Acknowledgements	11
List of symbols and units	13
List of abbreviations	17
Introduction	19
1. The nuclear atom	21
Constituents of the atom and nucleus	21
Nomenclature and definitions	21
Masses and units	23
The binding energy	25
Dimensions of the atom and its nucleus	25
The density of the nucleus	25
2. Atomic physics	27
The Bohr model of the atom	27
Wave mechanical approach	31
Quantum numbers	33
The Pauli exclusion principle	36
The atomic shell model	36
References	37

3. Nuclear forces	38
Strong nuclear forces	38
The fact that nuclear forces are attractive	39
The fact that nuclear forces are short range	39
Charge independence	41
Dependence on the direction of spin	42
The fact that nuclear forces become repulsive at short range	44
The nature of nuclear forces	45
The weak nuclear force	48
References	48
4. An introduction to nuclear models	49
The need for nuclear models	49
The Bohr liquid drop model of the nucleus	50
The Fermi gas model	50
Nuclear shell model	54
The excited states of the nucleus	58
Characteristics of the excited states of the nucleus	59
The α particle and cluster models	63
The optical model	63
The collective model	65
References	67
5. Nuclear reactions	68
Classification of reactions	68
Reaction mechanisms	70
The kinetics of nuclear reactions	72
Conservation of total energy	72
Conservation of linear momentum	73
Reaction probabilities	77
Cross section	77
Factors affecting cross sections	80
Reaction kinetics	80
The potential barrier (for charged incident particles)	81
Resonance effects	84
Shell structure	88
Geometric cross section	88
Weak interactions	88
References	89
6. Nuclear stability	90
Nuclear de-excitation	90
Successive decays	92
γ emission	93

Concave emissions	96
Nuclear isomerism	96
Internal conversion	97
Internal pair production	98
The neutron-to-proton ratio	99
β decay	100
The mechanism of β decay	102
The electron capture process	105
Factors affecting the half-lives of β decay processes	105
The Fermi theory of β decay	106
Super-allowed transitions	108
The search for the neutrino	110
Non-conservation of parity in β decay	113
De-excitation by the emission of nucleons	114
α decay	115
Emission of other nucleons	120
Natural radioactivity	120
The transuranic nuclei	121
The naturally occurring reactor at Gabon	121
The experiment of Hahn and Strassmann	121
Fission product nuclei	123
References	126
7. Accelerators	127
Direct accelerators	127
The Van de Graaff accelerator	128
The SAMES accelerator	134
The Cockcroft–Walton accelerator	134
The Dynamitron accelerator	136
Indirect accelerators	138
The linear accelerator	138
The cyclotron	140
The synchrocyclotron	145
The proton synchrotron	145
Energy measurement by beam deflection	149
Electrostatic beam energy measurements	149
Magnetic deflection systems	151
References	152
8. Non-nuclear interactions of radiation with matter	153
Heavy charged particles	153
The range of heavy charged particles	156
Straggling	158
Rutherford scattering	159

Electrons	160
Ionisation and radiation loss	160
Cerenkov radiation	164
γ -rays	165
The photoelectric effect	165
Compton scattering	167
Pair production	168
Total absorption coefficient	168
X-rays	169
Bragg diffraction	170
Neutrons	171
References	172
9. Radiation detectors	173
Gas-filled counters	173
Spark chambers	178
Scintillation counters	180
Cerenkov counters	186
Solid state detectors	186
Silicon p-n junction detectors	186
Lithium-drifted germanium detectors	188
Non-electronic detectors	189
The Wilson cloud chamber	189
The bubble chamber	190
Nuclear emulsion plates	190
'Solid state' nuclear track detectors	192
Radiation monitors	193
Radiation units and doses	193
The film badge	195
The pocket ionisation chamber	196
The Thermoluminescent detectors	197
References	197
10. Frames of reference and neutron moderation	198
Laboratory and centre-of-mass frames of reference	198
Neutron moderation	203
Thermal neutron energy spectrum	205
Properties of moderators	208
Non-reactor applications	210
References	213
11. The production and application of neutrons and analysis by charged particles	214
Neutron production	214

The use of radioactive isotopes	215
α -induced reactions	215
γ -induced reactions	217
Neutrons from accelerated particle interactions	218
Exochemic and endothermic reactions	218
The neutron howitzer	223
Research reactors	225
Some applications of neutrons	228
Neutron radiography	228
Neutron therapy	233
Neutron activation	235
Thermal neutron activation analysis	236
Fast neutron activation	238
Analysis by charged particles	240
References	242
12. Nuclear fission	244
The fission process	244
The energy release at fission	246
The fission neutron spectrum	247
The fission chain reaction in natural uranium	248
The four-factor formula	252
Factors affecting reactivity	254
Critical size	254
²³⁵ U burn-up	257
Fission product poisons	259
Reactor control	261
References	265
13. Nuclear fusion	266
Exothermic fusion reactions	266
Energy losses, break-even temperature	271
The Lawson criterion	272
The experiment of Kurchatov	273
The toroidal pinch	275
The stellarator programme	279
Plasma β values	280
Tokamak experiments	281
Magnetic bottle confinement	282
Particle-injected tokamak experiments	288
Possible advantages of fusion over fission as an energy source	294
A possible fusion reactor based on a particle-injected tokamak	295
Inertial confinement	296
References	298

14. Commerical reactors	299
Thermal efficiency	299
Commercial reactor types	300
Gas-cooled reactors	300
Magnox or Graphite-Gaz reactors	300
Advanced gas-cooled reactors	303
High temperature reactors	305
Water-cooled reactors	307
Pressurised heavy-water-cooled reactors (CANDU) ...	307
Pressurised light-water-cooled-and moderated reactors .	309
Pressurised water reactors (PWR)	309
Boiling-water reactors (BWR)	311
Steam-generating heavy-water reactors	312
Graphite-moderated boiling-water reactors	313
Reactor performance by type	314
The economics of nuclear power	315
National nuclear programmes	320
References	322
15. Fuel reserves and breeder reactors	323
Fuel reserves	323
Fast breeder reactors	330
The need and timing for fast breeder reactors	335
Plutonium supplies	335
The thorium cycle	338
References	340
16. Nuclear safety and environmental impact	341
The biological effects of radiation	341
Discharges from power stations	345
Fission product waste	345
Intermediate and low activity solid waste	348
Total environmental dose rate	349
Reactor safety	349
Principles of hazard assessment	350
Power excursions or reactor run-away	352
Loss-of-coolant accident	354
Fire hazards	355
Seismic disturbances	357
Reactor accidents	357
Three Mile Island (28 March 1979)	358
Chernobyl (26 April 1986)	361
References	366
Index	367
