Preface	xiii	
1	Introduction	1
1.1	What is thermoluminescence?	1
1.2	Luminescence	2
1.3	Early observations of thermoluminescence (pre-1948)	8
1.4	Applications	11
	1.4.1. Radiation dosimetry	11
	1.4.2. Age determination	13
	1.4.3. Geology	14
	1.4.4. Defects in solids	16
	1.4.5. Other applications	17
1.5	This book	18
2	Theoretical background	20
2.1	Elementary concepts	20
	2.1.1. Energy bands and localized levels: crystalline materials	20
	2.1.2. Non-crystalline materials	24
	2.1.3. Traps and recombination centres	25
	2.1.4. Transitions not involving the delocalized bands	30
2.2	Recombination processes	32
	2.2.1. Direct and indirect recombination	33
	2.2.2. Radiative and non-radiative recombination	34
2.3	Models for thermoluminescence	40
	2.3.1. Simple model	41
	2.3.2. Additions to the simple model	49
	2.3.3. An alternative model	57
	2.3.4. More complex models	61
3	Thermoluminescence analysis	64
3.1	Introduction	64
3.2	Trap emptying	66
	3.2.1. Equations for the simple model: order of kinetics	66
	3.2.2. Equations for other models	74
3.3	Methods of analysis	75

3.3.1.	Partial and whole curve analyses	76
3.3.2.	Peak shape methods	87
3.3.3.	Peak position methods	90
3.3.4.	Curve-fitting	95
3.3.5.	Isothermal analysis	98
3.3.6.	Energy distributions	105
3.3.7.	Calculation of the frequency factor, s	110
3.3.8.	Summary	115
3.4	Trap filling	115
3.4.1.	The simple model	118
3.4.2.	Additions to the simple model	122
4	Additional factors governing thermoluminescence	127
4.1	Further discussions of supralinearity	127
4.1.1.	Multi-stage reaction models	127
4.1.2.	More on competition models	130
4.1.3.	Trap creation models	131
4.2	Sensitization	132
4.2.1.	Competing trap models	133
4.2.2.	Centre conversion models	133
4.2.3.	Trap creation models (radiation and thermal)	134
4.3	Optical effects	137
4.3.1.	Optical stimulation	137
4.3.2.	Phototransfer	141
4.4	Tunnelling and anomalous fading	143
4.5	Quenching effects	148
4.5.1.	Thermal quenching	148
4.5.2.	Concentration quenching	150
4.5.3.	Impurity quenching	152
5	Defects and thermoluminescence	153
5.1	General introduction	153
5.2	The alkali halides	154
5.2.1.	Structure and defects	154
5.2.2.	Irradiation effects	159
5.2.3.	Thermoluminescence from KCl, KBr, KI and NaCl, irradiated at 4 K	163
5.2.4.	Samples irradiated at 80 K	166
5.2.5.	Samples irradiated at room temperature	173

5.3	5.2.6. Thermoluminescence from LiF Quartz and silica 5.3.1. Structure 5.3.2. Defects 5.3.3. Luminescence 5.3.4. Thermoluminescence; samples irradiated below room temperature 5.3.5. Samples irradiated at room temperature	177 187 188 190 195 197 198
6	Thermoluminescence dosimetry (TLD)	205
6.1	General requirements for TLD materials 6.1.1. Dose response 6.1.2. Energy response 6.1.3. Fading and stability 6.1.4. Annealing procedures 6.1.5. Other factors	205 206 207 214 215 216
6.2	Specific examples 6.2.1. Lithium fluoride, LiF 6.2.2. Lithium borate, $\text{Li}_2\text{B}_4\text{O}_7$ 6.2.3. Magnesium borate, MgB_4O_7 6.2.4. Magnesium orthosilicate, Mg_2SiO_4 6.2.5. Calcium sulphate, CaSO_4 6.2.6. Calcium fluoride, CaF_2 6.2.7. Beryllium oxide, BeO 6.2.8. Aluminium oxide, Al_2O_3	217 222 225 228 229 230 231 233 234
6.3	Ultra-violet effects and dose re-estimation	235
6.4	Personal dosimetry 6.4.1. Introduction 6.4.2. Materials 6.4.3. Practical application	236 236 237 239
6.5	Environmental monitoring 6.5.1. Introduction 6.5.2. Materials 6.5.3. Practical application	241 241 243 243
6.6	Medical applications 6.6.1. Introduction 6.6.2. Materials 6.6.3. Practical application 6.6.4. Specific examples	246 246 247 247 249

7	Thermoluminescence dating	253
7.1	General	253
7.2	Techniques in pottery dating	254
	7.2.1. Introduction	254
	7.2.2. Fine-grain dating	256
	7.2.3. Inclusion dating	257
	7.2.4. Pre-dose dating	258
	7.2.5. Phototransfer dating	266
7.3	General problems	268
	7.3.1. Fading	268
	7.3.2. Spurious thermoluminescence	271
	7.3.3. Sensitization and supralinearity	272
7.4	Dose rate evaluation	274
	7.4.1. Introduction	274
	7.4.2. Thermoluminescence dosimetry	277
	7.4.3. Alpha-counting and K-analysis	279
	7.4.4. Other techniques	281
7.5	Special dating applications	282
	7.5.1. Sediments	282
	7.5.2. Stones and rocks	286
	7.5.3. Shells, bones and teeth	289
	7.5.4. Authenticity testing	290
8	Geological applications	293
8.1	General	293
8.2	Meteorites	294
	8.2.1. Mineralogy	294
	8.2.2. Thermoluminescence	295
	8.2.3. The use of the natural glow-curve	303
	8.2.4. The use of the artificial glow-curve	307
8.3	Lunar material	309
	8.3.1. Mineralogy and ages	309
	8.3.2. Luminescence	310
	8.3.3. Thermoluminescence	312
8.4	Terrestrial geology	315
	8.4.1. Shock detection	315
	8.4.2. Geo- and palaeothermometry	318
	8.4.3. Prospecting	320
	8.4.4. Miscellaneous applications	321
8.5	Concluding remarks	322

9	Instrumentation	323
9.1	Introduction	323
9.2	Cryostat design	324
	9.2.1. High temperature (>room temperature)	324
	9.2.2. Low temperature (< room temperature)	325
9.3	Heater design and temperature control	326
	9.3.1. Heater design	326
	9.3.2. Temperature control	328
9.4	Light detection	332
	9.4.1. Photomultiplier tube: d.c. current mode	332
	9.4.2. Photon counting	334
9.5	Special considerations	336
	9.5.1. Background subtraction	336
	9.5.2. Emission spectra	337
9.6	Commercial systems	340
	Appendix A: Minerals	342
	Appendix B: Commercial thermoluminescence systems	344
	References	345
	Index	371
