<i>List of Contributors</i>	ix
<i>Treatise Preface</i>	xi
<i>Preface</i>	xiii

1 Introduction

C. F. Barnett

I. Evolution of Atomic Physics in Fusion Research	1
II. Approaches to Fusion	5
III. Atomic Physics in Fusion	21
References	23

2 Basic Concepts of Fusion Research

M. F. A. Harrison

I. Introduction	27
II. The Principles of a D-T Fusion Reactor	28
III. Magnetic Confinement of Fusion Plasmas	32
IV. Energy Balance Conditions in a Magnetically Confined Fusion Plasma	36
V. Auxiliary Heating	42
VI. Inertial Confinement	46
References	49

3 Atomic Radiation from Low Density Plasma

R. W. P. McWhirter and H. P. Summers

I. Preliminary Discussion	52
II. The Boltzmann Equation	55
III. Components of the Statistical Balance Equations	60
IV. The Collective Viewpoint of Ionization and Recombination	71
V. The Distribution among the Stages of Ionization	81
VI. Spectral Line Intensities	85
VII. Radiated Power Loss	97
References	108

4 Properties of Magnetically Confined Plasmas in Tokamaks

John T. Hogan

I. Introduction	114
II. Magnetic Configuration	116
III. Moment Equations	122

IV. Particle Balance	126
V. Energy Balance	130
VI. Impurity Transport	136
References	138

5 Diagnostics

5A Diagnostics Based on Emission Spectra

N. J. Peacock

I. Introduction	143
II. Ionization Equilibrium	144
III. Atomic Level Populations	162
IV. Spectral Features and Their Diagnostic Application to Fusion Plasmas	169
V. Neutral-Beam Spectroscopy	181
VI. Basic Atomic Physics	183
References	186

5B Laser Diagnostics

D. E. Evans

I. Introduction	192
II. Faraday Rotation	192
III. Interferometry	199
IV. Thomson Scattering	211
References	224

5C Plasma Diagnostics Using Electron Cyclotron Emission

D. A. Boyd

I. Introduction	227
II. The Theory of Electron Cyclotron Emission	229
III. Instrumentation	233
IV. Applications	240
V. Concluding Remarks	244
References	246

5D Particle Plasma Diagnostics

C. F. Barnett

I. Introduction	249
II. Particle Diagnostic Atomic Physics	251
III. Neutral-Particle Spectrometers Used in Determining Ion Temperatures	257
IV. Plasma Ion Density and Effective Charge by Neutral-Beam Attenuation	278
V. Beam Scattering Diagnostics	282
VI. Impurity Ion Density	286
VII. Magnetic Field Measurements	290

VIII. Heavy-Ion Beam Probe	296
References	303
5E The Electron Bremsstrahlung Spectrum from Neutral Atoms and Ions	
<i>R. H. Pratt and I. J. Feng</i>	
I. Introduction	307
II. Bremsstrahlung in a Plasma: Observables and Assumptions	308
III. Coulomb Spectrum	311
IV. Atomic Electron Screening Effects for an Isolated Atom or Ion	313
V. End Points of the Spectrum: Elastic Scattering and Direct Radiative Recombination	315
VI. Angular Distributions and Polarization Correlations	317
VII. Bremsstrahlung Emission in Hot Dense Plasmas	318
References	319
6 Heating of Plasma by Energetic Particles	
6A Introduction	325
<i>M. F. A. Harrison</i>	
Reference	326
6B Trapping and Thermalization of Fast Ions	
<i>J. G. Cordey</i>	
I. Introduction	327
II. Fast-Ion Deposition	328
III. The Slowing Down of the Fast Ions	332
IV. Energy and Momentum Transfer Rates	334
V. Effect on Plasma Temperature, Current, and Rotation	335
References	338
6C Neutral-Beam Formation and Transport	
<i>T. S. Green</i>	
I. Introduction	339
II. Ion Beam Extraction and Acceleration	341
III. Plasma Sources for Positive Ions	352
IV. Beam Transport in a Gas Neutralizer	363
V. Negative-Ion Beams	372
References	378
6D Alpha-Particle Heating	
<i>D. E. Post</i>	
I. Alpha-Particle Production and Heating	381
II. Fast-Alpha-Particle Diagnostics	387
III. Alpha-Particle Ash	390
References	393

7 Boundary Plasma

M. F. A. Harrison

I. Description of the Boundary Region	395
II. The Boundary of a Toroidal Device	399
III. The Sheath and Long-Range Electric Field Regions	413
IV. Particle-Surface Interactions	416
V. Atomic Processes in the Boundary Plasma	423
VI. Significance of the Boundary Plasma	436
References	437

8 Atomic Phenomena in Hot Dense Plasmas

Jon C. Weisheit

I. Introduction	441
II. The Plasma Environment	443
III. Perturbations of Atomic Structure	450
IV. Perturbations of Atomic Collisions	460
V. Formation of Spectral Lines	467
VI. Dielectronic Recombination	479
References	482
