

# Contents

## 1. Quantum Mechanics of Electron-Atom Scattering

<i>Introduction</i> . . . . .	1
1.1. Structure of the Wave Function . . . . .	2
1.2. Cross Sections . . . . .	6
1.3. Close-Coupling Expansion . . . . .	8
1.4. Polarization Potentials and Pseudostates . . . . .	11
1.5. Continuum Bethe-Goldstone Equations . . . . .	14
1.6. Generalizations of the Bethe-Goldstone Approximation . . . . .	18

## 2. Variational Theory

<i>Introduction</i> . . . . .	25
2.1. Formalism for Multichannel Scattering . . . . .	26
2.2. The Hulthén-Kohn Variational Principle and Variational Bounds . . . . .	30
2.3. Anomalies in the Kohn Formalism . . . . .	35
2.4. Anomaly-Free Methods . . . . .	42
2.5. Variational $R$ -Matrix Method . . . . .	50
2.6. Hybrid Methods . . . . .	58
2.7. The Schwinger Variational Principle . . . . .	64

## 3. Resonances and Threshold Effects

<i>Introduction</i> . . . . .	79
3.1. Electron Scattering Resonances . . . . .	80
3.2. Theory of Resonances . . . . .	86
3.3. Scattering Near Thresholds . . . . .	96
3.4. The Stabilization Method . . . . .	106
3.5. Adiabatic Theory of Perturbed Target States . . . . .	113

**4. Computational Technique**

<i>Introduction</i> . . . . .	119
4.1. Reduction to One- and Two-Electron Integrals . . . . .	119
4.2. Vector Coupling and Angular Integrals . . . . .	125
4.3. Radial Integrals . . . . .	135
4.4. Structure of a Computer Program . . . . .	140

**5. Applications to One-Electron Atoms**

<i>Introduction</i> . . . . .	145
5.1. Hydrogen: Elastic Scattering . . . . .	146
5.2. Hydrogen: Inelastic Scattering . . . . .	152
5.3. Alkali Metal Atoms . . . . .	157

**6. Applications to Other Atoms**

<i>Introduction</i> . . . . .	169
6.1. Helium: Elastic Scattering . . . . .	170
6.2. Helium: Inelastic Scattering . . . . .	182
6.3. Carbon, Nitrogen, and Oxygen . . . . .	196
