

CONTENTS

Preface	v
1 AN INTRODUCTION TO DIFFRACTION PHENOMENA	1
Preamble--Double Slit Experiment--Theory of Interference Phenomena--Scattering of Beams of Charged Particles	
2 INTRODUCTION TO THE THEORY OF MOLECULAR SCATTERING	15
3 ATOMIC ELASTIC SCATTERING	26
Schrodinger Equation--Incident Beam-- Scattered Beam--Scattering Amplitudes-- Born Approximation	
4 INELASTIC SCATTERING	53
5 SCATTERING BY RIGID MOLECULES	66
6 SCATTERING BY A VIBRATING MOLECULE	107
Introduction--Anharmonicity--Mean Amplitudes of Vibration for Diatomic Molecules--Mean Amplitudes of Vibration for Polyatomic Molecules--Internal Rotation--The Shrinkage Effect--Correlation with Spectroscopic Data	

7	THE EXPERIMENT	110
	Beam Generation--High Voltage Production-- Biassing--Electron Optics--Beam Alignment-- Gas Sample Scattering Chamber--Vacuum System--Detection--Sector--Preliminary Pro- cedures--Sample Purity--Temperature-- Calibration--Data Collection--Photographic Development--Densitometry	
8	DATA REDUCTION	139
	Density to Intensity Conversion--Further Corrections--Background Insertion	
9	RADIAL DISTRIBUTION FUNCTION	150
	Radial Distribution Curve Calculation-- Radial Distribution Curve Analysis-- Correlation Methods	
10	MOLECULAR SCATTERING CURVE ANALYSES	167
	The Method of Univariant Adjustments	
	Subject Index	179
