## 1 Theory of Transport and Relaxation Processes in Polyatomic Fluids

1.1	Non-equilibrium statistical mechanics of polyatomic fluids . . . . .	2
1.1.1	The classical ensemble . . . . .	2
1.1.2	Local variables . . . . .	8
1.1.3	Single-particle fields . . . . .	10
1.1.4	Two-particle fields . . . . .	11
1.1.5	Transport-relaxation equations . . . . .	12
1.1.6	Linear phenomenology . . . . .	18
1.1.7	Formal solution of Liouville equation . . . . .	21
1.1.8	Correlation integrals and linear phenomenological coefficients . . . . .	29
1.1.9	The quantum ensemble . . . . .	35
1.2	Kinetic theory of polyatomic gases . . . . .	39
1.2.1	The Boltzmann equation . . . . .	39
1.2.2	Equations of change . . . . .	50
1.2.3	Linearization of the Boltzmann equation . . . . .	52
1.2.4	The Waldmann-Snider equation . . . . .	57
1.2.5	Intermolecular forces and quantum-mechanical collision cross-sections . . . . .	65
1.2.6	The theory of Mason and Monchick . . . . .	68
1.2.7	Classical scattering cross-sections . . . . .	73
1.2.8	The rough sphere, loaded sphere and spherocylinder models . . . . .	76
1.2.9	Rough spheres . . . . .	78
1.2.10	Loaded spheres . . . . .	80
1.2.11	Loaded spherocylinders . . . . .	83
1.2.12	Electric and magnetic dipole moments . . . . .	84
1.3	Applications of the theory . . . . .	91
1.3.1	Chapman-Enskog method and transport coefficients . . . . .	92

1.3.2	Second-order Chapman-Enskog theory . . . . .	108
1.3.3	Non-resonant absorption and dielectric relaxation . . . . .	112
1.3.4	The method of moments . . . . .	117
1.3.5	Spin diffusion and relaxation . . . . .	123
1.3.6	Electric polarization . . . . .	127
1.3.7	Electric permeability . . . . .	129
