

CONTENTS

CHAPTER 1.	COLLISIONS, POPULATIONS, ENERGY DISTRIBUTIONS	1
1.1.	Introduction. Types of collision process. Notation	1
1.2.	Collision cross-sections and rate coefficients	9
1.3.	Kinetics of reaction rates	23
1.4.	Velocity and energy distributions	30
1.5.	Convolution and deconvolution of distributions and functions. Apparent cross-sections	39
1.6.	Diffusion of particles	44
1.7.	Thermodynamic equilibria	51
CHAPTER 2.	THEORETICAL BACKGROUND, CLASSICAL AND QUANTUM	57
2.1.	Introduction	57
2.2.	Electron-atom interaction	58
2.3.	Atomic and molecular interactions	59
2.4.	Coordinate systems and energy relations	76
2.5.	Energy losses in collisions between impenetrable elastic spheres	80
2.6.	Classical treatment of some inelastic collision processes	82
2.7.	Classical elastic scattering of atoms in a central force field	85
2.8.	Quantum theory of scattering	92
2.9.	The Born approximation	96
2.10.	The oscillator strength and the Born-Bethe approximation	98
2.11.	More exact quantum theory approximations	100
2.12.	The principle of detailed balancing	106
CHAPTER 3.	THE EXPERIMENTAL METHODS EMPLOYED IN COLLISION PHYSICS	112
3.1.	Introduction	112
3.2.	Crossed and merged beams of particles	112
3.3.	Beams and swarms passing through a gas	118
3.4.	Experiments using plasmas	128
3.5.	Time-dependent and flowing afterglows	147
3.6.	Sources of atomic and molecular beams	153
3.7.	Sources of atomic gases and of radicals	163
3.8.	Sources of electrons	167
3.9.	Sources of photons in the visible and ultra-violet	181
3.10.	Sources of ions	190
3.11.	Sources of excited atoms and molecules	206
3.12.	Velocity selection of atomic and molecular ions	214
3.13.	Velocity selection of electrons	218
3.14.	Velocity and mass selection of ions	234
3.15.	Detection and wavelength measurement of photons	254
3.16.	Detection and counting of charged particles and fast neutrals	261

3.17. Detection of atomic and molecular beams	273
3.18. Detection and identification of atomic species, or radicals	279
3.19. Detection of excited atoms, molecules and ions	281
3.20. Control of experiments	286
CHAPTER 4. THE ELASTIC SCATTERING OF ELECTRONS BY ATOMS AND MOLECULES	305
4.1. Total and differential cross-sections	305
4.2. Resonances in elastic scattering	316
4.3. Electron swarm experiments	323
4.4. Collision frequencies determined by microwave techniques	333
CHAPTER 5. EXCITATION OF ATOMS AND MOLECULES BY ELECTRONS	344
5.1. Theory of electron excitation	344
5.2. Experimental methods of measurement of excitation cross-sections	349
5.3. Techniques of excitation study without detection of photons	353
5.4. Excitation functions close to threshold and maximum	356
5.5. Polarization of radiation from levels excited by electrons	366
5.6. Studies of electron exchange	368
5.7. Excitation of positive ions by electrons	371
5.8. Excitation and dissociation of molecules	373
5.9. Inner shell excitation of atoms	379
CHAPTER 6. IONIZATION BY ELECTRONS	385
6.1. Introduction: classical and quantum calculations	385
6.2. Measurement of total and individual cross-sections	389
6.3. Mass-spectrometry and fragment ion kinetic energy measurement	391
6.4. Total and individual cross-section data	393
6.5. Simultaneous ionization and excitation	399
6.6. Autoionizing states	401
6.7. Threshold ionization and structure	402
6.8. Ionization processes in molecules	411
6.9. Multiply-charged molecular ions	413
6.10. Ionization of positive ions	414
6.11. Fragmentation of metastable molecular ions. Aston bands	417
CHAPTER 7. POSITIVE ION RECOMBINATION	423
7.1. Introduction	423
7.2. Classification of electron-ion recombination processes	424
7.3. The measurement of electron-ion recombination coefficients	431
7.4. Interpretation of afterglow recombination data	437
7.5. Temperature dependence of recombination coefficients	440
7.6. Recombination measurements in high-density plasmas	442
7.7. Recombination of positive and negative ions	443
CHAPTER 8. ELECTRON ATTACHMENT AND DETACHMENT	451
8.1. Negative ions and their electron affinities	451
8.2. Determination of electron affinities	454
8.3. Electron attachment processes. Introduction	456
8.4. Measurement of attachment	457
8.5. Interpretation of attachment data	463
8.6. Photodetachment and radiative attachment	470
8.7. Collisional and associative detachment	475

CHAPTER 9.	PHOTON EMISSION AND ABSORPTION	485
9.1.	The emission and absorption of radiation	485
9.2.	Determination of oscillator strengths	490
9.3.	Oscillator strengths; sum rules and magnitudes	494
9.4.	Photoabsorption processes	495
9.5.	Experimental photoabsorption techniques	497
9.6.	Calculation of photoabsorption and photoionization cross-sections	499
9.7.	Photoabsorption data	501
9.8.	Photo-mass-spectrometry and photoelectron-spectroscopy	510
9.9.	Two-quantum processes	511
CHAPTER 10.	ELASTIC COLLISIONS BETWEEN ATOMIC PARTICLES	518
10.1.	Introduction	518
10.2.	Scattering of fast ions and atoms	518
10.3.	Experimental techniques of fast ion and fast atom scattering	526
10.4.	Interaction energies derived from scattering experiments	527
10.5.	Thermal energy atomic beam scattering	530
10.6.	Gas diffusion	537
10.7.	The mobility of ions in gases	539
10.8.	Theory of ionic mobility; ions in unlike gases	540
10.9.	Theory of ionic mobility; ions in their parent gas	543
10.10.	Experimental methods of mobility measurement	546
10.11.	Interpretation of mobility data	552
10.12.	Clustering, interchange and atmospheric mobilities	558
CHAPTER 11.	IONIZATION AND EXCITATION BY ATOMIC PARTICLES	566
11.1.	Introduction; ionization at low impact energies	566
11.2.	Charge-changing collisions	572
11.3.	Total slow charge collection	577
11.4.	Theory of ionization and comparison with data	581
11.5.	Heavy-particle spectroscopy	587
11.6.	Statistical theory of multiple ionization. The 'transferred energy'	590
11.7.	Excitation by atomic and molecular particles	602
CHAPTER 12.	CHARGE TRANSFER PROCESSES	612
12.1.	Introduction; theory of symmetrical resonance processes	612
12.2.	Charge transfer between unlike ions and atoms. The adiabatic criterion	621
12.3.	Experimental methods of charge transfer measurement	627
12.4.	Accidental resonance conditions	632
12.5.	The role of excited states. Experiments with excited and ground state ions	634
12.6.	Processes terminating in excited species	637
12.7.	Differential scattering with capture. Oscillatory structure	639
12.8.	Behaviour of inelastic ion-atom collision cross-sections at high energies	642
12.9.	Ionization with capture	645
12.10.	Pseudo-crossing potential energy curves	646
12.11.	Radiative charge transfer	651
12.12.	Two-electron capture processes	651
12.13.	Negative ion charge transfer	652
CHAPTER 13.	COLLISIONS OF EXCITED SPECIES	659
13.1.	Line broadening	659
13.2.	Collision-induced radiation	663
13.3.	Excitation exchange (sensitized fluorescence) and quenching	664

13.4. Metastable and long-lifetime excited species	672
13.5. Scattering and deactivation of metastables	675
13.6. Electron and photon collisions with metastables	680
13.7. Production of ions in collisions of metastables with atoms and molecules	681
13.8. Collision processes of vibrationally and rotationally excited molecules	685
CHAPTER 14. CHEMICAL INTERCHANGE COLLISIONS	697
14.1. Ion-molecule reaction classification. Techniques of total cross-section measurement	697
14.2. Analysis of the ion-atom interchange data	705
14.3. Chemical interchange processes between neutral species	711
APPENDIX	719
A.1. Atomic constants and conversion factors for systems of units	719
A.2. Stepwise ionization potentials of atoms	721
A.3. First ionization potentials of some molecules and radicals	724
A.4. Some important atomic energy levels	725
A.5. Atomic selection rules for electric dipole radiation	727
A.6. Simplified diatomic molecular selection rules for electric dipole radiation	728
A.7. Wigner-Witmer rules	730
A.8. Dissociation energies of some molecules and radicals	732
A.9. Dipole moments and scalar polarizabilities	732
A.10. Potential energy diagrams for some diatomic molecules	733
A.11. Some important meetings on atomic collisions and related fields	739
Author Index	741
Chemical Formula Index	757
Subject Index	763
