

Contents

1. Synchrotron Radiation: A Unique Tool for Many Disciplines	3
2. Synchrotron Radiation Sources and Instrumentation	9
2.1. Elements of Storage Ring Operation	11
2.1.1. Storage Ring Parameters	14
2.1.2. Storage Ring Physics: Beam Emittance and Lifetime	17
2.2. Synchrotron Radiation from the Bending Magnets	26
2.2.1. Source Parameters	27
2.2.2. Physical Properties of the Bending Magnet Radiation	29
2.3. Synchrotron Radiation from Insertion Devices	40
2.3.1. Multiple Wigglers and Undulators	42
2.3.2. Free Electron Laser, Inverse Compton Scattering	49
2.4. Optical Components	50
2.4.1. Optical Instrumentation for Ultraviolet and X-Ray Photons	50
2.4.2. Mirrors	56
2.4.3. Grating Monochromators for Vacuum Ultraviolet Light and Soft X-Rays	59
2.4.4. Crystal Monochromators for Hard X-Rays	72
2.4.5. Beamline Design	77
2.5. Particle Analyzers and Detectors	81
2.5.1. Analyzers	81
2.5.2. Detectors	85
2.6. Vacuum Instrumentation	88
2.7. Some Practical Considerations	91
3. Optical Spectroscopy and EXAFS	94
3.1. Optical Absorption Processes for Ultraviolet and X-Ray Photons in Atoms, Molecules, and Solids	94

3.2. Detailed Features in the Optical Absorption Spectra	102
3.2.1. Atoms and Molecules	102
3.2.2. Solids	106
3.3. Extended X-Ray Absorption Fine Structure	118
3.3.1. Elements of EXAFS Theory	123
3.3.2. Detection Techniques	126
3.3.3. EXAFS Data Analysis	131
3.3.4. Surface EXAFS	134
4. Photoemission Spectroscopy	139
4.1. General Description of Photoemission Spectroscopy	140
4.2. Gas-Phase Photoemission of Atoms and Molecules	144
4.2.1. Cross Sections and Angular Distributions	144
4.2.2. Binding Energies	150
4.2.3. Practical Considerations	152
4.3. Solid-State Photoemission	156
4.3.1. Escape Depth and Secondary Electrons	157
4.3.2. Interpretation of Energy Distribution Curves in Solids—Theory	159
4.3.3. Photoemission Techniques Based on the Energy Distribution Curves	162
4.3.4. Photon Polarization Techniques	177
4.3.5. Constant-Initial-State and Constant-Final-State Spectroscopy	178
4.3.6. Spin-Polarized Photoemission	180
5. Elastic X-Ray Scattering	182
5.1. Small-Angle Scattering Studies of Disordered Systems	183
5.2. X-Ray Diffraction Studies of Ordered Systems	186
5.2.1. Elements of X-Ray Diffraction Theory	187
5.2.2. X-Ray Diffraction Techniques	193
5.2.3. Topography	203
5.2.4. Magnetic Diffraction	205
5.3. Systems with Partial Order	205
6. Synchrotron Radiation in Technology and Medicine	208
6.1 X-Ray Lithography	208
6.1.1. Synchrotron Radiation Lithography—General Principles	211
6.1.2. Synchrotron Radiation Lithography—Technical Details	213
6.2. Synchrotron Radiation Angiography	216
7. Desorption, Microscopy, Fluorescence, and Other Synchrotron Radiation Techniques	219
7.1. Photon-Stimulated Desorption and Radiation Damage	219
7.1.1. Examples of Photon-Stimulated Desorption Mechanisms for Ions	221

7.1.2. Angle-Resolved Photon-Stimulated Desorption and Photon-Stimulated Desorption of Neutral Species	225
7.1.3. Radiation Damage	227
7.2. X-Ray Microscopy	228
7.2.1. X-Ray Holography	230
7.3. Fluorescence Experiments	231
7.3.1. Time-Resolved Fluorescence	233
7.4. X-Ray Standing Wave Analysis	235
7.5. Inelastic X-Ray Scattering	236
8. Future Research Opportunities	238
8.1. New Synchrotron Radiation Sources	238
8.2. Problems and Challenges	241
Appendix I. Physical Constants and Conversion Factors	243
Appendix II. Frequently Used Synchrotron Radiation Equations and Definitions	244
Appendix III. Tabulation of the $G_1(\nu)$ Function (Spectral Dependence of the Bending Magnet Radiation)	246
Appendix IV. Kramers–Kronig Relations	247
Appendix V. Fourier Transforms	249
Appendix VI. Core-Level Binding Energies	253
Appendix VII. Forbidden Gaps	267
Bibliography	269
Index	273
