<i>Preface</i>	vii
Chapter 1 Introduction	
1.1 What Is a Perturbation?	1
1.2 Structural Models	10
1.3 Elementary Properties of Angular Momenta in Diatomic Molecules	13
1.4 Estimation of Parameters in a Model Hamiltonian Data Compilations References	24 26 26
Chapter 2 Terms Neglected in the Born–Oppenheimer Approximation	
2.1 The Born–Oppenheimer Approximation	29
2.2 Basis Functions	40
2.3 Electrostatic Perturbations	70
2.4 Spin Part of the Hamiltonian	87
2.5 Rotational Perturbations References	115 131
Chapter 3 Methods of Deperturbation	
3.1 Variational Calculations	136
3.2 The Van Vleck Transformation and Effective Hamiltonians	139
3.3 Approximate Solutions	145
3.4 Exact Solutions	150
3.5 Typical Examples of Fitted Perturbations References	169 173
Chapter 4 Interpretation of the Perturbation Matrix Elements	
4.1 Calculation of the Vibrational Factor	179
4.2 Order of Magnitude of Electrostatic	

Perturbation Parameters: Interactions between Valence and Rydberg States of the Same Symmetry	206
4.3 Order of Magnitude of Spin Parameters	216
4.4 Order of Magnitude of Rotational Perturbation Parameters	225
4.5 Pure Precession Approximation	226
4.6 <i>R</i> -Dependence of the Spin Interaction Parameters	232
4.7 Beyond the Single-Configuration Approximation	237
4.8 Identification and Location of Metastable States by Perturbation Effects	238
References	239
Chapter 5 Effects of Perturbations on Transition Intensities	
5.1 Intensity Factors	244
5.2 Intensity Borrowing	247
5.3 Interference Effects	257
5.4 Forbidden Transitions; Intensity Borrowing by Mixing with a Remote Perturber	283
5.5 Special Effects	289
References	327
Chapter 6 Predissociation	
6.1 Introduction to Predissociation	331
6.2 Experimental Aspects of Predissociation	333
6.3 Theoretical Expressions for Widths and Level Shifts	344
6.4 Mulliken's Classification of Predissociations	349
6.5 The Vibrational Factor	354
6.6 The Electronic Interaction Strength	357
6.7 Interference Effects	361
6.8 Isotope Effects	364
6.9 Examples of Predissociation	366
6.10 Case of Intermediate Coupling Strength	372
6.11 Indirect (Accidental) Predissociation	375
6.12 Some Recipes for Interpretation	379
References	381
Chapter 7 Autoionization	
7.1 Experimental Aspects	383
7.2 The Nature of Autoionized States	387
7.3 Autoionization Widths	389
7.4 Rotational Autoionization	392
7.5 Vibrational Autoionization	396
7.6 Spin-Orbit Autoionization	401
7.7 Electronic (or Electrostatic) Autoionization	405
7.8 Validity of the Approximations	407
References	411
<i>Index</i>	413
