

CONTENTS

CHAPTER 1. DETAILED BALANCING IN THE TIME-DEPENDENT IMPACT PARAMETER METHOD

E. GERJUOY

1. INTRODUCTION	1
2. TIME-REVERSAL IN THE IMPACT PARAMETER METHOD	4
2.1. Time-reversal with a time-independent Hamiltonian	4
2.2. Time-reversal with prescribed relative motion	9
2.3. Detailed balance in the impact parameter method	13
2.4. Symmetry under reflection	15
2.5. Moving eigenfunctions	20
3. THE COUPLED STATE APPROXIMATION	27
3.1. Expansion in time-independent functions	28
3.2. Microreversibility relations involving identical intervals	34
3.3. Microreversibility proof for moving expansion functions	39
Acknowledgment	45
References	45

CHAPTER 2. MECHANISMS OF ELECTRON PRODUCTION IN ION-ATOM COLLISIONS

M.E. RUDD and J.H. MACEK

1. INTRODUCTION	49
2. MEASUREMENT OF DOUBLY DIFFERENTIAL CROSS SECTIONS AND ELECTRON SPECTRA	51
3. DIRECT COULOMB IONIZATION	79
4. AUTOIONIZATION AND THE AUGER EFFECT	93
5. ELECTRON PROMOTION	114
6. CHARGE TRANSFER TO CONTINUUM STATES	125
References	133

CHAPTER 3. THE PRODUCTION OF INNER-SHELL VACANCIES IN HEAVY ION-ATOM COLLISIONS

Quentin C. KESSEL and Bent FASTRUP

1. INTRODUCTION	139
2. THE MOLECULAR ORBITAL MODEL	143
2.1. The Born-Oppenheimer approximation	145
2.2. Molecular orbital correlation diagrams for diabatic states	152
2.3. Excitation mechanisms	162
3. AN EVALUATION OF THE EXPERIMENTS AND THE DATA	166
3.1. Differential measurements of single atomic collisions	167
3.2. Spectroscopic measurements and total emission cross sections	181
3.3. The relationship between total cross sections and differential measurements	203
4. APPLICATIONS FOR INNER-SHELL EXCITATIONS	205
Acknowledgments	209
References	209

CHAPTER 4. HYPERFINE AND ZEEMAN STUDIES OF METASTABLE ATOMIC STATES BY ATOMIC-BEAM MAGNETIC-RESONANCE

W.J. CHILDS

1. INTRODUCTION	217
2. EXPERIMENTAL CONSIDERATIONS	219
2.1. General principles	219
2.2. Apparatus	232
2.3. Experimental procedure	242
3. THEORETICAL CONSIDERATIONS AND INTERPRETATION OF EXPERIMENTAL RESULTS	253
3.1. Choice of calculational basis; derivation of eigenvectors	253
3.2. g values for atomic states	259
3.3. Hamiltonian for the hyperfine interaction	261
3.4. Evaluation of matrix elements; theoretical expressions for hyperfine-interaction constants	268
3.5. Off-diagonal hyperfine structure and the Zeeman effect	271
3.6. Comparison of theoretical and experimental hyperfine-interaction constants	280
4. CONCLUDING REMARKS	298
4.1. General comments	298
4.2. Outlook for the future	299
References	300

CHAPTER 5. COUPLED INTEGRAL-EQUATION APPROACH TO NONRELATIVISTIC THREE-BODY SYSTEMS WITH APPLICATIONS TO ATOMIC PROBLEMS

Joseph C. Y. CHEN

1. INTRODUCTION	308
2. KINEMATIC THEORY OF THREE-BODY SYSTEM	309
2.1. Coordinates and momentum variables	309
2.2. Three-body kinematic description	312
2.3. Lippmann-Schwinger equation	313
2.4. Description of multichannel collision	315
2.5. Problems with multichannel Lippmann-Schwinger equations	318
3. COUPLED INTEGRAL-EQUATION FORMULATION	319
3.1. Green's-function approach	319
3.2. Faddeev equations	321
3.3. Watson equations	323
3.4. Lovelace equations	326
3.5. Newton equations	327
3.6. Iterated equations	328
3.7. Further variations on coupled equations	329
4. REDUCTION OF THE COUPLED EQUATIONS	332
4.1. On-shell reduction	332
4.2. Partial wave decomposition	337
4.3. Eigenfunction expansion	341
4.4. Multiple-scattering expansions	344
5. THREE-BODY COULOMB SYSTEMS	350
5.1. Long-range Coulomb interaction	350
5.2. Off-shell two-body Coulomb amplitude	351
5.3. Mixed-mode reduction	358
5.4. Screening approximation	361
5.5. Final-channel interaction	365
6. METHODS OF APPROXIMATION	368
6.1. Matrix-inversion method	368
6.2. Fredholm reduction method	371
6.3. Double-expansion method	372
6.4. Eikonal approximation	373
7. APPLICATION TO ATOMIC PROBLEMS	378
7.1. Three-body bound states	378
7.2. Three-body resonances	384
7.3. Collision amplitudes	388
7.4. Differential and total cross sections	396
Acknowledgments	413
References	413
Author Index	419
Subject Index	427
