<i>List of Contributors</i>	ix
<i>Treatise Preface</i>	xi
<i>Preface</i>	xiii

1 Introduction and Overview

David L. Huestis

I. Introduction to Gas Lasers	1
II. Historical Summary	4
III. Principles of Laser Systems	17
IV. Future Directions	31
References	31

2 Negative Ion Formation in Gas Lasers

P. J. Chantry

I. Introduction	35
II. Role of Negative Ions in Gas Lasers	38
III. Mechanism of Formation	43
IV. Measurement Techniques	46
V. Critical Review of Data	53
References	68

3 High Pressure Ion Kinetics

W. J. Wiegand

I. Introduction	71
II. Ion-Molecule Reaction Rates	72
III. Energy Considerations in Ion Reactions	80
IV. Termolecular Ion Kinetics in Glow Discharges	90
V. Sources of High Pressure Ion Kinetic Data	93
VI. Concluding Remarks	95
References	96

4 Relaxation of Molecules Exchanging Vibrational Energy*J. William Rich*

I. Introduction	99
II. Kinetic Equation Description	100
III. Experimental Applications	116
References	137

5 Ion-Ion Recombination in High Pressure Plasmas*M. R. Flannery*

I. Recent Theoretical Advances	141
II. Recombination as a Function of Gas Density	143
III. Basic Microscopic Theory of Recombination	150
IV. Recombination Rates for Various Rare-Gas Halide Systems	166
V. Conclusion	170
References	171

6 Electron-Ion Recombination in Gas Lasers*Manfred A. Biondi*

I. Introduction	173
II. Basic Processes and Definitions	174
III. Magnitudes and Energy Dependences of the Recombination Coefficients	177
IV. Regions of Importance for the Various Recombination Processes	181
V. Product States of Recombination	184
VI. Laser Applications	187
References	188

7 Collision Processes in Chemical Lasers*J. J. Hinchen*

I. Introduction	191
II. Vibration-to-Rotation Energy Transfer	193
III. Rotational Population Transfer	208
IV. Collisional Rates from Pressure Broadened Linewidths	219
V. Concluding Remarks	222
References	222

8 High Energy CO₂ Laser Amplifiers*Wallace T. Leland*

I. Introduction	225
II. CO ₂ Laser Inversion Physics	226
III. Efficiency of CO ₂ Laser Amplifiers	242
References	249

**9 Spectroscopy and Excited State Chemistry
of Excimer Lasers***Joel Tellinghuisen*

I. Introduction	251
II. Spectroscopy of Excimer Systems	253
III. Excited State Chemistry	266
References	268

10 Rare-Gas Halide Lasers*M. Rokni and J. H. Jacob*

I. Introduction	273
II. Formation Kinetics of the Upper Laser Level	276
III. Quenching Kinetics of the Rare-Gas Halides	286
IV. Pumping Considerations	291
V. Power Extraction	301
References	315

**11 Properties of Electron-Beam Controlled XeCl ($B \rightarrow X$)
and HgBr ($B \rightarrow X$) Laser Discharges***William L. Nighan*

I. Introduction	319
II. Electron-Beam Controlled Discharges	321
III. Rare-Gas Halide and Mercury Halide Lasers	325
IV. Excited State and Ionic Kinetics	332
V. Summary	344
References	345

12 Transient Optical Absorption in the Ultraviolet*L. F. Champagne*

I. Introduction	349
II. Absorption in Pure Rare Gases	350
III. Binary Mixtures	369
IV. An Example	373
V. Uniformly Distributed Loss	378
References	385

13 Preionized Self-Sustained Laser Discharges*Laurence E. Kline and Louis J. Denes*

I. Introduction	387
II. Preionized Self-Sustained Laser Discharge Experiments	390
III. Ultraviolet Preionization Physics	399

IV. Self-Sustained Glow Discharge Physics	409
V. Discussion	418
References	419

14 Stability of Excimer Laser Discharges

Roger A. Haas

I. Introduction	423
II. Ionization Instability—General Theoretical Results	425
III. Ionization Instability in KrF* Laser Discharges	435
IV. Summary and Conclusions	443
Appendix A. Ionization Instability Theory	443
Appendix B. Total Ionization Rate Constants	449
References	451
