Foreword by Ugo Fano	xiii
Preface	xv
1 Pre-quantum mechanical developments	1
1 ¹ . Atomic physics before the twentieth century	1
2 ¹ . The nuclear atom model	4
3 ¹ . Spectroscopy before the twentieth century	10
4 ¹ . Introduction of Planck's constant	14
5 ¹ . Einstein's paper on light quanta	21
6 ¹ . Heat capacity of solids and gases	25
7 ¹ . The Bohr model for hydrogen	28
8 ¹ . Excitation of spectra	35
9 ¹ . Alkali spectra	39
10 ¹ . X-ray spectra	45
11 ¹ . The periodic system; Pauli exclusion principle	49
12 ¹ . Bohr's correspondence principle	51
13 ¹ . Waves and photons	60
14 ¹ . The discovery of quantum mechanics	64
2 Principles of quantum mechanics	72
1 ² . Mathematical formalism	73
2 ² . Physical postulates	86
3 ² . The uncertainty principle	95
4 ² . The statistical operator (density matrix)	97
5 ² . The momentum representation	99
6 ² . Symmetry group of the Hamiltonian	101
7 ² . Indistinguishable particles	105
8 ² . Perturbation theory: variation method	114
9 ² . Perturbation theory: discrete energy levels	116
10 ² . Perturbation theory: change of coupling	121
11 ² . Perturbation theory: time-dependent	123
12 ² . Wentzel-Brillouin-Kramers-Jeffreys approximation	130

3	Angular momentum	136
1 ³ .	Commutation rules and allowed values	136
2 ³ .	Matrices for angular momentum	141
3 ³ .	Addition of two angular momenta	144
4 ³ .	Orbital angular momentum	153
5 ³ .	Spin-angular momentum	160
6 ³ .	Transformation of the $ \alpha, j, m\rangle$ under rotations	165
7 ³ .	Irreducible tensors	169
8 ³ .	Tensor products of irreducible tensors	175
9 ³ .	Coupling of more than two angular momenta	177
4	Central-field approximation	184
1 ⁴ .	Hydrogenic atoms; discrete energy levels	186
2 ⁴ .	Radial functions for hydrogenic atoms	189
3 ⁴ .	General trends of $W_0(n, l)$ and $P(n, l; r)$	196
4 ⁴ .	Term structure of configurations	199
5 ⁴ .	Parentage of terms	202
6 ⁴ .	Term energies by the diagonal sum rule	205
7 ⁴ .	Evaluation of N -electron matrix elements	209
8 ⁴ .	One-electron central-field integrals	213
9 ⁴ .	Coulomb interaction matrix elements	213
10 ⁴ .	Russell-Saunders term energies	227
11 ⁴ .	Russell-Saunders wave functions	229
5	Racah methods	235
1 ⁵ .	Tensor operators and their matrix elements	236
2 ⁵ .	Russell-Saunders term energies for two-electron systems	240
3 ⁵ .	Projection operators, wave functions for two-electron systems	245
4 ⁵ .	Three-electron systems	247
5 ⁵ .	Energy matrices for the $(sp)p'$, $s(pp')$, and d^2p configurations	251
6 ⁵ .	Equivalent-electron orbitals; coefficients of fractional parentage	254
7 ⁵ .	Coefficients of fractional parentage for the p^3 and d^3 configurations	257
8 ⁵ .	Seniority scheme	265
9 ⁵ .	Energy matrices for the a^n configurations	267
10 ⁵ .	Alternative method for the a^n configurations	271
11 ⁵ .	Energy matrices for the $a^n b$ configurations	276
12 ⁵ .	Van Vleck's theorem	280

13 ⁵ . Alternative method for the a^nb configurations	282
14 ⁵ . Configurations containing almost-closed shells	291
6 Group-theoretical methods	307
1 ⁶ . Abstract group theory	308
2 ⁶ . Group representations	313
3 ⁶ . Group characters	320
4 ⁶ . Group algebra	323
5 ⁶ . Symmetric (permutation) groups S_n	325
6 ⁶ . Clebsch-Gordan coefficients; simply reducible groups	337
7 ⁶ . Young operators	340
8 ⁶ . The Lie algebras of simple and semisimple Lie groups	344
9 ⁶ . The classification of simple Lie algebras; root figures and Dynkin diagrams, and the generators of the classical Lie groups	349
10 ⁶ . Classification of the irreducible representations of the simple and semisimple Lie groups	356
11 ⁶ . Homomorphism and isomorphism of Lie algebras and Lie groups; Casimir operators; invariant integration; infinitesimal matrices	359
12 ⁶ . Two- and three-dimensional rotation groups and their representations	363
13 ⁶ . Spinor representations and the unimodular unitary group $SU(2)$	370
7 Applications of group theory	376
1 ⁷ . The generators constructed from creation and destruction operators	377
2 ⁷ . Seniority scheme; quasi-spin; classification of the terms for the $(n_d J_a)^q$ configurations	389
3 ⁷ . Wigner-Eckart theorem; classification of the operators; Coulomb interaction	399
4 ⁷ . Coefficients of fractional parentage for f^q configurations	417
5 ⁷ . Quasi-particle scheme	420
6 ⁷ . The four-dimensional orthogonal group and the hydrogen atom	431
7 ⁷ . Dynamical groups	437
8 Self-consistent fields: Hartree-Fock theory; Thomas-Fermi model	449
1 ⁸ . The Thomas-Fermi field	451
2 ⁸ . Hartree and Hartree-Fock fields	462

3 ⁸ . Hartree-Fock equations for open-shell configurations	467
4 ⁸ . Analytic and numerical solutions of the Hartree-Fock equations	473
5 ⁸ . Approximations to the Hartree-Fock method	484
9 Configuration structure	491
1 ⁹ . Observed regularities	491
2 ⁹ . The order of electron shells for atoms and ions	514
3 ⁹ . Observed and HF ionization potentials	525
4 ⁹ . Observed and HF term energies for the normal configuration of atoms	534
5 ⁹ . Isoelectronic sequences; observed and calculated term energies	537
6 ⁹ . Parental mixing	544
Appendixes	
1. Atomic magnitudes	553
2. The nj symbols	567
3. Russell-Saunders term energies	575
