

Contents

PART I. DESCRIPTION OF COLLISION PROCESSES

<i>Chapter 1. Basic Definitions</i>	3
1.1. Types of collisions	3
1.2. Channels	5
1.3. Cross sections. Laboratory and center of mass systems	6
<i>Chapter 2. Kinematics</i>	13
2.1. Non-relativistic kinematics	13
2.2. Relativistic kinematics	22
<i>Problems to Part I</i>	37

PART II. POTENTIAL SCATTERING

<i>Chapter 3. Potential Scattering: General Features</i>	45
3.1. Separation of the center of mass motion in a two-body problem	45
3.2. The stationary scattering wave function	48
3.3. Cross sections	50
3.4. The optical theorem	53
3.5. Potential scattering of wave packets	55
<i>Chapter 4. The Method of Partial Waves</i>	62
4.1. The partial wave analysis	62
4.2. Optical theorem and unitarity relation	76
4.3. The phase shifts	78

- 4.4. Examples 86
- 4.5. Resonances 93
- 4.6. Absorption processes. Scattering by a complex potential 105

Chapter 5. The Integral Equation of Potential Scattering 112

- 5.1. The Schrödinger equation as an integral equation 112
- 5.2. The Green's function 114
- 5.3. The Lippmann–Schwinger equation 117
- 5.4. Compact solutions of the Lippmann–Schwinger equation. Integral representations of the scattering amplitude 119
- 5.5. Partial wave analysis of the Lippmann–Schwinger equation 121
- 5.6. The Lippmann–Schwinger equation and the Fredholm method 125
- 5.7. Non-local potentials 130

Chapter 6. The Coulomb Potential 133

- 6.1. The Coulomb potential in parabolic coordinates 134
- 6.2. Partial wave decomposition 141
- 6.3. Scattering by a modified Coulomb field 144

Chapter 7. The Scattering of Identical Particles 148

- 7.1. The symmetrization postulate. Bosons and fermions 148
- 7.2. Boson–boson scattering 152
- 7.3. Fermion–fermion scattering 156

Chapter 8. The Born Series 161

- 8.1. The Born expansion as a perturbation series 161
- 8.2. The first Born approximation 164
- 8.3. The Born series 166
- 8.4. Convergence of the Born series 168
- 8.5. The Born series for partial waves 171
- 8.6. Examples 172

Chapter 9. Semi-Classical Approximations 188

- 9.1. The eikonal approximation 188
- 9.2. The WKB method 210

Chapter 10. Variational Methods 225

- 10.1. The Hulthén–Kohn variational principle 226
- 10.2. The Schwinger variational principle 233
- 10.3. Minimum principles in scattering theory 238

<i>Chapter 11. Analytic Properties of Scattering Amplitudes</i>	243
11.1. The Jost functions	243
11.2. The S -matrix	252
11.3. The Levinson theorem	258
11.4. Complex angular momenta. Regge poles	260
11.5. Dispersion relations	271
11.6. Effective range theory	286
 <i>Chapter 12. Time-Dependent Potential Scattering</i>	 297
12.1. Time-dependent Green's functions	297
12.2. Time-dependent integral equations	302
12.3. Time-dependent perturbation theory	305
12.4. Transition probabilities and cross sections	310
 <i>Problems to Part II</i>	 315
 PART III. GENERAL SCATTERING THEORY	
 <i>Chapter 13. Quantum Dynamics</i>	 331
13.1. The Schrödinger picture	331
13.2. The Heisenberg picture	334
13.3. The interaction picture	337
13.4. Dyson's perturbation expansion for the evolution operator	340
 <i>Chapter 14. The Collision Matrix</i>	 344
14.1. The passage to infinite times. The Møller operators	344
14.2. The S -matrix	355
14.3. Green's operators	361
14.4. The T -matrix	368
 <i>Chapter 15. Transition Probabilities and Cross Sections</i>	 375
15.1. Transition probabilities	375
15.2. Cross sections and lifetimes	379
15.3. Lorentz invariance	384
15.4. Phase space considerations	388
15.5. Scattering systems in mixed states. The density matrix	389
15.6. Unitarity relations and the optical theorem	399
 <i>Chapter 16. The Determination of the Collision Matrix</i>	 403
16.1. The Lippmann-Schwinger equations	403
16.2. The Born series	409

- 16.3. Variational principles 411
- 16.4. The Low equations 414
- 16.5. The reaction matrix and the Heitler integral equations 416
- 16.6. Collisions involving identical particles 421
- 16.7. Invariance principles and the collision matrix 429

Chapter 17. Two-Potential Scattering 442

- 17.1. The Furry picture 442
- 17.2. Generalized Lippmann–Schwinger equations 445
- 17.3. The two-potential formulae 446
- 17.4. Distorted wave Born series 449

PART IV: APPLICATIONS

Chapter 18. Two-Body Collisions 455

- 18.1. Central forces 455
- 18.2. Non-central forces. General theory 467
- 18.3. Scattering of spin zero by spin one-half particles 488
- 18.4. Hadronic collisions at high energies 503

Chapter 19. Three-Body Problems 512

- 19.1. Definitions and notations 512
- 19.2. Difficulties with the Lippmann–Schwinger equations 517
- 19.3. The Faddeev equations 519
- 19.4. Multiple scattering expansions 528
- 19.5. Electron–hydrogen collisions 536
- 19.6. High-energy hadron–deuteron scattering 564

Chapter 20. The Optical Potential 576

- 20.1. Elastic scattering and the optical potential 577
- 20.2. The optical potential and the many-body problem 588
- 20.3. High-energy elastic hadron–nucleus scattering 599
- 20.4. Elastic scattering of charged particles by atoms 607

Chapter 21. Topics in Multiparticle Collisions 622

- 21.1. Electron–helium collisions 622
- 21.2. Nuclear stripping and pick-up reactions 629
- 21.3. Final state interactions 640

APPENDICES

- A. Principles of Quantum Mechanics 657
- B. Legendre polynomials, associated Legendre functions and spherical harmonics 666
- C. Spherical Bessel functions 673
- D. Dalitz integrals 678
- E. Vector addition coefficients and 3- j symbols 682
- F. The Wigner simplified rotation matrices 685
