

Contents

Atomic Processes P. G. BURKE

I	Potential Scattering	1
II	Multichannel Scattering	8
III	Electron Scattering by Hydrogen Atoms and Hydrogen-like Ions	..							15
IV	Electron Scattering by Complex Atoms and Ions	26
V	Photoionization and Recombination	39
VI	Molecular Processes	49

Highly Excited Atoms

IAN C. PERCIVAL

I	Introduction	65
II	Elementary properties	65
III	Correspondence principle for intensity	68
IV	Classical collisions	69
V	Discrete states	70
VI	Scaling laws	71
VII	Initial conditions	72
VIII	Binary encounter or classical impulse approximation	..							72
IX	Orbit integration and Monte Carlo method	..							74
X	Correspondence principles	75
XI	Heisenberg's form	76
XII	Strong coupling	77
XIII	Ranges of validity	77
XIV	Cross-sections (quantal)	79
XV	Cross-sections (correspondence)	80
XVI	Literature	81

Spectral Line Broadening

H. VAN REGEMORTER

INTRODUCTION	85
I Basic Principles	86
II The Semi-classical Approach	93
III Quantum Theory of Line Broadening	102
IV Applications to a Few Cases	110

The Spectra of Gaseous Nebulae

M. J. SEATON

I Introduction	121
II Physical Processes	122
III Ionization Equilibrium	122
IV Observed Line Intensities	125
V Electron Temperatures and Forbidden Lines	125
VI Model Calculations	128
VII Optical Observations of Recombination Lines	130
VIII Interpretation of Line Observations	131
IX The Spectra of Neutral Helium	131
X The Optical Continuum	132
XI The Radio Continuum	133
XII Radio Recombination Lines	135
XIII Helium and Carbon Recombination Lines	147
Appendix	149

Introduction to Molecular Spectra

H. M. FOLEY

I The Molecular Wave Equation	156
II Properties of the Electronic States	158
III Rotation and Vibration	162
IV Symmetry and Statistics	163
V Electronic Dipole Matrix Element-Selection Rules	165
VI Vibration-Rotation and Rotation Spectra	168
VII Spin-Orbit Interaction and Higher Order Rotational Effects	170
VIII Rotation of Polyatomic Molecules	175

CONTENTS

xi	Astrophysical Observations	187
xii	The Astrophysical Molecules	189
xiii	Literature	198

Non-Equilibrium Processes in Interstellar Molecules**M. M. LITVAK**

I	Introduction	201
II	Observation of Maser Molecules	206
III	Non-Equilibrium Conditions	221
IV	Nonlinear Properties of Masers	244
V	Formation of Molecules	259

Radio Recombination Lines: An Observer's Point of View**E. CHURCHWELL**

I	General Considerations	277
II	Importance of Radio Recombination Lines in Astronomy	278

Some Recent Aspects of Spectroscopy at UV and X-Ray Wavelengths**R. J. SPEER**

I	Introduction	285
II	Ultraviolet Spectroscopy at Total Solar Eclipse	293
III	Light Sources	298
IV	Diffraction Gratings	302

Spectral Intensities from Helium-Like Ions**A. H. GABRIEL**

I	Introduction	311
II	Temperature and Density Measurement	311
III	The Helium-like Ion	313
IV	Low Density	316
V	Intermediate Density	317
VI	High Density	317
VII	Conclusions	318

Abundances in the Solar Corona

H. OLTHOF

321

The Formation of H₂ Molecules in Dark Interstellar Clouds

T. DE JONG

Formation of Molecular Hydrogen on Cold Surfaces

A. SCHUTTE

337

Emission-line Spectra as Probes of Dust Clouds

B. E. J. PAGEL

The Investigation of UV Oscillator Strengths in C, N and O Ions

JEFFRY V. MALLOW
