CHAPTER 1. DRIFT TUBE STUDIES OF THE TRANSPORT PROPERTIES AND REACTIONS OF SLOW IONS IN GASES

E. W. McDANIEL

| | |
|---|----|
| 1-0. INTRODUCTION | 3 |
| 1-1. THE MOTION OF SLOW IONS THROUGH GASES | 3 |
| 1-2. CLASSICAL MOBILITY THEORY | 6 |
| A. Langevin's theories | 6 |
| B. The Chapman-Enskog theory | 9 |
| C. Wannier's theory | 10 |
| D. Kihara's theory | 12 |
| E. Mason and Schamp's calculation | 12 |
| F. Perel's theory | 13 |
| 1-3. QUANTUM MECHANICAL MOBILITY THEORY | 13 |
| 1-4. THE MOBILITY OF IONS IN BINARY GAS MIXTURES; BLANC'S LAW | 15 |
| 1-5. DRIFT TUBE MEASUREMENTS - GENERAL CONSIDERATIONS | 17 |
| A. Drift velocities | 19 |
| B. Diffusion coefficients | 20 |
| C. Reaction rate coefficients | 22 |
| D. Binding energies of molecular ions | 23 |
| 1-6. EXPERIMENTAL APPARATUS | 23 |
| 1-7. MATHEMATICAL ANALYSIS OF THE SPACE-TIME BEHAVIOR OF A DRIFTING ION SWARM | 29 |
| A. The transport equation at low E/p_0 | 30 |
| B. The transport equation at high E/p_0 | 34 |
| C. Solution of the transport equation at low E/p_0 | 35 |
| 1-8. EXPERIMENTAL STUDIES OF NITROGEN IONS IN NITROGEN | 37 |
| A. Drift velocities | 38 |
| B. Longitudinal diffusion coefficients | 40 |
| C. Transverse diffusion coefficients | 40 |
| D. Reaction rate coefficients | 42 |
| References | 45 |

CHAPTER 2. PHOTOIONIZATION AND IONIZATION OF THE ALKALI METALS

M. R. C. McDOWELL

| | |
|--|-----------|
| 2-1. INTRODUCTION | 49 |
| 2-2. PHOTOIONIZATION | 50 |
| A. Experimental studies of photoionization | 50 |
| B. Theoretical studies of photoionization: independent particle models | 55 |
| C. Correlation effects in photoionization | 63 |
| 2-3. ELECTRON IMPACT IONIZATION | 72 |
| A. Experimental studies | 72 |
| B. Electron impact ionization: theory | 78 |
| 2-4. CONCLUSIONS | 94 |
| Acknowledgement | 95 |
| References | 96 |

CHAPTER 3. THE IMPULSE APPROXIMATION AND RELATED METHODS IN THE THEORY OF ATOMIC COLLISIONS

J. P. COLEMAN

| | |
|---|------------|
| 3-1. INTRODUCTION | 101 |
| A. Notation | 101 |
| B. Some results from the formal theory of scattering | 104 |
| 3-2. THE IMPULSE APPROXIMATION | 107 |
| A. A simple model | 107 |
| B. Formal derivation | 112 |
| C. Electron capture | 115 |
| 1. Atomic hydrogen target | 115 |
| 2. Helium target | 128 |
| 3. The high-energy limit | 129 |
| D. Excitation | 131 |
| E. Ionization | 136 |
| F. Summary | 137 |
| 3-3. THE VAINSHTEIN, PRESNYAKOV AND SOBELMAN APPROXIMATION | 138 |
| A. The post form of the VPS approximation | 139 |
| 1. Derivation of the approximation | 139 |
| 2. The peaking approximation | 143 |
| 3. The inclusion of exchange | 147 |
| 4. The effective charge | 148 |
| B. The prior form of the VPS approximation | 149 |
| C. Summary | 152 |
| 3-4. THE EXTENDED IMPULSE APPROXIMATION | 154 |
| A. The post form | 154 |
| B. The prior form | 159 |
| C. Summary | 159 |

| | |
|--|------------|
| APPENDIX 1. COULOMB FUNCTIONS | 160 |
| APPENDIX 2. NORDSIECK'S INTEGRATION TECHNIQUE | 161 |
| References | 165 |

CHAPTER 4. POSITRON COLLISIONS

B. H. BRANSDEN

| | |
|---|------------|
| 4-1. INTRODUCTION | 171 |
| A. Positron scattering and annihilation. | 172 |
| 1. Free annihilation | 172 |
| 2. Selection rules | 176 |
| 3. Positronium | 177 |
| B. The interaction of positrons with a monatomic gas | 180 |
| 1. Quenching of positronium. | 181 |
| 2. Collision theory and experiment | 182 |
| 4-2. THE ELASTIC SCATTERING OF POSITRONS BY ATOMS | 184 |
| A. General formulation | 184 |
| 1. The Green's function | 188 |
| 2. Angular momentum decomposition | 189 |
| B. Approximation schemes | 192 |
| 1. The static approximation | 192 |
| 2. The adiabatic polarisation potential | 196 |
| 3. Virtual positronium formation | 200 |
| 4. Variational methods | 202 |
| C. Applications of the variational method. | 216 |
| 1. Positron-hydrogen scattering | 216 |
| 2. Positron-helium scattering | 222 |
| D. Developments of the polarised orbital method. | 225 |
| 1. Positron scattering by hydrogen | 226 |
| 2. Positron scattering by the rare gases | 231 |
| 4-3. THE FORMATION AND SCATTERING OF POSITRONIUM | 235 |
| A. The formation of positronium by positron impact on hydrogen and helium | 236 |
| 1. General formalism | 237 |
| 2. Trial functions and applications | 239 |
| B. The scattering of positronium by hydrogen and helium | 243 |
| Acknowledgement | 245 |
| References | 245 |

CHAPTER 5. EXPERIMENTS WITH COLLIDING CHARGED-PARTICLE BEAMS

K. T. DOLDER

| | |
|------------------------------------|------------|
| 5-1. INTRODUCTION | 251 |
|------------------------------------|------------|

| | |
|---|-----|
| 5-2. GENERAL PRINCIPLES OF EXPERIMENTS WITH COLLIDING CHARGED-PARTICLE BEAMS | 251 |
| A. Typical experimental arrangements | 251 |
| B. The calculation of cross sections from experimental data | 252 |
| C. Form factors | 254 |
| D. Some effects of space charge in electron and ion beams | 257 |
| E. The separation of signals from backgrounds | 260 |
| F. The separation of beams of ions and atoms | 266 |
| G. Initial states of excitation of parent ions | 269 |
| 5-3. THE IONIZATION OF POSITIVE IONS BY ELECTRON IMPACT | 272 |
| A. Experiments which have been performed with crossed beams | 272 |
| B. Four experimental approaches | 272 |
| C. Results of the experiments | 283 |
| 5-4. THE EXCITATION OF POSITIVE IONS BY ELECTRON IMPACT | 292 |
| A. Introduction | 292 |
| B. The measurements of the excitation function He^+ (1S-2S) by Dance et al. | 292 |
| 1. The method | 292 |
| 2. The detector for 304 Å photons | 293 |
| 3. Backgrounds | 294 |
| 4. Results | 296 |
| 5. Discussion | 298 |
| C. Methods which rely upon the direct observation of light emitted by colliding electron and ion beams | 300 |
| D. The experiment of Bacon and Hooper | 301 |
| 1. Backgrounds | 301 |
| 2. Other experimental consideration | 302 |
| E. The experiment of Lee and Carleton | 304 |
| 5-5. THE DETACHMENT OF ELECTRONS FROM NEGATIVE IONS BY ELECTRON IMPACT | 306 |
| A. Introduction | 306 |
| B. The experiment of Dance, Harrison and Rundel | 306 |
| C. The experiment of Tisone and Branscomb | 308 |
| D. Results and discussion | 309 |
| 5-6. MEASUREMENTS OF CROSS SECTIONS FOR THE PRODUCTION OF PROTONS BY COLLISIONS BETWEEN ELECTRONS AND H_2^+ IONS | 311 |
| A. Introduction | 311 |
| B. The experiments of Dunn, Van Zyl and Zare [5, 78, 79] | 312 |
| C. The experiment of Dance et al. [14] | 314 |
| D. Results and discussion | 315 |
| 5-7. EXPERIMENTS WITH COLLIDING ION BEAMS | 317 |
| 5-8. ALTERNATIVE METHODS USED TO STUDY COLLISIONS BETWEEN ELECTRONS AND IONS | 323 |
| A. Sequential mass spectrometry | 323 |
| B. Collisions between electron beams and low-density plasmas | 324 |
| C. Collisions between electrons and highly-charged ions | 325 |
| 5-9. SOME EXPERIMENTAL TECHNIQUES | 325 |
| A. Ion sources | 325 |
| B. Electron beam sources | 326 |
| C. Electron and ion optics | 327 |

| | |
|--|-----|
| D. Vacuum techniques | 327 |
| E. Particle detectors | 327 |
| F. Intensity calibration of UV detectors | 330 |
| G. Miscellaneous techniques | 330 |
| Acknowledgements | 330 |
| References | 330 |

CHAPTER 6. BINARY-ENCOUNTER AND CLASSICAL COLLISION THEORIES

L. VRIENS

| | |
|---|------------|
| 6-1. INTRODUCTION | 337 |
| 6-2. HISTORICAL SURVEY | 338 |
| A. Early work | 338 |
| 1. Scattering by nuclei of atoms | 338 |
| 2. Scattering by atomic electrons | 339 |
| B. Recent developments | 344 |
| 6-3. TWO PARTICLE COLLISIONS | 346 |
| A. Basic relations | 346 |
| B. Some special applications | 349 |
| 6-4. CHARGED PARTICLE-ATOM COLLISIONS | 353 |
| A. Collision models | 353 |
| B. Single ionization | 354 |
| C. Excitation | 357 |
| D. Double ionization | 358 |
| E. Charge transfer | 359 |
| F. Electronic stopping | 361 |
| G. Velocity distribution of atomic electrons | 362 |
| 6-5. COMPARISON WITH THE BORN APPROXIMATION | 363 |
| A. Double differential cross sections | 363 |
| B. The cross section per unit energy transfer | 366 |
| C. The total ionization cross section | 368 |
| D. Stopping power | 369 |
| E. Sum rules and total cross section | 370 |
| F. Alternative method of deriving binary-encounter formulae | 372 |
| 6-6. THE CLASSICAL THEORY | 376 |
| A. Differential cross sections | 380 |
| B. Total cross sections | 381 |
| 6-7. COMPARISON WITH EXPERIMENT | 382 |
| A. Differential cross sections | 382 |
| B. Total cross sections | 384 |
| C. Similarity of scaled cross sections | 385 |
| 6-8. RESONANCES | 390 |
| 6-9. SUMMARY AND CONCLUSIONS | 393 |

| | |
|--|------------|
| References | 395 |
| CHAPTER 7. COINCIDENCE MEASUREMENTS | |
| Q. C. KESSEL | |
| 7-1. INTRODUCTION | 401 |
| 7-2. THE THEORY OF MEASUREMENT | 404 |
| A. The inelastic energy loss | 404 |
| B. Charge state analysis | 405 |
| 7-3. THE EXPERIMENT | 407 |
| A. Apparatus | 407 |
| B. Procedure | 410 |
| 7-4. COINCIDENCE SCATTERING DATA | 412 |
| A. Argon—argon | 413 |
| 1. Inelastic energy loss | 413 |
| 2. Ionization states | 419 |
| 3. Correlation between scattered and recoil charge states | 423 |
| 4. Correlation of the triple-peak region | 426 |
| B. Neon—neon | 430 |
| 1. Inelastic energy loss | 430 |
| 2. Ionization states | 431 |
| 3. Correlation between scattered and recoil charge states | 434 |
| C. Krypton—krypton | 436 |
| D. Neon—argon | 438 |
| E. Oxygen—argon | 440 |
| F. Related, non-coincident data | 440 |
| 1. Anomalies in the total differential cross section | 440 |
| 2. Energies of ionized electrons | 441 |
| G. Summary | 445 |
| 7-5. MODELS CONCERNING IONIZATION IN HEAVY ION COLLISIONS | 445 |
| A. Collective oscillations | 446 |
| B. Energy level crossings of molecular wave functions | 447 |
| 1. The Ar ⁺ —Ar collision | 450 |
| 2. The Ne ⁺ —Ne collision | 451 |
| C. Statistical models for ionization | 451 |
| 7-6. ADDITIONAL COINCIDENCE MEASUREMENTS | 452 |
| A. Total scattering cross sections | 453 |
| B. Electron-ion coincidence experiments | 456 |
| 7-7. APPENDIX | 456 |
| A. Calculation of T_1 , T_2 and Q | 456 |
| B. Some experimental details | 458 |
| 1. Charge analysis of coincident ions | 458 |
| 2. Coincidence resolving time | 459 |
| Acknowledgement | 460 |

| | |
|--|-----|
| References | 460 |
| CHAPTER 8. RECOMBINATION OF RARE GAS IONS WITH ELECTRONS | |
| H. J. OSKAM | |
| 8-1. INTRODUCTION | 465 |
| 8-2. MECHANISMS OF ELECTRON-ION RECOMBINATION | 468 |
| A. Dissociative recombination | 468 |
| 1. Dependence of the recombination coefficient on electron temperature | 469 |
| 2. The direct dissociative recombination process | 471 |
| 3. The indirect dissociative recombination process | 472 |
| B. Collisional-radiative recombination | 473 |
| 8-3. EXPERIMENTAL METHODS | 476 |
| A. Microwave cavity method | 476 |
| 1. Theory of the method | 476 |
| 2. Experimental technique | 484 |
| B. Light spectrometer techniques | 487 |
| 1. Light emission | 488 |
| 2. Spectral line shape | 489 |
| C. Mass spectrometer techniques | 494 |
| 8-4. RECOMBINATION PROCESSES INVOLVING HELIUM IONS | 503 |
| 8-5. RECOMBINATION PROCESSES INVOLVING RARE GAS IONS OTHER THAN HELIUM IONS | 512 |
| A. Neons ions | 512 |
| 1. Electron density studies | 512 |
| 2. Light emission studies | 514 |
| 3. Spectral line-shape studies | 516 |
| 4. Dependence of $\alpha(\text{Ne}_3^+)$ on the electron temperature | 517 |
| B. Argon ions | 518 |
| C. Krypton and xenon ions | 520 |
| Acknowledgement | 521 |
| References | 521 |

**CHAPTER 9. HIGH RESOLUTION ELECTRON BEAMS AND
THEIR APPLICATION**

L. KERWIN, P. MARMET, J. D. CARETTE

| | |
|-----------------------------|-----|
| 9-1. INTRODUCTION | 527 |
|-----------------------------|-----|

| | |
|--|-----|
| 9-2. SOME HISTORY | 528 |
| 9-3. INSTRUMENTS | 529 |
| A. The RPD method | 529 |
| B. The 127° electrostatic selector | 530 |
| C. The spherical electrostatic selector | 536 |
| D. The parallel-plane electrostatic selector | 537 |
| E. The axial-source cylindrical electrostatic selector | 538 |
| F. The monokinetron | 539 |
| G. Magnetic selectors | 540 |
| H. Time-of-flight selectors | 541 |
| I. Miscellany | 542 |
| 9-4. ELECTRON SPECTROSCOPY | 544 |
| A. The electron spectroscope | 544 |
| B. Elastic scattering, resonances | 546 |
| C. Inelastic scattering | 555 |
| 1. Second mode | 555 |
| 2. Third mode | 561 |
| 3. Rotational levels | 562 |
| 9-5. IONIZATION | 562 |
| A. Atoms | 563 |
| 1. Hydrogen | 563 |
| 2. Helium | 566 |
| 3. Ne, Ar, Kr, Xe | 568 |
| 4. Double ionization of inert gases | 571 |
| 5. Higher degree of ionization of inert gases | 572 |
| B. Diatomic molecules | 573 |
| 1. Hydrogen | 573 |
| 2. Nitrogen | 574 |
| 3. Oxygen | 575 |
| C. Triatomic molecules | 575 |
| D. The negative ion SF ₆ ⁻ | 576 |
