<i>Preface</i>	xiii

CHAPTER I

INTRODUCTION	1
-------------------------------	---

CHAPTER II

SECTION	THE QUANTUM MECHANICAL METHOD	12
1 ² Symbolic algebra of states and observables	12	
2 ² Representations of states and observables	15	
3 ² Continuous eigenvalues and the Schrödinger representation	20	
4 ² The statistical interpretation	24	
5 ² The laws of quantum mechanics	25	
6 ² Schrödinger's equation	26	
7 ² Matrix mechanics	27	
8 ² Perturbation theory	30	
9 ² Résumé of the perturbation theory	34	
10 ² Remarks on the perturbation theory	35	
11 ² Perturbation caused by a single state	37	
12 ² The analysis of non-commuting vectors	43	

CHAPTER III

ANGULAR MOMENTUM	45
1 ³ Definition of angular momentum	45
2 ³ Allowed values of angular momentum	46
3 ³ The matrices of angular momentum	48
4 ³ Orbital angular momentum	50
5 ³ Spin angular momentum	54
6 ³ Vector addition of angular momenta	56
7 ³ The matrix of $(J_1 + J_2)^2$	58
8 ³ Matrix of \mathbf{T} in the $j m$ scheme. Selection rule on j	59
9 ³ Dependence of the matrix of \mathbf{T} on m	61
10 ³ The matrices of J_1 and J_2 , where $J_1 + J_2 = \mathbf{J}$	64

CHAPTER III (<i>continued</i>)			
SECTION			PAGE
11 ³	Matrix of a vector \mathbf{P} which commutes with \mathbf{J}_1	.	67
12 ³	Matrix of $\mathbf{P} \cdot \mathbf{Q}$.	70
13 ³	Sum rules	.	71
14 ³	Transformation amplitudes for vector addition	.	73
CHAPTER IV			
THE THEORY OF RADIATION			79
1 ⁴	Transition probabilities	.	79
2 ⁴	Classical electromagnetic theory	.	83
3 ⁴	Expansion of the retarded potential	.	84
4 ⁴	The correspondence principle for emission	.	87
5 ⁴	The dipole-radiation field	.	90
6 ⁴	The quadrupole-radiation field	.	93
7 ⁴	Spectral lines in natural excitation	.	97
8 ⁴	Induced emission and absorption	.	100
9 ⁴	Dispersion theory. Scattering. Raman effect	.	103
10 ⁴	Natural shape of absorption lines	.	109
CHAPTER V			
ONE-ELECTRON SPECTRA			112
1 ⁵	Central-force problem	.	112
2 ⁵	Radial functions for hydrogen	.	114
3 ⁵	The relativity correction	.	118
4 ⁵	Spin-orbit interaction	.	120
5 ⁵	Sketch of the relativistic theory	.	125
6 ⁵	Intensities in hydrogen	.	131
7 ⁵	Experimental results for hydrogenic spectra	.	137
8 ⁵	General structure of the alkali spectra	.	141
9 ⁵	Intensities in alkali spectra	.	147
10 ⁵	Zeeman effect	.	149

CHAPTER VI

SECTION	THE CENTRAL-FIELD APPROXIMATION	PAGE
1 ⁶	The Hamiltonian for many-electron atoms	158
2 ⁶	Equivalence degeneracy	158
3 ⁶	The dynamical equivalence of the electrons	160
4 ⁶	The Pauli exclusion principle	162
5 ⁶	Conventions concerning quantum numbers. Closed shells	166
6 ⁶	Matrix components for $\Sigma_i f(i)$	168
7 ⁶	Matrix components for $\Sigma_{i,j} g(i, j)$	169
8 ⁶	Matrix components of electrostatic interaction	171
9 ⁶	Specialization for closed shells	174
10 ⁶	One electron outside closed shells	177
11 ⁶	Odd and even states	183
		185

CHAPTER VII

THE RUSSELL-SAUNDERS CASE: ENERGY LEVELS		187
1 ⁷	The <i>LS</i> -coupling scheme	188
2 ⁷	Term energies	191
3 ⁷	The Landé interval rule	193
4 ⁷	Absolute term intervals	195
5 ⁷	Formulas and experimental comparison	197
6 ⁷	Terms in the nl^x configurations	207
7 ⁷	The triplet terms of helium	210

CHAPTER VIII

THE RUSSELL-SAUNDERS CASE: EIGENFUNCTIONS		213
1 ⁸	Vector coupling in antisymmetric states	213
2 ⁸	Genealogical characterization of <i>LS</i> -coupling terms	216
3 ⁸	Landé intervals for terms of coupled groups	219
4 ⁸	Calculation of eigenfunctions by direct diagonalization	220
5 ⁸	Calculation of eigenfunctions using angular-momentum operators	226
6 ⁸	Calculation of eigenfunctions from vector-coupling formulas	228
7 ⁸	Separation of the 2D 's of d^3	233

CHAPTER IX

SECTION		PAGE
THE RUSSELL-SAUNDERS CASE: LINE STRENGTHS		236
1⁹	Configuration selection rules	236
2⁹	Line strengths in Russell-Saunders multiplets	237
3⁹	Multiplet strengths in a transition array	244
4⁹	Multiplet strengths obtained from spectroscopic stability . .	249
5⁹	Quadrupole multiplets	252

CHAPTER X

<i>jj</i> COUPLING		257
1¹⁰	The <i>jj</i> -coupling scheme and the spin-orbit interaction	257
2¹⁰	The addition of a weak electrostatic interaction	259
3¹⁰	Eigenfunctions	262
4¹⁰	Line strengths	264

CHAPTER XI

INTERMEDIATE COUPLING		266
1¹¹	Matrix of spin-orbit interaction for configurations consisting of coupled groups	266
2¹¹	Matrix of spin-orbit interaction obtained from the eigenfunctions	270
3¹¹	Illustrations of the transition from <i>LS</i> to <i>jj</i> coupling	271
4¹¹	Line strengths in intermediate coupling	277
5¹¹	The forbidden lines of astrophysical interest	282

CHAPTER XII

TRANSFORMATIONS IN THE THEORY OF COMPLEX SPECTRA		284
1¹²	Configurations containing almost closed shells	284
2¹²	The transformation to <i>LS</i> coupling	285
3¹²	The transformation to <i>jj</i> coupling	287
4¹²	The transformation between zero-order states	287
5¹²	The transformation $nlm_s m_l \rightleftharpoons nljm$	290
6¹²	The transformation $jjJM \rightleftharpoons SLJM$	291

CHAPTER XIII

CONFIGURATIONS CONTAINING ALMOST CLOSED SHELLS. X-RAYS		PAGE
SECTION		PAGE
1 ¹³	The electrostatic energy in <i>LS</i> coupling	295
2 ¹³	The spin-orbit interaction	299
3 ¹³	Pure almost-closed-shell configurations	300
4 ¹³	The rare-gas spectra	301
5 ¹³	The configurations $p^5 s$ and $d^9 s$	304
6 ¹³	The configuration $p^5 p$ in the rare gases	306
7 ¹³	The configuration $p^5 d$ in the rare gases	312
8 ¹³	Line strengths	316
9 ¹³	X-ray spectra	316
10 ¹³	Line strengths in X-ray spectra	322
11 ¹³	X-ray satellites	323

CHAPTER XIV

CENTRAL FIELDS		PAGE
		PAGE
1 ¹⁴	The periodic system	327
2 ¹⁴	The statistical method of Fermi-Thomas	335
3 ¹⁴	The Wentzel-Brillouin-Kramers approximation	339
4 ¹⁴	Numerical integration of the radial equation	344
5 ¹⁴	Normal state of helium	345
6 ¹⁴	Excited levels in helium	348
7 ¹⁴	Normal states of first-row atoms	351
8 ¹⁴	Hartree's self-consistent fields	354
9 ¹⁴	Survey of consistent-field results	358
10 ¹⁴	Self-consistent fields for oxygen	362

CHAPTER XV

CONFIGURATION INTERACTION

1 ¹⁵	Interaction of sd and p^2 in magnesium	366
2 ¹⁵	Perturbed series	367
3 ¹⁵	Auto-ionization	369
4 ¹⁵	Many-electron jumps	375
5 ¹⁵	Spin-orbit perturbation of doublet intensities	376

CHAPTER XVI

SECTION		PAGE
	THE ZEEMAN EFFECT	378
1 ¹⁶	The 'normal' Zeeman effect	378
2 ¹⁶	The weak-field case: Russell-Saunders terms	380
3 ¹⁶	Weak fields: general case	384
4 ¹⁶	Intensities in the Zeeman pattern: weak fields	386
5 ¹⁶	The Paschen-Back effect	388
6 ¹⁶	The Paschen-Back effect: illustrative examples	390
7 ¹⁶	Quadrupole lines	395

CHAPTER XVII

	THE STARK EFFECT	PAGE
1 ¹⁷	Hydrogen	398
2 ¹⁷	Stark effect at the series limit	404
3 ¹⁷	General theory for non-hydrogenic atoms	409
4 ¹⁷	Helium	413
5 ¹⁷	Alkali metals	415

CHAPTER XVIII

	THE NUCLEUS IN ATOMIC SPECTRA	PAGE
1 ¹⁸	Effect of finite mass	418
2 ¹⁸	Local nuclear fields	420
3 ¹⁸	Nuclear spin in one-electron spectra	421
4 ¹⁸	The hyperfine structure of two-electron spectra	424
5 ¹⁸	Zeeman effect of hyperfine structure	426

APPENDIX

UNIVERSAL CONSTANTS AND NATURAL
ATOMIC UNITS

428

<i>List of Principal Tables</i>	434
<i>Index of Subjects</i>	435
<i>Index of Names</i>	439
