Preface	V
Part I Preparation and Decomposition of Positive and Negative Ions: Experimental Techniques and Instrumentation	
E. Illenberger	1
1 Some General Remarks on Positive and Negative Ions, Photoionization, and Electron Attachment	1
<i>References</i>	6
2 Experimental Methods	8
2.1 Photoelectron Spectroscopy (PES)	8
2.2 Photoionization Mass Spectrometry (PIMS)	11
2.3 Photoelectron-Photoion Coincidence Spectroscopy (PEPICO).....	13
2.4 Electron Attachment Spectroscopy (EAS)	17
2.5 Electron Transmission Spectroscopy (ETS)	21
2.6 Photodetachment Spectroscopy	25
<i>References</i>	27
3 Instrumentation	30
3.1 Light Sources and Monochromators	30
3.1.1 Line Sources	30
3.1.2 Continuum Sources	31
3.1.3 Dispersive Elements / Monochromators	33
3.2 Electron Energy Analyzers and Monochromators	36
3.2.1 Retarding Field Analyzer	37
3.2.2 Parallel Plate Analyzer	39
3.2.3 127° Cylinder Filter	42
3.2.4 Hemispherical Analyzer	43
3.2.5 Cylindric Mirror Analyzer	44
3.2.6 Trochoidal Electron Filter	45
3.2.7 Wien Filter	46
3.2.8 Threshold Photoelectron Analyzer	47

Contents	IX
3.2.9 Further Spectrometers and Limiting Effects on Energy Resolution	48
3.3 Mass Spectrometers	51
3.3.1 Principles of Mass Analysis	51
3.3.2 Double Focusing Magnetic Sector Mass Analyzers	54
3.3.3 Time-of-Flight Mass Spectrometers and Reflectrons	57
3.3.4 Quadrupole Mass Spectrometers	64
3.3.5 Ion Cyclotron Resonance (ICR) Mass Spectrometers	67
3.3.6 Other Mass Analyzers	69
3.4 Detectors	70
3.4.1 Faraday Cup Collectors	70
3.4.2 Electron Multipliers, Channeltrons, Channelplates	71
3.4.3 VUV Light Detectors	73
<i>References</i>	74

Part II The Monomolecular Decay of Electronically Excited Molecular Ions

J. Momigny

Introduction

1 Ionization Processes in Gaseous Phase

1.1 Resonant Photon Absorption and Photoionization

1.1.1 Absorption and Photoionization Cross-Sections; Ion Yields; Mass Spectrum

1.1.2 A Model for the Appearance of the Mass Spectrum of Diatomic Molecules

1.1.3 Threshold Laws and Ionization Yield Curves for Diatomic Molecules

1.1.4 Time Windows for the Appearance of the Mass Spectrum

1.1.5 Origin and Decay of Superexcited States (SE)

1.1.5.1 Origin of SE in Atoms

1.1.5.2 Origin of Superexcited States in Molecules

1.1.5.3 Non Franck-Condon Populations of Electronic States of Ions through the Decay of Superexcited States

1.1.6 Ionization Yield Curves for Polyatomic Molecules

1.1.7 Concluding Remarks

1.2 Refined Details about Photoionization Processes. Photoelectron Spectroscopies

1.2.1 Photoelectrons as Footprints of the Ionization Processes

1.2.2 Non-Resonant Photoelectron Spectroscopy

1.2.3	Photoelectron Spectrum and Molecular Orbitals	100
1.2.4	Constant Photoelectron Energy Spectroscopy	105
1.3	Photoion-Photoelectron Coincidence Methods	107
1.3.1	Generalities about Photoion-Photoelectron Coincidence Methods	107
1.3.2	Non-Resonant PIPECO Mass Spectra	108
1.3.3	Resonant PIPECO Mass Spectra	112
1.3.4	From Photoionization Yield Curves to the Breakdown Diagram: an Old-Fashioned Way	112
1.4	Electroionization	114
1.4.1	Resonant Electroionization	114
1.4.2	High-Energy Electron Impact: Photon Simulation	115
1.5	Charge Exchange Ionization	119
1.5.1	Introduction to Charge Exchange Physics and to Charge Exchange Mass Spectra	119
1.5.2	A first Approach to the Measurement of the Rate Constant for Dissociative Ionization as a Function of Internal Energy	122
1.6	Field Ionization	124
1.6.1	Description of the Process	124
1.6.2	Lifetimes of Field Ionized Molecular Ions	125
1.7	Penning Ionization	126
1.7.1	General Description and Considerations	126
	<i>References</i>	128
2	The Occurrence of Transitions between the Electronic States of Molecular Ions	132
	Introduction	132
2.1	Non-Radiative Transitions between Electronic States	132
2.1.1	Non-Adiabatic Interactions between Electronic States	132
2.1.2	Allowed and Avoided Crossings between Potential Energy Curves	133
2.1.3	Crossings between Energy Hypersurfaces – Conical Intersections	135
2.1.4	Non-Adiabatic Interactions and the Time Scale for Energy Redistribution	137
2.2	Radiative Transitions between Electronic States of Molecular Ions	138
	<i>References</i>	139
3	Energy Balance in the Dissociation Processes of Molecular Ions	141
3.1	Experimental Approach to the Thermochemistry of Dissociation Processes	141

Contents	XI	
3.1.1	Threshold Energies for Dissociation. Appearance Energies	141
3.1.2	Kinetic-Energy-Distribution Measurements	144
3.1.3	Influence of Lifetimes of the Molecular Ions on <i>AE</i> Measurement. Kinetic Shift	146
3.2	The Concept of Ion Structure	147
3.2.1	General Considerations	147
3.2.2	Quantum Mechanically Calculated Energies and Geometries of Ions	148
3.2.3	Determination of Ion Structure through ΔH_f (Ions)	149
3.2.4	Evaluation of ΔH_f (Molecules) and of ΔH_f (Ions) through Group Contribution Schemes and from a Macroincrementation Approach .	152
3.2.5	The Metastable Peak Observation	154
3.2.6	The Collision-Induced Dissociation of Ions	158
3.2.7	The Ion Cyclotron Resonance Method	161
3.2.8	The Collision-Induced Dissociative Ionization of Neutrals (CIDI) . .	163
3.2.9	Photoabsorption and Photodissociation of Ions	166
	<i>References</i>	167

4 Statistical Theories for Unimolecular Rate Constant Calculation in Isolated Systems 170

Introduction 170

4.1	The First Approach of Unimolecular Reaction Rate Theories	170
4.1.1	Basic Assumptions of RRKM and QET Methods	170
4.1.2	The RRKM Expression for $k(E)$	171
4.1.2.1	Dissociation Rate Constant of a Diatomic Molecule	171
4.1.2.2	Dissociation Rate Constants for a Polyatomic Molecule	174
4.1.2.3	Quantum Effects in the Vicinity of the Potential Barrier	175
4.1.2.4	Degeneracy of the Reaction Path	176
4.1.2.5	The Most General $k(E)$ Expression	176
4.1.3	Potential Energy Profile along the Reaction Path	177
4.1.4	Transition States	179
4.2	The Evaluation of Sums and Densities of Molecular Quantum States	180
4.2.1	Terminology, Definitions, Assumptions	180
4.2.2	Evaluation of $W(E)$ and $G(E)$ by Direct Count	182
4.2.3	$N(E)$ and $G(E)$ from the Inversion of Partition Functions	182
4.2.3.1	Inversion of the Semiclassical Partition Function	182
4.2.3.2	Approximations to $N(E)$ and $G(E)$ for Rotational States	183
4.2.3.3	Inversion of the Partition Function for Vibrational States	184
4.2.3.4	Vibrorotational States Density and Number	185

4.3	Expressions of $k(E)$ in Classical Approximations	186
4.3.1	The Energized Molecule is Considered as a Collection of Harmonic Vibrators	186
4.3.2	The Energized Molecule is a Collection of Uncoupled Harmonic Oscillators and Independent Internal Rotators	186
4.4	Critiques and Improvements of the Classical Approximation to $N_{vr}(E)$ and $G_{vr}(E)$	187
4.4.1	The Marcus-Rice and Whitten-Rabinovitch Approximations	187
4.4.2	The Inversion of the Quantum Partition Function	189
4.5	Tests for the Validity of RRKM Calculations	191
4.5.1	Breakdown Diagrams – Mass Spectra	191
4.5.2	The Threshold Value of the Rate Constant	193
4.5.3	Calculated and Measured $k(E)$ Values	194
4.5.4	Kinetic Energy Distributions of Fragmentary Ions	196
4.5.5	A Statistical Description of Kinetic Energy Distributions after Dissociation	199
4.6	Some Improvements to the RRKM Theory	202
4.6.1	Improvements in the Localization of Transition-State Configuration	203
4.6.2	An RRKM Theory without Transition State	203
4.6.3	An Interesting Step on the Way to Microscopic Reversibility: the Ion-Dipole Transient Complexes	205
4.6.4	RRKM Calculations Supported by Ab Initio Calculated Potential Energy Surfaces	206
	Conclusions	208
	References	209
5	Miscellaneous Useful Topics in Molecular Ion Dissociation Phenomena	212
5.1	Appearance of Fragmentary Ions from Isolated Electronic States	212
5.1.1	The Vinyl Fluoride Case	212
5.1.2	The <i>Cis</i> - and <i>Trans</i> -Difluoroethylenes	213
5.1.3	The Benzene Cation	215
5.2	Indirect Population of Electronic States in Complex Molecular Ions	217
5.2.1	The $\text{CH}_3\text{F}^+ \rightarrow \text{CH}_3^+ + \text{F}$ Channels	217
5.2.2	The $\text{C}_2\text{H}_3^+ + \text{Cl}$ and $\text{C}_2\text{H}_2^+ + \text{HCl}$ Channels from $\text{C}_2\text{H}_3\text{Cl}$	218
5.3	Tunneling through Potential Barriers – The Rotational Predissociation	221
5.4	Non-Adiabatic Spin-Forbidden Interactions	225
5.4.1	The Appearance of CD_2O^+ from CD_3OH^+	226

Contents	XIII
5.4.2 The Dissociation of CHO_2^+ Ions	227
<i>References</i>	227
Appendix	230
An Example of RRKM Calculation	232
Part III Electron Attachment Processes in Molecules and Molecular Aggregates	
E. Illenberger	241
1 Negative Ions in the Gas Phase	241
1.1 Stability of Negative Ions, Electron Affinity	241
1.2 Formation of Temporary Negative Ions by Free Electron Attachment	249
1.3 Decomposition Reactions of Temporary Negative Ions	254
1.4 Experimental Methods to Study Electron Attachment	260
<i>References</i>	262
2 Electron Attachment Spectroscopy	264
2.1 Experimental Considerations	264
2.2 Ion Yield Curves	267
2.2.1 SF_6 and SF_5NCO	267
2.2.2 Chlorofluoromethanes	271
2.3 Excess Energy	274
2.3.1 Flight Times of Ions	275
2.3.1.1 Thermal Ions	278
2.3.1.2 Ions with Excess Energy	279
2.3.2 Tetrafluoromethane. Energy Distribution of Products	282
2.3.3 CF_3Cl and CF_3CN . An Example of Two Completely Different Decomposition Mechanisms	285
2.3.4 Methanol, Deuterated Methanol and Allyl alcohol	289
2.4 Electron Attachment to Excited Molecules	292
<i>References</i>	294
3 Negative Ions Observed in Electron Transmission and Electron Attachment Spectroscopy	299
3.1 Experimental Considerations	299

3.2	Ethylene and Fluoroethylenes. Energy of π^* MOs and Decomposition of Transient Negative Ions	301
	<i>References</i>	308
4	Electron Attachment to Molecular Clusters and Condensed Molecules .	311
4.1	Experimental Considerations	311
4.2	Electron Capture by Clusters of CF_3Cl and CF_4	316
4.3	Electron Capture Induced Processes in $(\text{C}_2\text{F}_4)_n$ and $(\text{CF}_3\text{Cl})_m \cdot (\text{H}_2\text{O})_n$	324
4.4	Dissociative Electron Attachment from Condensed Molecules	330
	<i>References</i>	334
	Subject Index	339
