

CONTENTS

Preface *iii*

List of Tables *ix*

1 INTRODUCTION 1

1.1 Scope of Molecular Spectroscopy 1

1.2 Emission and Absorption Spectroscopy 2

1.3 Resonance Spectroscopy 3

1.4 Electromagnetic Radiation 3

1.5 Applications of Molecular Spectroscopy to Chemistry and Physics 6

2 QUANTUM MECHANICS AND SPECTROSCOPY 9

2.1 Relevance of Quantum Mechanics to Spectroscopy 9

2.2 Wave and Matrix Mechanics 10

2.3 Relationship of Matrix and Wave Mechanics 15

2.4 Intrinsic Spin 17

2.5 Symmetry Properties of Wave Functions; Indistinguishability of Particles 20

3 NATURE AND TREATMENT OF THE MOLECULAR ENERGY TERMS 23

3.1 General Molecular Hamiltonian; Separation of Translational Energy 23

3.2 Molecular Born–Oppenheimer Approximation; Separation of Electronic Energies 28

3.3 Separation of Vibrational and Rotational Energies 33

3.4 Other Molecular Energy Terms, Including External-Field Terms; Perturbations 46

4 ANGULAR MOMENTUM AND HARMONIC OSCILLATION IN MATRIX MECHANICS 53

4.1 Harmonic Oscillator in One Dimension 53

4.2 Angular Momentum Commutation Relations 65

- 4.3 Matrix Elements of Angular Momentum 69
- 4.4 Properties of the Direction Cosines 78
- 5 ABSORPTION OF ELECTROMAGNETIC RADIATION 85
 - 5.1 Calculation of Transition Probabilities by Time-Dependent Perturbation Theory 86
 - 5.2 Transition Probability in a Periodic Perturbation 90
 - 5.3 Electric Dipole Transition Probability 95
 - 5.4 Some More General Considerations 99
 - 5.5 Relationship of Transition Probability to Observable Quantities 103
- 6 GROUP THEORY AND ITS RELATIONSHIP TO QUANTUM MECHANICS AND SPECTROSCOPY 109
 - 6.1 Symmetry Operations and Transformations about a Point 111
 - 6.2 Some Properties of Groups 116
 - 6.3 Theory of Matrix Representations of Groups 122
 - 6.4 Application of Group Theory to Quantum Mechanics 136
- 7 MICROWAVE SPECTROSCOPY 147
 - 7.1 General Characteristics and Experimental Aspects of Microwave Spectroscopy 147
 - 7.2 Principal Axes 153
 - 7.3 Microwave Spectrum of the Linear Molecule 158
 - 7.4 Microwave Spectrum of the Symmetric Rotor Molecule 177
 - 7.5 Microwave Spectrum of the Asymmetric Rotor Molecule 184
 - 7.6 Stark Effect of Linear and Symmetric-Rotor Molecules 204
 - 7.7 Quadrupole Hyperfine Interaction 209
 - 7.8 Hindered Internal Rotation 215
 - 7.9 Structural Determination 218
- 8 INFRARED SPECTROSCOPY 225
 - 8.1 General Characteristics and Experimental Aspects of Infrared Spectroscopy 225
 - 8.2 Infrared Spectra of Diatomic Molecules 230
 - 8.3 Infrared Spectra of Polyatomic Molecules 247
 - 8.4 Group-Theoretical Aspects of Molecular Vibrations 263
 - 8.5 Normal Coordinate Analysis 282
 - 8.6 Some Qualitative Aspects of Vibrational Analyses 305
- 9 NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY 313
 - 9.1 General Characteristics and Experimental Aspects 313
 - 9.2 Behavior of Nuclei in Magnetic Fields 318
 - 9.3 General Features of Liquid and Gas Phase NMR Spectra 327

9.4	Time-Dependent Phenomena	344
9.5	Quantum Mechanical Treatment of Complex NMR Spectra in Liquids	360
9.6	Theory of the Chemical Shift and Spin-Spin Interaction	379
9.7	Other Nuclear Magnetic Resonance Techniques	387
10	ELECTRON PARAMAGNETIC RESONANCE	393
10.1	General Considerations	393
10.2	Energy Levels and Spectrum of the Hydrogen Atom	397
10.3	Spectra of Organic Radicals in Liquid Solutions	403
10.4	Organic Radicals With Triplet States	410
10.5	Electron Paramagnetic Resonance of Transition Metal Complexes	420
10.6	Time-Dependent Phenomena	435
10.7	Theoretical Interpretation of EPR Parameters	437
10.8	Other EPR Studies	444
11	ELECTRONIC SPECTROSCOPY	447
11.1	Introduction	447
11.2	Electronic Spectra of Diatomic Molecules	450
11.3	Electronic States of Diatomic Molecules	464
11.4	Theory of the Electronic Energies of Diatomic Molecules	478
11.5	Electronic Spectra of Polyatomic Molecules	485
11.6	Molecular Orbitals and Spectra of Polyatomic Molecules	492
11.7	Spectra of Transition Metal Complexes	506
APPENDICES		
Appendix A	Classical Mechanics	513
Appendix B	Some Frequently Used Quantum Mechanical Theorems	519
Appendix C	Properties of Matrices	523
Appendix D	Sign Change in Angular Momentum Commutation Relations	531
Appendix E	Character Tables	535
Appendix F	Atomic Masses and Natural Abundances of the Stable Isotopes of Elements with Atomic Number ≤ 54	545
Appendix G	Physical Constants and Conversion Factors	551
Appendix H	Derivation of Eq. (8.128)	553
INDEX
