Preface

xv

PART ONE

ELECTRONS IN ATOMS Atomic Physics

1	Recollections of Quantum Theory : A Survey Chapter	2
1.1	The Wave-Particle Duality	3
1.2	The Schroedinger Wave Equation	4
1.3	Eigenvalue Equations and Operators	7
1.4	Commuting Operators	10
1.5	The Expectation Value	11
1.6	Concluding Remarks	13
	Suggested Readings	13
	Problems	14
2	Solution of the Central Force Problem	16
2.1	Central Forces	17
2.2	The Schroedinger Equation for the Central Force Problem	18
2.3	Orbital Angular Momentum and the L^2 Eigenvalue Problem	22
2.4	Solution of the L^2 Eigenvalue Problem	24
2.5	Full Eigenfunctions of the Central Force Problem	32
	Suggested Readings	38
	Problems	39

3	The One-Electron Atom	45
3.1	The Schroedinger Equation for the One-Electron Atom	46
3.2	Separation of the Center-of-Mass and Relative Motion	47
3.3	The Center-of-Mass Motion	50
3.4	Solution of the Relative Equation	51
3.5	Properties of the Radial Functions	55
3.6	Full Eigenfunctions of the One-Electron Atom Hamiltonian	58
3.7	Properties of the Hydrogenic Wave Functions	62
3.8	Orbital Angular Momentum of the Hydrogenic Atom	70
3.9	Standing Versus Rotating Waves	71
3.10	The Orbital Magnetic Moment	73
	Problems	76
4	The Wonderful World of Approximation Methods (Time Independent)	82
4.1	Nondegenerate, Time-Independent Perturbation Theory	83
4.2	The Variational Principle	92
4.3	The Variational Method	94
4.4	The Linear Variational Method	99
4.5	Nondegenerate Perturbation Theory—Revisited	104
4.6	The Disappearance of Diabolical Degeneracies	106
4.7	The Stark Effect: An Example	110
	Problems	115
5	More Approximation Methods (Time Dependent)	124
5.1	The Care and Treatment of Time-Dependent Perturbations	125
5.2	The Electromagnetic Radiation Field	129
5.3	Harmonic Perturbations	136
*5.4	Frequency Bands	138
	Suggested Readings	140
	Problems	140
6	Spin	145
6.1	A Historical Digression	146
6.2	The Postulate of Electron Spin	148
6.3	The Theory of Electron Spin	149
6.4	The Pauli Spin Matrices and Spin Operators	151
6.5	Some Concluding Remarks	154

7	Spin in the Hydrogenic Atom	156
7.1	New Hydrogenic Eigenfunctions	157
7.2	Derivation of the Spin-Orbit Interaction Term	158
7.3	Coupling of Spin and Orbital Angular Momenta	161
7.4	Spin-Orbit Interaction Energy Correction	167
7.5	The Zeeman Effect	168
7.6	The Saga of Good and Bad Quantum Numbers	170
	Problems	172
8	Introduction to the Quantum Mechanics of the Multielectron Atom	175
8.1	The Many-Particle Problem in Three Dimensions	176
8.2	Identical Particles and Exchange Symmetry	178
8.3	Two Identical Particles in One Dimension	181
8.4	A One-Dimensional N -Electron "Atom"	192
	Problems	198
9	The Shell Model of the Atom	201
9.1	The Orbital Approximation for Atoms	202
9.2	Electron Screening and Atomic Structure	205
9.3	Ground States of N -Electron Atoms	206
9.4	Angular Momentum Coupling in Multielectron Atoms	209
9.5	Russell-Saunders Coupling	211
9.6	Hund's Rules	216
9.7	Concluding Remarks: j - j Coupling	218
	Suggested Readings	220
	Problems	220
10	Quantitative Approaches to Multielectron Atoms	225
10.1	The Two-Electron Atom (Perturbation Theory)	226
10.2	The Two-Electron Atom (the Variational Method)	234
10.3	Multielectron Atoms: The Hartree and Hartree-Fock Theories	235
	Suggested Readings	242
	Problems	242

PART TWO

ELECTRONS IN DIATOMIC MOLECULES
Molecular Physics

11	Introduction to Molecular Physics	248
11.1	Electrostatic Interactions in Molecules	249
11.2	A Qualitative Description of Bonds Between Atoms	251
11.3	The Schroedinger Equation for Molecules	251
	Suggested Readings	255
	Problems	255
 12	 Separation of Electronic and Nuclear Motion : The Born-Oppenheimer Approximation	 259
12.1	Qualitative Introduction to the Born-Oppenheimer Approximation	260
12.2	Qualitative Discussion of the Born-Oppenheimer Approximation	265
*12.3	The Born-Oppenheimer Approximation Revisited: A Perturbation Approach	267
	Problems	272
 13	 An Exactly Soluble One-Dimensional Model of a One-Electron Diatomic Molecule	 276
13.1	The Double Square Well (a PWOP)	278
13.2	The Double-Square-Well Correlation Diagram	287
13.3	Double-Square-Well Wave Functions	291
13.4	Some Final Remarks (and Two "Proofs")	295
	Problems	299
 14	 A Qualitative Look at Three-Dimensional Molecules	 304
14.1	On Two-Dimensional Molecules	305
14.2	Symmetry of Three-Dimensional Molecules	309
14.3	Electronic States of the Heteronuclear Molecule	313
14.4	Electronic States of the Homonuclear Molecule	319
14.5	Some Concluding Remarks on Angular Momentum	324
	Suggested Readings	325
	Problems	326

15	The LCAO : MO Method of Calculating Approximate Molecular Orbitals	329
15.1	Introduction to the LCAO: MO Method	330
15.2	An LCAO: MO Study of the Symmetric Double Square Well (a PWOP)	333
15.3	LCAO: MO Treatment of the σ States of the Homonuclear Diatomic Molecule	340
15.4	LCAO: MO Treatment of the σ States of the Heteronuclear Diatomic Molecule	346
15.5	Some Concluding Remarks	352
	Suggested Readings	353
	Problems	353
 16	 The Electronic States of Multielectron Molecules	 358
16.1	The Orbital Approximation for Molecules	359
16.2	Return of the Double Square Well	361
16.3	Three-Dimensional Polyelectronic Molecules	369
*16.4	The Valence-Bond Method	374
	Suggested Readings	376
	Problems	376
 17	 Solution of the "Nuclear Problem"	 381
17.1	The "Nuclear Problem"	381
17.2	Separation of the Center-of-Mass and Relative Motion	383
17.3	Vibrational and Rotational Motion	384
	Suggested Readings	388
	Problems	388

PART THREE**ELECTRONS IN CRYSTALLINE SOLIDS**
Solid-State Physics

18	Crystals : Structure and Symmetry	392
18.1	Introductory Remarks	393
18.2	Symmetry of Crystalline Solids	395
18.3	Classification of Two-Dimensional Lattices and Crystals	400
18.4	Three-Dimensional Crystals	405
	Suggested Readings	408
	Problems	408

19	Foundations : Bloch's Theorem, the Reciprocal Lattice, and Brillouin Zones	412
19.1	Bloch's Theorem	412
19.2	The Reciprocal Lattice	418
19.3	Brillouin Zones Made Simple	424
19.4	Electronic States "In" a Brillouin Zone	431
	Suggested Readings	433
	Problems	433
 20	 The Free-Electron and Weak-Binding Approximations (One Dimension)	 437
20.1	The Free-Electron Approximation	438
20.2	The Density of States in the Free-Electron Approximation	442
20.3	Introduction to the Weak-Binding Approximation	447
20.4	Strongly Mixed States	450
20.5	The Density of States in the Weak-Binding Approximation	456
	Suggested Readings	459
	Problems	459
 21	 The Kronig-Penney Model	 462
21.1	Exact Analysis of the Kronig-Penney Model (a PWOP)	463
21.2	The Kronig-Penney Model in the Weak-Binding Approximation	474
	Suggested Readings	478
	Problems	479
 22	 The Free-Electron and Weak-Binding Approximations (Two Dimensions)	 482
22.1	The Free-Electron Approximation	483
22.2	The Density of States in the Free-Electron Approximation	490
22.3	The Weak-Binding Approximation	497
22.4	The Weak-Binding Density of States	504
	Problems	506
 23	 Energy Band Theory of Three-Dimensional Crystals	 513
23.1	Free-Electron Energy Bands	514
23.2	Other Representations of Energy in k -Space	517
23.3	The Fermi Surface and the Density of States	520
23.4	The Weak-Binding Approximation in Three Dimensions	524
	Problems	526

24	Final Topics	529
24.1	Optical Absorption in Solids	530
24.2	Conductivity of Solids	535
24.3	Electronic Heat Capacity of Solids	543
*24.4	Lattice Vibrations in Solids	545
	Suggested Readings	549
	 Epilogue : Retrospective Comments	 550
	 Appendices	 553
1.	Fundamental Constants and Conversion Factors	554
2.	Atomic Units	555
3.	Expectation Values of Several Important Operators	556
4.	Clebsch-Gordan Coefficients	557
5.	Table of Atomic Properties	559
	 Bibliography	 563
	 Index	 565
