

CONTENTS

PREFACE	vii
1. INTRODUCTION	1
1.1 Basic Properties of Nuclear Molecules	1
1.2 Historical Overlook	4
2. A BRIEF SURVEY OF ELEMENTARY EXPERIMENTAL DATA	17
2.1 Coulomb Barrier and Sub-Barrier Resonances	17
2.2 Elastic Scattering	20
2.3 Inelastic Scattering	24
2.4 Transfer Reactions	26
2.5 Total Reaction and Fusion Cross Sections	28
2.6 γ -Ray Measurements	32
2.7 Molecular Single-Particle Effects	33
2.8 Intermediate and Heavier Systems	36
3. THEORETICAL BASES FOR NUCLEAR MOLECULES	48
3.1 The Two-Center Shell Model	48
3.2 Potential Resonances	55
4. NUCLEUS-NUCLEUS INTERACTION POTENTIALS	61
4.1 Optical Model Potentials	61
4.2 Sudden and Adiabatic Potentials	64
4.3 Phenomenological Models for Elastic Potentials	68
4.3.1 The Liquid-Drop Model and the Shell Correction Method	69
4.3.2 The Folding Model and the Energy-Density Formalism	71
4.3.3 The Proximity Model	74
4.4 Microscopic Models for Elastic Potentials	76
4.4.1 Two-Center Shell Model Potentials	76

4.4.2	Mass Parameters and Additional Potentials	82
4.5	Imaginary Potentials	85
5.	EXCITATION MECHANISMS AND MODELS FOR MOLECULAR COLLECTIVE STATES	91
5.1	The Double Resonance Mechanism	91
5.2	The Band Crossing Model	97
5.3	The Orbiting Cluster Model	100
5.4	The Molecular Symmetry Model	104
5.5	The Collective Two-Center Models	108
5.5.1	The Model	108
5.5.2	Application to the $^{12}\text{C} + ^{12}\text{C}$ System	114
5.6	The Cluster Model	121
6.	FORMATION AND DECAY WIDTHS OF NUCLEAR MOLECULAR CONFIGURATIONS	124
6.1	Window for Molecular States	125
6.2	Window Effects versus Resonance Models	130
6.3	The Coexistence Model	133
6.4	Shape Isomers in Fission	134
7.	GENERAL THEORY OF HEAVY-ION COLLISIONS	138
7.1	Two Complementary Descriptions	138
7.1.1	Atomic or One-Center Approach	138
7.1.2	Molecular or Two-Center Approach	138
7.2	General Formulations	139
7.3	Feshbach's Projection Operator Method and Optical Model	142
7.4	Generator-Coordinate and Resonating Group Methods	150
7.4.1	Resonating Group Method	151
7.4.2	Generator Coordinate Method	153

7.4.3 Applications	156
8. APPROXIMATE METHODS FOR HEAVY-ION COLLISIONS	158
8.1 The Semiclassical Method	158
8.1.1 Semiclassical Description of Scattering	159
8.1.2 Rainbow Scattering	165
8.1.3 Glory Scattering	167
8.1.4 Orbiting (Spiral) Scattering	168
8.2 The DWBA Method	171
8.2.1 Review of the DWBA Formalism	171
8.2.2 Applications to Heavy-Ion Reactions	177
8.3 Time-Dependent Hartree-Fock Method	182
8.3.1 The TDHF Equations	183
8.3.2 Effective Interactions	187
8.3.3 Methods of Calculation	189
8.3.4 Results for Nuclear Molecules in TDHF	192
8.4 Deep Inelastic Collisions	200
8.4.1 Nuclear Molecules and Nuclear Friction	202
8.4.2 Classical Friction Models	209
8.4.3 Statistical Diffusion Models	217
9. COLLECTIVE MOLECULAR STATES AND COUPLED CHANNELS CALCULATIONS	222
9.1 Introductory Remarks	222
9.2 Coupling Potentials	222
9.3 Elastic and Inelastic Cross Sections	227
9.4 Results for p-Shell Nuclei	229
9.5 Results for s d-Shell Nuclei	233

9.6 Spin Alignments and Magnetic Substate Population	239
10. REACTION THEORY IN THE MOLECULAR PARTICLE-CORE MODEL	249
10.1 The Model and Possible Reaction Channels	249
10.2 The Hamiltonian	253
10.3 Molecular Wave Functions	255
10.4 Coupled Equations	256
10.5 Applications	257
10.5.1 The $^{12}\text{C} + ^{13}\text{C}$ System	257
10.5.2 The $^{13}\text{C} + ^{13}\text{C}$ System	258
10.5.3 The $^{12}\text{C} + ^{17}\text{O}$ System	262
11. MOLECULAR SINGLE-PARTICLE CONFIGURATIONS AND THE NUCLEAR LANDAU-ZENER EFFECT	269
11.1 Two-Center Single-Particle Level Diagrams and Level Crossings	270
11.1.1 Spherical Nuclei and Rotationally Symmetric Deformed Nuclei	270
11.1.2 Arbitrarily Oriented Deformed Nuclei	273
11.1.3 Dynamical Couplings Between Molecular States	279
11.2 Nuclear Landau-Zener Effects	280
11.2.1 Landau-Zener Approximation	280
11.2.2 Semiclassical Approximation Including Turning Point Effects	283
11.3 Applications	287
11.3.1 The $^{12}\text{C} + ^{17}\text{O}$ System	287
11.3.2 The $^{12}\text{C} + ^{18}\text{O}$ System	289
11.4 The Diabatic Two-Center Model	290

12.	MICROSCOPIC MOLECULAR REACTION THEORY IN A PARTICLE-HOLE FORMALISM	297
12.1	Hamiltonian in Coordinate Space	297
12.2	Intrinsic States in Fock Space Representation	300
12.3	Expansion of the Antisymmetrization Operator	303
12.4	Hamiltonian in Fock Space and the Coupled Equations	305
12.5	Application to the $^{12}\text{C} + ^{12}\text{C}$ System	308
13.	THREE-CLUSTER NUCLEAR MOLECULES AND CLUSTER TRANSFER IN HEAVY-ION REACTIONS	312
13.1	Three-Cluster and Many-Cluster Nuclear Molecules	313
13.2	DWBA Formalism for Direct Heavy-Ion Transfer Reactions	315
13.3	Two-Nucleon Transfer Reactions	324
13.4	Three-Nucleon Transfer Reactions	328
13.5	Four-Nucleon Transfer Reactions	330
13.6	Massive Transfer Reactions	336
14.	FRAGMENTATION THEORY AND COLLECTIVE MASS TRANSFER	344
14.1	Introduction	344
14.2	Collective Coordinates	347
14.3	The Collective Energy for the Relative Motion and Mass Transfer	352
14.4	Calculation of the Adiabatic Potentials and Masses	353
14.4.1	Adiabatic Potentials	353
14.4.2	Potentials for Fission and Scattering	355
14.4.3	Adiabatic Masses	360
14.4.4	The Transfer Mass $B_{\eta\eta}$	361
14.5	The Classical Equations of Motion	363
14.6	Quantum Mechanical Description of the Mass Transfer	366

14.7	Mass and Charge Fragmentation in Fission	368
14.7.1	Formalism for Mass and Charge Fragmentation	369
14.7.2	Comparison with Experiments	370
14.7.3	Time-Dependent Treatment of the Elongation	373
14.8	Production of New Heavy Elements	378
14.9	Cluster Radioactivity	389
15.	SPECULATIVE MOLECULAR EFFECTS	395
15.1	Giant Nuclear Molecules	395
15.2	Excitation of Mass Transfer Resonances	402
15.3	Molecules in the Quark Domain and at Relativistic Energies	406
