

CONTENTS

PREFACE	ix
ACKNOWLEDGMENTS	xi
LIST OF ACRONYMS	xiv

CHAPTER I INTRODUCTION

A. Basis Sets	3
B. Hamiltonian Matrix Elements	4
C. The Hartree–Fock–Roothaan Equations	5
D. Configuration Mixing (CM)	9
E. Multiconfiguration Self-Consistent Field (MCSCF) Wave Functions	11
F. Density Matrices and Natural Orbitals	14
G. Electron Pair Methods	18
References	21

CHAPTER II ONE-ELECTRON MOs AS PROTOTYPES

A. H ₂ ⁺ MOs in Elliptical Coordinates	24
B. LCAO and LCSTF Expansions; Basis Sets; LCMAOs	28
C. Spectroscopic Transition Probabilities	31
D. HeH ²⁺ MOs	32
E. Population Analysis	33
F. The Nature of Covalent Binding	38
References	43

CHAPTER III TWO- TO FOUR-ELECTRON SYSTEMS

A. Exact Calculations on H ₂	44
B. N, T, V, Z States of H ₂	45
C. Applications of SCF Calculations	49
D. Electron Correlation	49
E. Rydberg States	52
F. Spectroscopic Transition Probabilities	58
G. Polarizability of H ₂	59
H. H ₂ ⁻ , H ₂ +H, H ₃ ⁺ , H ₃ ²⁺	60
I. The He ₂ Molecule and Its Ions	61
J. HeH, HeH ⁺ ; He+H ₂ ; H ₂ +H ₂ ; H ₄ ⁺	64
References	65

CHAPTER IV DIATOMIC HYDRIDES

A. SCF Calculations	69
B. Charge Distributions	75
C. Population Analysis and Bonding	77
D. Electron Correlation	89
E. Calculations on Selected Molecules	97
References	104

CHAPTER V HOMOPOLAR DIATOMIC MOLECULES

A. SCF Calculations	107
B. Orbital Energies and Ionization Energies	114
C. Momentum Wave Functions and Momentum Densities	118
D. Charge Distributions	118
E. Population Analysis and Bonding	119

CONTENTS**vii**

F. Electron Correlation	136
G. Mixed V States	139
H. Rydberg States	140
I. Bonding and Binding	147
J. The Computation of Miscellaneous Properties	154
References	154

CHAPTER VI HETEROPOLAR DIATOMIC MOLECULES

A. SCF Calculations	157
B. Molecular Multiplets	163
C. Charge Distributions	165
D. Population Analysis and Bonding	170
E. Bonding and Binding	179
F. Correlated Wave Functions; Dipole Moments	183
References	189
