<i>Preface</i>	ix
<i>Acknowledgments</i>	xiii
<i>Nomenclature</i>	xv

Chapter 1 Introduction

1.1 Some Remarks on the Development of Experiment and Theory	1
1.2 Models of Surfaces and Real Surfaces	9
1.3 Final Introductory Remarks	13
References	15

Chapter 2 Elementary Kinetic Theory of Gases at Interfaces

2.1 Equilibrium Properties	19
2.2 Nonequilibrium Properties	25
References	31

Chapter 3 Interaction Potentials and Interaction Regimes

3.1 Introduction	33
3.2 The Fundamental $v(r)$ Curve	33
3.3 Long-Range Attractive and Short-Range Repulsive Interactions	34
3.4 Simple Empirical Interatomic Potential Functions	35
3.5 Gas-Surface Interaction Potentials	38
3.6 General Considerations of Scattering Processes	44
References	48

Chapter 4 Simplified Lattice Models of the Dynamics of Solid Surface Atoms: Classical-Mechanical Treatment of Gas-Surface Scattering

4.1	General Considerations	50
4.2	Major Simplifications in Lattice Models	51
4.3	The n -Dimensional Semi-Infinite Lattice	52
4.4	Surface Atom Response Functions in Semi-Infinite Lattices	56
4.5	Lattice Atom Response Functions	59
4.6	Classical Thermal Motion of the Lattice Model	61
4.7	General Classical Lattice Theory of Gas-Surface Scattering	63
4.8	Some General Remarks on the Classical Treatment	66
4.9	Inadequacy of the One-Dimensional Lattice Model in Gas-Surface Scattering Theory	68
4.10	Characteristic Vibration Temperature of a Model of a Solid	71
	References	72

Chapter 5 Molecular Beams

5.1	Introduction	73
5.2	Effusive Source Beams	74
5.3	Nozzle Source Beams	78
5.4	Measurements of Beam Properties	82
5.5	Current Laboratory Practices in Generating Molecular Beams for Surface Scattering Experiments	98
	References	99

Chapter 6 Inelastic Scattering: Thermal Regime

6.1	Introduction	103
6.2	The Scattering Patterns	105
6.3	The Cubes Models: The Flat-Surface Assumption	108
6.4	Some Additional Experimental Results	117
	References	125

Chapter 7 Inelastic Scattering: Structure Regime

7.1	Introduction	127
7.2	Transition from Thermal to Structure Scattering	128
7.3	Structure Scattering	133
	References	142

Chapter 8 Quantum Theory of Gas-Surface Scattering

8.1	General Considerations	143
8.2	Some Remarks on Notation	145
8.3	The T -Matrix Formalism	146

8.4	Polyatomic Gas Molecules	154
8.5	Approximations	155
8.6	Diffraction of Gas Atoms by a Stationary Solid	156
8.7	Possibility of Comparing Diffraction Theory with Experiment	166
8.8	One-Phonon Inelastic Scattering of Gas Atoms	166
8.9	One-Phonon Scattering by a Flat Surface, Ignoring Bound-State Effects: Derivation of the Differential Scattered Intensity Used in the Calculations	174
8.10	General Conservation Laws for Atom-Surface Scattering	175
8.11	Debye-Waller Attenuation of Diffracted Intensities	177
8.12	Interaction Potential Models and Matrix Elements for Diffraction and One-Phonon Calculations, Ignoring Bound States	178
	References	180

Chapter 9 Quantum Mechanical Scattering Phenomena

9.1	General Considerations	181
9.2	Elastic (Specular) and Inelastic Scattering by Metal Surfaces	188
9.3	Atomic and Molecular Diffraction	199
9.4	Comparison of Diffraction Theory with Experiments	212
9.5	Quantum Mechanical Rainbow Scattering	221
9.6	Rotational-State Transitions Accompanying Diffraction of Diatomic Gases by Alkali Halide Surfaces	225
9.7	Diffraction by Metal Surfaces	226
9.8	Inelastic Scattering in Diffractive Systems	229
9.9	Bound-State Resonances	232
9.10	Scattering of Molecular Beams by Surfaces Covered by Adsorbates	244
	References	252

Chapter 10 The Energy Accommodation Coefficient

10.1	Introduction	255
10.2	Experimental Methods	257
10.3	Experimental Procedure	266
10.4	Experimental Results	268
10.5	Classical Theory of the EAC	282
10.6	Limits of Structure Scattering and Thermal Scattering: Applications of the Hard-Spheres and Soft-Cubes Models to the EAC	295
10.7	Quantum Theory of the EAC	298
10.8	Miscellaneous Topics	305
	References	310
