

CONTENTS

Geometric Methods in Spectral and Scattering Theory of Schrödinger Operators	1
V. Enss	
Stationary Scattering Theory	71
J.M. Combes	
Spectral Properties and Asymptotic Evolution in Potential Scattering	99
D.B. Pearson	
Schrödinger Operators with External Homogeneous Electric and Magnetic Fields	131
I.W. Herbst	
The Born-Oppenheimer Approximation	185
J.M. Combes, P. Duclos, and R. Seiler	
Thomas-Fermi and Related Theories of Atoms and Molecules	213
E. Lieb	
The Stability of Matter	309
W. Thirring	
Phase Diagrams and Critical Properties of (Classical) Coulomb Systems	327
J. Fröhlich and T. Spencer	
Debye Screening in Classical Coulomb Systems	371
D.C. Brydges and P. Federbush	
Internal Structure of Coulomb Systems in One Dimension	441
M. Aizenman	

Free Energy and Correlation Functions of Coulomb Systems	467
J.L. Lebowitz	
List of Seminars	489
Index	491
