

CONTENTS

PREFACE

xi

Chapter 1. Introduction

1.1. Accuracy and Errors	2
1.2. Mechanical Analogy	4
1.3. Cross Section	7
1.4. Binding Energy	10
1.5. Mass-Energy Equivalence	12
1.6. Energy Units	12

Chapter 2. Matter

2.1. Elementary Particles	14
2.2. Antiparticles	15
2.3. Forces and Interactions	16
2.4. Electrons	18
2.5. Nucleons	24
2.6. Atomic Nuclei	26
2.7. Atoms	31
2.8. Molecules	36
2.9. Solid State	38

Chapter 3. Radioactive Radiation

3.1. Nuclear Decay as a Source of Radiation	43
3.2. Properties and Classification of Radioactive Radiation	68

Chapter 4. Charged Particles

4.1. Collisions	77
4.2. Energy Loss	84
4.3. Penetration	94
References	99

Chapter 5. Alpha Particles

5.1. Nature of the Alpha Particle Track	100
5.2. Stopping Power	102
5.3. Relative Stopping Power	103
5.4. Range	106
5.5. Specific Ionization	111
5.6. Alpha Particle Beam Broadening	114
References	115

Chapter 6. Electrons

6.1. The Nature of the Electron Track	116
6.2. <i>Bremsstrahlung</i>	118
6.3. Mean Energy Loss $-dE/dx$	124
6.4. Relative Stopping Power	128
6.5. Most Probable Energy Loss	128
6.6. Reflection of Electrons	132
6.7. Specific Ionization	145
6.8. Range	146
6.9. Scattering in Thin Foils	156
6.10. The Passage of Continuous Radiation through a Foil	158
6.11. Spatial Dose Distribution	160
References	162

Chapter 7. Gamma Radiation

7.1. The Photoelectric Effect	165
7.2. The Compton Effect	172
7.3. Pair Production	179
7.4. Summary of the Basic Properties of the Three Effects	183
7.5. Penetration of a Narrow Beam	185
7.6. Broad Beam	207
References	216

Appendixes to Chapters

2. Matter	218
3. Radioactive Decays	220

	Contents	ix
4. Penetration of Charged Particles	222	
5. Alpha Particle Penetration	225	
6. Beta Particle Penetration	228	
7. Penetration of Gamma Rays	233	
General References	236	
INDEX	239
