

# Contents

Preface	v
<b>1. Symmetry and Invariance—Some Preliminary Notions</b>	<b>1</b>
1. Introduction	1
2. The group concept	2
3. Lie groups and Lie algebras	3
4. Symmetry and invariance	7
5. The direct product group	9
<b>2. Theory of the Auger Process</b>	<b>13</b>
1. Introduction	13
2. Mechanism of the Auger process. Real and virtual photons	14
3. The Møller formula	20
4. Generalized derivation of the Møller formula	22
5. Some related concepts and processes	27
<b>3. The Coulomb Field and Coulomb Wave Functions</b>	<b>30</b>
1. Introduction	30
2. Symmetry properties of the Coulomb field	32
3. The non-relativistic spin- $\frac{1}{2}$ (NRS) particle in a Coulomb field	36
4. Some Coulomb field calculations of Auger transitions	39
5. Screening parameters	56
6. The hydrogenic atom—some dividends	58
<b>4. Symmetry-breaking and the Classification of States</b>	<b>64</b>
1. Introduction	64
2. The <i>LS</i> coupling scheme (Russell–Saunders coupling)	68

3. The <i>jj</i> coupling scheme	72
4. The intermediate coupling scheme	76
5. Configuration interaction	79
6. The mixed coupling scheme	87
<b>5. Some Central-field Calculations</b>	<b>91</b>
1. Introduction	91
2. Wigner algebra and selection rules	92
3. Auger transition probabilities in <i>jj</i> coupling	93
4. Transition rates with <i>LS</i> coupling	104
5. Transition probabilities with intermediate coupling	109
6. Electron energies of the <i>K</i> -Auger spectrum	119
<b>6. The Many-Electron Atom</b>	<b>126</b>
1. Introduction	126
2. Symmetries of the many-electron system	128
3. Techniques for the many-electron system	130
4. Nonrelativistic self-consistent-field calculations—Theory and Experiment	138
5. The Relativistic Hartree-Fock method	142
6. The Thomas-Fermi-Dirac method	148
7. Relativistic approaches to the many-electron atom—Theory and Experiment	151
<b>7. Some Recent Advances in Auger Theory</b>	<b>158</b>
1. Satellite spectra	158
2. Auger transitions in partially filled shells	163
3. Effects of electron correlation	171
<b>8. Auger Electron Spectroscopy and its Application to Surface Science</b>	<b>180</b>
1. Introduction	180
2. Auger electron energies—general features	188
3. Auger electron spectroscopy as a surface technique—historical background	193

## CONTENTS

xi

4. The secondary electron spectrum	195
5. Auger electron spectra of atoms in solids	199
6. Experimental technique	218
7. Surface chemical analysis with AES	238
References	251
Index	259
