

## CONTENTS

### CHAPTER 1. CORRESPONDENCE IDENTITIES AND THE COULOMB POTENTIAL

A. NORCLIFFE

1. INTRODUCTION	4
2. THE HISTORICAL IMPORTANCE OF THE CORRESPONDENCE IDENTITIES	6
2.1. Consequences of the Rutherford scattering identity	6
2.2. Consequences of the Bohr–Sommerfeld identity	7
3. PRESENT-DAY RELEVANCE IN CLASSICAL THEORIES	9
3.1. Reasons for using classical theories	10
3.2. Classical binary encounter collisions	11
3.3. Classical three-body calculations	12
4. EXPLAINING THE CORRESPONDENCE IDENTITIES	14
4.1. Explaining correspondence identities	14
4.2. Providing a complete correspondence identity for the bound states of the Coulomb potential	19
4.3. Explaining the Fock and Bohr–Sommerfeld identities	26
4.4. Providing a complete correspondence identity for the scattering states	27
4.5. Explaining the Rutherford scattering identity	35
5. RELEVANCE IN SEMI-CLASSICAL THEORIES – UNDERSTANDING QUANTAL EFFECTS IN TERMS OF CLASSICAL PATHS	38
5.1. Interference	39
5.2. Discrete energy levels and quantization	40
5.3. Barrier penetration and classically forbidden processes	41
5.4. Spin	42
6. FURTHER CONSIDERATIONS AND CORRESPONDENCE IDENTITIES IN GENERAL	43
6.1. Why does a complete correspondence identity exist?	44
6.2. The relevance of dynamical symmetry in the existence of complete correspondence identities	49
7. CONCLUSIONS	52
Acknowledgment	53
References	53

## CHAPTER 2. RECOMBINATION

D.R. BATES

1. INTRODUCTION	59
2. IONIC RECOMBINATION IN A GAS	59
3. MUTUAL NEUTRALIZATION	64
4. RADIATIVE RECOMBINATION	67
5. COLLISIONAL-RADIATIVE RECOMBINATION	69
6. DEVELOPMENT OF THEORY OF IONIC RECOMBINATION IN A GAS	72
7. ELECTRONIC RECOMBINATION IN A GAS	74
8. RECOMBINATION ELECTRICAL NETWORK THEOREM	77
9. DIELECTRONIC RECOMBINATION	77
10. COLLISIONAL-DIELECTRONIC RECOMBINATION	81
11. DISSOCIATIVE RECOMBINATION	82
12. FINAL REMARKS	88
Acknowledgments	89
References	89

CHAPTER 3. RELATIVISTIC SELF-CONSISTENT-FIELD  
 CALCULATIONS WITH APPLICATION TO ATOMIC HYPERFINE  
 INTERACTION. Part I: Relativistic self-consistent fields.  
 Part II: Relativistic theory of atomic hyperfine interaction

I. LINDGREN and A. ROSÉN

I.1. INTRODUCTION	97
I.2. RELATIVISTIC HARTREE-FOCK EQUATIONS	98
I.2.1. Relativistic hamiltonian and zero-order wavefunctions	98
I.2.2. One- and two-electron integrals	100
I.2.3. Relativistic Hartree-Fock equation	101
I.2.4. Numerical examples	108
I.3. AVERAGE OF CONFIGURATION	112
I.3.1. One-electron energies	112
I.3.2. Total energies	115
I.3.3. Summary of angular factors for average of configuration	117
I.3.4. Example: $1s^2 2s^2 2p^N$ configuration	119
I.4. STATISTICAL EXCHANGE APPROXIMATION	122
I.4.1. Slater exchange	122
I.4.2. Electron-gas model	129
I.4.3. Thomas-Fermi model	131
I.4.4. Kohn-Sham model	131
I.4.5. Parametrized potentials	132
I.4.6. Hartree-Slater model	135
APPENDIX A. HARTREE ATOMIC UNITS	136
APPENDIX B. HARTREE-SLATER APPROXIMATION	137

APPENDIX C. SOME GENERAL THEOREMS CONCERNING STATISTICAL EXCHANGE APPROXIMATIONS	142
References	146
II.1. INTRODUCTION	150
II.2. MULTIPOLE EXPANSION OF THE STATIC ELECTRO-MAGNETIC FIELD FROM THE NUCLEUS	151
II.2.1. Equations for electro-magnetic potentials	151
II.2.2. Electric interaction	152
II.2.3. Magnetic interaction	153
II.3. HYPERFINE HAMILTONIAN	157
II.3.1. Non-relativistic perturbation	157
II.3.2. Relativistic perturbation	161
II.4. SINGLE-ELECTRON SYSTEMS	163
II.4.1. Non-relativistic matrix elements	163
II.4.2. Relativistic matrix elements	168
II.5. THE EFFECTIVE RELATIVISTIC HYPERFINE HAMILTONIAN	169
II.5.1. The theory of Sandars and Beck	169
II.5.2. The relation between the relativistic and the non-relativistic hamiltonians	171
II.5.3. Explicit expressions for the effective hyperfine hamiltonians of order $k = 1, 2, 3, 4$	174
II.6. HYPERFINE INTERACTION FOR MANY-ELECTRON ATOMS	176
II.6.1. Breakdown of $LS$ coupling	177
II.6.2. Explicit expressions for the hyperfine interaction constants in intermediate coupling	177
APPENDIX A. VECTOR SPHERICAL HARMONICS	184
APPENDIX B. TENSOR-OPERATOR FORMULAS	188
APPENDIX C. MATRIX ELEMENTS OF $C^k$ AND SOME $9-j$ SYMBOLS	192
References	195

## CHAPTER 4. RELATIVISTIC SELF-CONSISTENT-FIELD CALCULATIONS WITH APPLICATION TO ATOMIC HYPERFINE INTERACTION. Part III: Comparison between theoretical and experimental hyperfine-structure results

I. LINDGREN and A. ROSÉN

III.1. REVIEW OF EXPERIMENTAL TECHNIQUES	199
III.2. THE TRADITIONAL HYPERFINE HAMILTONIAN	201
III.3. THEORETICAL HYPERFINE PARAMETERS AND RELATIVISTIC CORRECTION FACTORS	202
III.4. THE PROCEDURE FOR DETERMINING EFFECTIVE RADIAL PARAMETERS FROM EXPERIMENTS	205
III.5. HYPERFINE STRUCTURE OF THE ALKALI ATOMS	212
III.6. HYPERFINE STRUCTURE OF COPPER, SILVER AND GOLD	223

III.7. HYPERFINE STRUCTURE OF THE $np^N$ GROUND-CONFIGURATION ATOMS	225
III.7.1. General	225
III.7.2. Magnetic dipole interaction	226
III.7.3. Electric quadrupole interaction	245
III.7.4. Magnetic octupole interaction	249
III.8. HYPERFINE STRUCTURE OF THE 3d-SHELL ATOMS	250
III.9. HYPERFINE STRUCTURE OF THE 4d- AND 5d-SHELL ATOMS	262
III.10. HYPERFINE STRUCTURE OF THE RARE-EARTH ATOMS	270
III.11. HYPERFINE STRUCTURE OF THE ACTINIDES	286
III.12. SUMMARY AND CONCLUSION	286
APPENDIX A. COMPUTER PROGRAM FOR HYPERFINE-STRUCTURE ANALYSIS	288
APPENDIX B. CONVERSION FACTORS BETWEEN HYPERFINE INTERACTION CONSTANTS AND HYPERFINE RADIAL INTEGRALS	291
References	292

## CHAPTER 5. PSEUDOPOTENTIALS IN ATOMIC AND MOLECULAR PHYSICS

J.N. BARDSLEY

1. INTRODUCTION	302
2. FORMAL DEVELOPMENT OF PSEUDOPOTENTIALS	303
2.1. Systems with one valence electron	303
2.2. Generalized pseudopotential operators	307
2.3. Systems with two valence electrons	308
2.4. Localized molecular orbitals	309
2.5. Optical potentials	312
3. EMPIRICAL PSEUDOPOTENTIALS	313
3.1. Formal considerations	313
4. THE CHOICE OF PSEUDOPOTENTIAL	317
4.1. Truncated Coulomb potentials	318
4.2. Exponential potentials	319
4.3. Further empirical potentials	321
4.4. Statistical pseudopotentials	321
4.5. Further ab initio pseudopotentials	324
4.6. Summary	326
5. THE CALCULATION OF ATOMIC PROPERTIES	327
5.1. Energy levels	327
5.2. Photon absorption or emission	336
6. THE CALCULATION OF MOLECULAR PROPERTIES	343
6.1. Alkali molecules	343
6.2. The interaction between alkali and rare gas atoms	347
6.3. Rydberg states in molecules	349
6.4. Further studies of molecular bound states	350
6.5. Photoionization in molecules	352

7. ELECTRON SCATTERING BY ATOMS AND MOLECULES	353
7.1. Electron scattering by neutral alkali atoms	353
7.2. Low energy scattering of electrons by rare gas atoms	354
7.3. Correlation effects in e-H scattering	356
7.4. Electron scattering by molecules	357
8. CONCLUSIONS	358
APPENDIX 1. COMPUTATIONS WITH PSEUDOPOTENTIALS	359
Acknowledgments	364
References	364

## CHAPTER 6. ANALYSIS FOR ION DRIFT TUBE EXPERIMENTS

I.R. GATLAND

1. INTRODUCTION	371
2. DRIFT TUBES	372
3. KINETIC THEORY	375
4. GREEN'S FUNCTION METHOD	381
5. ONE AND TWO ION SOLUTION	388
6. SOURCES, DETECTORS AND DRIFT REGIONS	392
7. SPECTRUM ANALYSIS (ONE ION)	398
8. SPECTRUM ANALYSIS (TWO IONS)	404
9. RADIAL BOUNDARY EFFECTS	413
10. END PLATE BOUNDARY EFFECTS	420
11. FAST FORWARD-BACKWARD REACTIONS	424
12. GENERAL CONSIDERATIONS	426
13. CONCLUSIONS	431
Acknowledgments	431
Appendix	432
References	436
Author Index	439
Subject Index	449
