CONTENTS

Chapter 1
BASIC PRINCIPLES OF
THE ZERO-RANGE POTENTIAL METHOD

1.1 Introduction. 1
1.2 Formulation of the Method 4
1.3 The One-Center Problem and Its Simple Applications. . . . 8
1.4 Separable Potentials and Scattering of Slow Electrons by Atoms 14

Chapter 2
TRAJECTORIES OF THE POLES OF THE S-MATRIX
AND RESONANCE SCATTERING

2.1 Preliminary Remarks 23
2.2 Trajectories of the Zeros of the Jost Function for $\ell = 0$. 25
2.3 The S-Matrix in a Two-Pole Approximation. 33
2.4 The Case of $\ell \neq 0$ and Perturbation Theory for a Bound State Close to the Continuum 35
2.5 Trajectories of the Poles of the S-Matrix in the Case of ZRP and Separable Potentials. 39

Chapter 3
ZERO-RANGE POTENTIALS FOR MOLECULAR
SYSTEMS. BOUND STATES

3.1 Many-Center Problems without External Fields. 43
3.2 Potential Curves for a Two-Center System and Some Applications 47

3.3 Analytic Properties of the Potential Curves and Trajectories of the Poles of the S-Matrix. 50
3.4 Perturbation Theory in the Presence of an External Electric Field. 58
3.5 Perturbation Theory in the Presence of an External Magnetic Field 62
3.6 Solution of the Schrödinger Equation with the Help of ZRPs. 68

Chapter 4
SCATTERING BY A SYSTEM OF ZERO-RANGE POTENTIALS AND THE PARTIAL WAVE METHOD FOR A NONSPHERICAL SCATTERER

4.1 The Partial Wave Method 77
4.2 Behavior of the Phases at Low Energy. 81
4.3 The Variational Principle 85
4.4 Scattering by a System of ZRPs. 89
4.5 ZRPs in the Theory of Multiple Scattering 93

Chapter 5
ZERO-RANGE POTENTIALS IN MULTI-CHANNEL PROBLEMS

5.1 Zero-Range Potentials for a Many-Component Wavefunction 97
5.2 Singlet-Triplet Splitting and Cross Sections for Elastic and Inelastic Scattering 105
5.3 Energy Terms of the e + H_2 System and Trajectories of the Poles of the S-Matrix for a Two-Channel Problem. 113
5.4 Electron Scattering by Molecules in the Separable Potential Approximation. 120

Chapter 6
MOTION OF A PARTICLE IN A PERIODIC FIELD OF ZERO-RANGE POTENTIALS

6.1 One-Dimensional Lattice in a Three-Dimensional Space. Bound States 127
6.2 Electron Scattering by Long Linear Molecules. 132
6.3 Two-Dimensional Lattice in Three-Dimensional Space. . . 138
6.4 Three-Dimensional Lattice and the Method of Ewald 141

Chapter 7
WEAKLY BOUND SYSTEMS IN ELECTRIC AND MAGNETIC FIELDS

7.1 Weakly Bound Systems in a Homogeneous Electric Field. 153

7.2 Weakly Bound Systems in a Homogeneous Magnetic Field. 162
7.3 Weakly Bound Systems in Crossed Electric and Magnetic Fields. 171
7.4 A Combination of ZRPs and a Coulomb Field 174

Chapter 8
ELECTRON DETACHMENT IN SLOW COLLISIONS BETWEEN A NEGATIVE ION AND AN ATOM

8.1 ZRPs in Time-Dependent Quantum Mechanical Problems. . . 181
8.2 Linear Approximation in Detachment Theory 186
8.3 Account of the Finite Size of the Colliding System. . . 197
8.4 Production of Negative Ions in Three-Body Collisions 205

Chapter 9
TIME-DEPENDENT QUANTUM MECHANICAL PROBLEMS SOLVABLE BY CONTOUR INTEGRATION

9.1 General Time-Dependent Problems Solvable by Contour Integration. 209
9.2 Adiabatic Approximation and Trajectories of the Poles of the S-Matrix. 220
9.3 Ionization in Slow Atomic Collisions. 224

Chapter 10
NONLINEAR APPROXIMATIONS IN THE THEORY OF ELECTRON DETACHMENT

10.1 Nonlinear Problems Solvable by Contour Integration. Sudden Approximation 235
10.2 Quadratic Approximation in the Theory of Electron Detachment 239
10.3 Quadratic Approximation (General Case) 249

Chapter 11
TIME-INDEPENDENT QUANTUM MECHANICAL PROBLEMS

11.1 Account of the Quantal Motion of the Nuclei in Detachment Theory. 257
11.2 Time-Independent Quantum Mechanical Problems Solvable by Contour Integration. 269
