Contents

Preface xiii

Contributors xv

1
APPLICATIONS OF GROUP THEORY TO PROBLEMS OF ATOMIC PHYSICS 1
by Marcos Moshinsky
Group Theory and Harmonic Oscillator States 2
Application of Harmonic Oscillator States to Atomic and Molecular Problems 22
Group Theory and States in the Second Quantization Scheme 38
Applications to Atoms in the $2s$–$2p$ Shells 48
Conclusion 61
References 61

2
COMPACT GROUPS IN ATOMIC PHYSICS 63
by B. G. Wybourne
S-Functions 65
The Unitary Group and Its Subgroups 73
Plethysm of S-Functions 79
Classification of the L-S Terms of Atomic Configurations 86
Quasi-Particle Formalism in Atomic Shell Theory 90
Approximate Symmetries in Atoms 95
Conclusion 117
References 119

3
SECOND QUANTIZATION AND RELATIVISTIC EFFECTS IN ATOMIC PHYSICS 123
by Eugen Merzbacher
References 137

4
RELATIVISTIC SELF-CONSISTENT FIELDS 139
by D. F. Mayers
The Coulomb Field 139
Nonrelativistic Limit 141
Relativistic Hartree–Fock Equations 142
Nonrelativistic Radial Integrals 144
The Relativistic Form 147
The Breit Interaction 149
The Nucleus 150
Analytic Wavefunctions 151
Excited States 152
Numerical Results 153
References 154

5
ELECTRON CORRELATION IN *N*-ELECTRON ATOMS—A NEW ATOMIC STRUCTURE THEORY
by Oktay Sinanoğlu
Modern Atomic Structure Theory 155
Ground States 157
Excited States 159
References 173

6
COMBINED CONFIGURATION AND MAGNETIC INTERACTION FOR BOUND LEVELS OF FREE ATOMS
by Halis Odabaşı
Electrostatic Interaction, Parental and Configuration Mixing 175
Relativistic Effects, Breit Equation and Low-*Z* Pauli Approximation 178
Single-Configuration Approach, Magnetic Mixing and Intermediate Coupling 182
The Combination of Configuration and Magnetic Mixing 183
Application, Results, and Discussion 185
References 189

7
ELECTRON-ATOM SCATTERING AND RESONANCES 191
by P. G. Burke
Basic Scattering Theory 191
The Close-Coupling Approximation and a Minimum Principle 194
Correlation and Polarization Effects 198
Other Methods for Calculating Phase Shifts 205
Atomic Resonance Theory 210
References 215

8
COMPUTERS AND COMPUTATIONAL TECHNIQUES IN ATOMIC PHYSICS 217
by Charlotte Froese-Fischer
Typewriter Terminals 218
Configuration Interaction Calculation 220
The Multiconfiguration Hartree–Fock Method 228
References 231

9
COMPUTATIONAL METHODS IN THE DIFFERENTIAL EQUATIONS OF ATOMIC PHYSICS 233
by D. F. Mayers
Finite Differences 234
Second-Order Equations 236
The Eigenvalue Problem 238
First-Order Equations 241
Conclusion 243
References 244

Index 245
