
3.1.1. Linear direct acceleration spectrometers	25
3.1.1.1. The <i>Beckman</i> spectrometer	26
3.1.1.2. The <i>Bennett</i> spectrometer	26
3.1.1.3. The <i>Boyd</i> mass spectrometer probe	37
3.1.1.4. <i>Redhead's</i> RF mass spectrometer	37
3.1.1.5. Theory and analogy	46
3.1.2. Linear periodic acceleration spectrometers	48
3.1.2.1. High-voltage generator based on the principle of the linear oscillator	48
3.1.2.2. Particle accelerator based on the <i>Palletron</i> principle (<i>E. W. Blauth, F. Melzner, E. H. Meyer</i>)	50
3.1.2.3. The linear periodic acceleration spectrometer by <i>Schissel</i> (<i>Palletron</i> spectrometer)	52
3.1.2.4. The acceleration spectrometer by <i>Bierman</i>	55
3.1.2.5. The <i>Loeb-Eiber</i> linear periodic mass filter	56
3.1.2.6. The double well spectrometer	58
3.1.3. Circular periodic acceleration spectrometer	60
3.1.3.1. The <i>omegatron</i>	61
3.2. Deceleration spectrometers	66
3.2.1. Linear direct systems	67
3.2.1.1. The RF deceleration spectrometer of <i>Hare</i> and <i>Margetts</i>	67
3.2.2. Linear periodic systems	69
3.2.3. Circular periodic systems	69
3.2.3.1. The decelerating cyclotron	69
3.2.3.2. The decelerating <i>omegatron</i>	70

4. TIME-OF-FLIGHT SPECTROMETERS

4.1. Time-of-flight spectrometers without phase relations	71
4.1.1. Linear direct time-of-flight spectrometers	71
4.1.1.1. Pulsed mass spectrometer (<i>W. E. Stephens</i>)	71
4.1.1.2. The ion <i>velocitron</i>	71
4.1.1.3. The time-of-flight spectrometer of <i>R. Keller</i>	74
4.1.1.4. The time-of-flight spectrometer of <i>Wolf</i> and <i>Stephens</i>	75
4.1.1.5. The time-of-flight spectrometer of <i>Wiley</i> and <i>McLaren</i>	75
4.1.1.6. The time-of-flight spectrometer of <i>Katzenstein</i> and <i>Friedland</i>	80
4.1.2. Linear periodic systems	81
4.1.3. Circular periodic time-of-flight spectrometers	82
4.1.3.1. <i>Goudsmit's</i> <i>Chronotron</i>	82
4.1.3.2. A circular periodic time-of-flight spectrometer without a magnetic field	85

4.1.3.3.	The trochoidal time-of-flight spectrometer of <i>Hipple and Sommer</i>	86
4.2.	Time-of-flight spectrometers with phase relations	89
4.2.1.	Linear direct systems	89
4.2.1.1.	Time-of-flight spectrometer with phase focussing (<i>Glenn</i>).	90
4.2.1.2.	<i>Le Poole's</i> mass spectrograph	93
4.2.1.3.	Phase angle time-of-flight spectrometer with frequency modulation (<i>Carre and Margoloff</i>)	95
4.2.2.	Linear periodic systems	97
4.2.2.1.	The phase angle time-of-flight spectrometer (<i>Tempitron</i>) of <i>E. W. Blauth, F. Melzner and E. H. Meyer</i>	97
4.2.2.2.	The time-of-flight spectrometer of <i>Alikhanov</i>	102
4.2.3.	Circular periodic systems	104
4.2.3.1.	The mass synchrotron of <i>L. G. Smith</i>	104
4.2.3.2.	The time-of-flight spectrometer with a variable electric field, proposed by <i>Hipple and Thomas</i>	107
5.	PATH-STABILITY SPECTROMETERS	
5.1.	Velocity-stability spectrometers	110
5.1.1.	Linear direct systems	110
5.1.1.1.	The velocity-stability spectrometer proposed by <i>Smythe and Mattauich</i>	110
5.1.1.2.	The linear direct velocity-stability spectrometer by <i>Elings</i>	113
5.1.2.	Linear periodic systems	115
5.1.2.1.	The velocity-stability spectrometer proposed by <i>Melzner (Reflektron)</i>	115
5.1.3.	Circular periodic systems	117
5.1.3.1.	The velocity-stability spectrometer by <i>Falk and Schwering</i>	117
5.2.	Phase-stability spectrometers	121
5.2.1.	Linear direct systems	121
5.2.1.1.	Phase-stability spectrometers	122
5.2.1.2.	Phase-stability spectrometer with rotating fields	123
5.2.2.	Linear periodic systems	125
5.2.2.1.	The Farvitron as a phase-stability spectrometer	125
5.2.2.2.	The slot spectrometer.	131
5.2.3.	Circular periodic phase-stability spectrometer	134
5.3.	M/e -stability spectrometers	134
5.3.1.	Linear direct systems	137
5.3.1.1.	The monopole spectrometer described by <i>U. von Zahn</i>	137
5.3.1.2.	The M/e -stability spectrometer described by <i>S. H. Bauer</i>	137
5.3.2.	Linear periodic systems	140
5.3.2.1.	The quadrupole mass filter described by <i>Paul and Steinwedel</i>	140

5.3.2.2. The monopole spectrometer as a linear (direct) M/e -stability spectrometer	147
5.3.2.3. The ion cage (linear periodic M/e -stability spectrometer)	150
5.3.3. Circular periodic systems	155
6. CHARACTERISTIC FREQUENCY GENERATOR SPECTROSCOPES	
6.1. Linear direct systems	156
6.2. Linear periodic systems	158
6.2.1. The <i>Barkhausen-Kurz</i> decelerating-field generator	158
6.2.2. The self-excited linear oscillator as a mass spectroscope (Oscillotron).	160
6.3. Circular periodic systems	165
6.3.1. The magnetron spectroscope	165
7. ELECTRONIC IMPROVEMENT OF THE RESOLVING POWER	166
8. SYSTEMATIC ANALYSIS OF DYNAMIC MASS SPECTROMETERS.	168
