

## TABLE OF CONTENTS

<u>Chapter One. Introduction.....</u>	1
Atomic units.....	2
Bohr atoms.....	4
Traces and phase-space integrals.....	10
Bohr atoms with shielding.....	11
The effective potential.....	13
Size of atoms.....	21
Problems.....	24
<u>Chapter Two. Thomas-Fermi Model.....</u>	27
General formalism.....	27
The TF model.....	33
Neutral TF atoms.....	37
Maximum property of the TF potential functional.....	39
An electrostatic analogy.....	41
TF density functional.....	43
Minimum property of the TF density functional.....	45
Upper bounds on $B$ .....	46
Lower bounds on $B$ .....	50
Binding energy of neutral TF atoms.....	54
TF function $F(x)$ .....	56
Scaling properties of the TF model.....	66
Highly ionized TF atoms.....	73
Weakly ionized TF atoms.....	80
Arbitrarily ionized TF atoms.....	96
Validity of the TF model.....	99
Density and potential functionals.....	104
Relation between the TF approximation and Hartree's method....	119
Problems.....	124
<u>Chapter Three. Strongly Bound Electrons.....</u>	130
Qualitative argument.....	130
First quantitative derivation of Scott's correction.....	131
Scott's original argument.....	138
TFS energy functional.....	139
TFS density.....	146

Consistency.....	148
Scaling properties of the TFS model.....	155
Second quantitative derivation of Scott's correction.....	158
Some implications concerning energy.....	162
Electron density at the site of the nucleus.....	164
Numerical procedure.....	168
Numerical results for neutral mercury.....	170
Problems.....	173
 <u>Chapter Four. Quantum Corrections and Exchange.....</u> 175	
Qualitative arguments.....	176
Quantum corrections I (time transformation function).....	177
Quantum corrections II (leading energy correction).....	190
The von Weizsäcker term.....	194
Quantum corrections III (energy).....	196
Airy averages.....	199
Validity of the TF approximation.....	207
Quantum corrected $E_1(V+\zeta)$ .....	210
Quantum corrected density.....	213
Exchange I (general).....	221
Self energy.....	225
Exchange II (leading correction).....	225
History.....	230
Energy corrections for ions.....	232
Ionization energies.....	236
Minimal binding energies (chemical potentials).....	239
Shielding of the nuclear magnetic moment.....	241
Simplified new differential equation (ES model).....	244
An application of the ES model. Diamagnetic susceptibilities..	255
Improved (?) ES model. Electric polarizabilities.....	260
Exchange III. (Exchange potential).....	275
New differential equation.....	278
Small distances.....	282
Large distances.....	283
Numerical results.....	286
Problems.....	293
 <u>Chapter Five. Shell Structure.....</u> 295	
Experimental evidence.....	297
Qualitative arguments.....	299
Bohr atoms.....	300

TF quantization.....	305
Fourier formulation.....	312
Isolating the TF contribution.....	314
Lines of degeneracy.....	315
Classical orbits.....	320
Degeneracy in the TF potential.....	323
TF degeneracy and the systematics of the Periodic Table.....	327
General features of $N_{qu}$ .....	329
General features of $E_{qu}$ .....	333
Linear degeneracy. Scott correction.....	335
Perturbative approach to $E_{osc}$ .....	336
$\ell$ -quantized TF model.....	338
$j \neq 0$ terms. Leading energy oscillation.....	342
Fresnel integrals.....	347
$\lambda$ oscillations.....	351
$v$ oscillations.....	358
Semiclassical prediction for $E_{osc}$ .....	360
Other manifestations of shell structure.....	363
Problems.....	367
<u>Chapter Six. Miscellanea</u> .....	370
Relativistic corrections.....	370
Kohn-Sham equation.....	377
Wigner's phase-space functions.....	379
Problems.....	381
<u>Footnotes</u> .....	383
Chapter One.....	383
Chapter Two.....	384
Chapter Three.....	387
Chapter Four.....	389
Chapter Five.....	394
Chapter Six.....	395
<u>Index</u> .....	397
Names.....	397
Subjects.....	398
