

## CONTENTS

Preface	v
<b>PART I: INTRODUCTION TO GRAND UNIFIED THEORIES</b> A. Masiero	1
<b>PART II: CALCULATIONAL SCHEMES IN GUTs</b> C. Kounnas	145
<b>PART III: THE PHYSICS OF SUPERSYMMETRY AND SUPERGRAVITY</b> D. V. Nanopoulos	283
<b>PART IV: COSMOLOGY AND GUTs</b> K. A. Olive	347

## CONTENTS

1.	THE STANDARD MODEL: A CRITICAL APPRAISAL	
1.1	The “Low Energy” Limit of Renormalizable Gauge Theories	5
1.2	The Standard Model: Its Purity	8
1.3	The Standard Model: Its Impurity	13
1.4	Vices and Virtues of the Standard Model	17
2.	INTRODUCTION TO GRAND UNIFIED THEORIES	
2.1	When “Strong” and “Weak” Merge Together	20
2.2	The “Big Desert” Picture of the World	25
2.3	A Persistent Cloud: The Hierarchy Problem	28
3.	PHENOMENOLOGICAL CONSEQUENCES OF GUTs	
3.1	What is New in GUTs	30
3.2	General Features of the B and L Violating Processes	32
4.	A FIRST GLIMPSE AT THE SU(5) MODEL	
4.1	Why SU(5)?	41
4.2	The Higgs Sector and the Hierarchy Nightmare	49
5.	LOW ENERGY PHENOMENOLOGICAL CONSEQUENCES OF SU(5)	
5.1	The Successful $\sin^2\theta_W$ Prediction of SU(5)	55
5.2	Fermion Masses in SU(5)	58
5.3	Mixing Angles and Phases	64
5.4	Proton Lifetime: A Death Blow to the SU(5) Model?	68
5.5	B-L and Neutrino Masses in SU(5)	75
5.6	SU(5): A Final Score	78
6.	NEW PHYSICS NOT FAR FROM THE FERMI SCALE?	
6.1	Left-Right Symmetry: A Fundamental Symmetry?	82
6.2	Massive Majorana Neutrinos	87
6.3	Neutron-Antineutron Oscillations	89
6.4	Lepton Number as a Fourth Colour	96

<b>7. THE SO(10) MODEL</b>	
7.1 Few Generalities on the Orthogonal Groups	98
7.2 The SO(10) Gauge Interactions	100
7.3 Patterns of Symmetry Breaking in the SO(10) Model	109
7.4 The Fermion Mass Spectrum	113
7.5 The Question of the Neutrino Mass	115
<b>8. PHENOMENOLOGY OF THE INTERMEDIATE MASS SCALES</b>	
8.1 Renormalization Group Equations in the Presence of IMS	120
8.2 $M_I$ and $M_X$ in IMS models	122
8.3 Higgs Contributions to the $\beta$ -Functions	124
8.4 Phenomenological Consequences of IMS	126
<b>9. A GENERAL OUTLOOK ON GUTs</b>	
9.1 General Constraints on GUTs	130
9.2 Major Unsolved Questions in GUTs	136
<b>Bibliography</b>	<b>138</b>
<b>References</b>	<b>138</b>

## CONTENTS

1. Introduction	147
2. Mass Spectrum in a Spontaneously Broken Theory SU(5) – Minimal Model	150
3. Renormalization and Renormalization Group Equation (R. G. E.)	158
4. Step Approximation and Decoupling Theorem	165
5. Notion of the Effective Coupling Constant	169
6. First Estimation of $M_X$ , $\alpha(M_X)$ and $\sin^2\theta(M_W)$	172
7. Renormalization Properties and Photon-Z Mixing	179
8. $\beta$ -Function Definitions	188
9. Threshold Functions and Decoupling Theorem	193
10. $M_X$ -Determination	206
11. Proton Lifetime	213
12. $\sin^2\theta(\mu)$ -Determination	223
13. Quark-Lepton Mass Relations ( $m_b/m_\tau$ )	226
14. Overview of the Conventional GUTs – Hierarchy Problem	230
15. Stability of Hierarchy – Supersymmetric GUTs	233
16. Cosmologically Acceptable SUSY GUT Models	241
17. Radiative Breaking of $SU(2) \times U(1) - M_W/M_X$ Hierarchy Generation	254
18. No Scale Supergravity Models – Dynamical Determination of $(M_B - M_F)$	268
19. Conclusion	274
References	276

**CONTENTS**

1. Motivation(s) for Supersymmetry	285
2. Supersymmetry (SUSY)	288
3. Physical Properties of Supersymmetry	292
4. "Low Energy" Physics and SUSY	301
5. Supersymmetric GUTs	305
6. Physical Structure of Simple ( $N = 1$ ) Supergravity	311
7. Physics with Simple ( $N = 1$ ) Supergravity	319
A. Physics around the GUT scale ( $M_X$ )	319
B. Physics around the electroweak ( $e - w$ ) scale ( $M_W$ )	324
C. No-scale models	335
References	340

**CONTENTS**

<b>Introduction</b>	<b>349</b>
1. <b>Essentials from General Relativity</b>	<b>350</b>
2. <b>Standard Cosmological Models</b>	<b>355</b>
3. <b>Big Bang Nucleosynthesis</b>	<b>371</b>
4. <b>Limits on Neutrino Masses</b>	<b>383</b>
5. <b>Big Bang Baryosynthesis</b>	<b>388</b>
6. <b>Cosmological Problems</b>	<b>403</b>
7. <b>The Inflationary Universe</b>	<b>406</b>
<b>Bibliography</b>	<b>420</b>
<b>References</b>	<b>421</b>
