PART I SPECTROSCOPY

1. Spectroscopy of Molecular Beams: An Overview, 3

T. E. Gough

- 1.1 Introduction, 3
- 1.2 Propagation of Diffraction-Limited Gaussian Beams, 4
- 1.3 Laser Beam–Molecular Beam Interactions: Weak Limit, 6
- 1.4 Quantum Mechanical Description, 8
 - 1.4.1 *Weak Limit, 8*
 - 1.4.2 *General Case, 10*
- 1.5 Conclusion 13

2. Magnetic and Electric Resonance Spectroscopy, 15

J. S. Muentert

- 2.1 Introduction, 15
- 2.2 Experimental Considerations for Molecular Beam Spectroscopy, 16
 - 2.2.1 *Vacuum Chambers, 16*
 - 2.2.2 *Molecular Beam Sources 18*
 - 2.2.3 *Deflecting Fields, 20*
 - 2.2.4 *Resonance Fields, 26*
 - 2.2.5 *Radiation Sources, 33*
 - 2.2.6 *Beam Detection and Signal Processing, 38*
 - 2.2.7 *Experimental Examples, 41*
- 2.3 Optically Selected and Detected Molecular Beam Resonance Experiments, 44
- 2.4 Applications of Beam Resonance Spectroscopy, 46
- 2.5 Data Analysis, 51
- 2.6 Conclusions, 52

3. Beam-maser Spectroscopy, 58**A. Dymanus**

- 3.1 Historical Note, 58
- 3.2 Beam-maser Principles, 59
- 3.3 Beam-maser Techniques, 62
 - 3.3.1 *Sources*, 62
 - 3.3.2 *Inverting Structures*, 64
 - 3.3.3 *Stimulating Field Structures*, 67
 - 3.3.4 *Detection System and Sensitivity*, 73
 - 3.3.5 *Special Techniques*, 76
- 3.4 Applications, 79
 - 3.4.1 *Spectroscopy of Atoms*, 79
 - 3.4.2 *Spectroscopy of Molecules*, 83
 - 3.4.3 *Collisional Studies*, 94

4. Quantum Amplifiers and Oscillators, 103**D. C. Lainé**

- 4.1 Introduction, 103
- 4.2 Molecular Beam Masers with Electrostatic State Selection, 104
 - 4.2.1 *Basic System*, 104
 - 4.2.2 *Molecular Beam Maser Amplifiers*, 105
 - 4.2.3 *Molecular Beam Maser Oscillators*, 106
- 4.3 Atomic Beam Masers with Magnetic State Selection, 112
 - 4.3.1 *Principles of Operation*, 112
 - 4.3.2 *Experimental Methods for Hydrogen Masers*, 114
 - 4.3.3 *Maser Signal Detection*, 117
 - 4.3.4 *Applications of the Hydrogen Maser*, 119
- 4.4 Rydberg–Atom Beam Masers, 120
 - 4.4.1 *Beam Preparation and the Rydberg–Atom Beam Maser*, 120
 - 4.4.2 *Dynamic Properties of Rydberg–Atom Beam Masers*, 123
 - 4.4.3 *Applications*, 125
- 4.5 Dimer Beam Lasers, 126
- 4.6 Radiation Generation Through Beam Nonlinearities, 128

5. Metrology with Molecular Beams, 132**D. C. Lainé**

- 5.2 Introduction, 132
- 5.2 Active Beam Frequency Standards, 136
 - 5.2.1 *Introduction*, 136
 - 5.2.2 *The Ammonia Maser Oscillator*, 137
 - 5.2.3 *The Hydrogen Maser Oscillator*, 141
 - 5.2.4 *Other Types of Beam-Excited Oscillators*, 149

- 5.3 **Passive Beam Frequency Standards, 150**
 - 5.3.1 *Introduction, 150*
 - 5.3.2 *The Cesium Beam Frequency Standard, 153*
 - 5.3.3 *Other Types of Atomic Beam Frequency Standards, 163*
 - 5.3.4 *Molecular Beam Frequency Standards, 170*
 - 5.3.5 *Optical Ramsey Resonances, 173*
 - 5.3.6 *Beams of Slowed Atoms, 175*
- 5.4 **Intercomparison of Beam and Other Frequency Standards, 178**
- 5.5 **Atomic Beams and Standards of Length and Voltage, 181**
- 5.6 **Applications of Beam Frequency Standards, 182**
 - 5.6.1 *Radioastronomy, 183*
 - 5.6.2 *Relativity, 183*
 - 5.6.3 *Navigation, 183*
 - 5.6.4 *Communications, 184*
 - 5.6.5 *Standards of Length and Voltage, 184*
 - 5.6.6 *Spectroscopic Studies, 184*
 - 5.6.7 *Other Applications, 185*

6. Infrared Laser Spectroscopy, 192

R. E. Miller

- 6.1 **Introduction, 192**
- 6.2 **Experimental Techniques, 193**
 - 6.2.1 *Direct Absorption, 193*
 - 6.2.2 *Laser-Induced Fluorescence, 194*
 - 6.2.3 *Optothermal Detection, 196*
 - 6.2.4 *Mass Spectrometric Detection, 197*
 - 6.2.5 *Far-Infrared Laser Methods, 199*
- 6.3 **Infrared Laser Sources, 199**
 - 6.3.1 *Diode Lasers, 201*
 - 6.3.2 *F-Center Lasers, 201*
 - 6.3.3 *Difference Frequency Lasers, 202*
 - 6.3.4 *CW Line-Tunable Lasers, 202*
 - 6.3.5 *Far-Infrared Lasers, 203*
 - 6.3.6 *Pulsed Lasers, 203*
- 6.4 **Sensitivity, 203**
- 6.5 **Resolution, 207**
- 6.6 **Summary, 210**

7. Visible and Ultraviolet Spectroscopy: Physical Aspects, 213

W. Demtröder

- 7.1 **Introduction, 213**
- 7.2 **Spectral Profiles of Absorption Lines in Collimated Beams, 215**

- 7.2.1 *Reduction of the Doppler Width*, 215
- 7.2.2 *Transit Time Broadening*, 217
- 7.2.3 *Saturation and Power Broadening*, 218
- 7.3 Sensitive Detection Techniques, 219
 - 7.3.1 *Excitation Spectroscopy*, 220
 - 7.3.2 *Two-Photon Ionization (TPI) Spectroscopy*, 221
 - 7.3.3 *Pulsed Versus CW Lasers for TPI Spectroscopy*, 222
 - 7.3.4 *Coherent Anti-Stokes Raman Spectroscopy*, 224
- 7.4 Laser Spectroscopy in Effusive and Supersonic Beams, 225
 - 7.4.1 *Laser Spectroscopy in Collimated Effusive Beams*, 225
 - 7.4.2 *Simplification of Molecular Spectra in Cold Beams*, 228
 - 7.4.3 *Measurements of Velocity Distributions*, 229
 - 7.4.4 *Measurements of Rotational and Vibrational Temperatures*, 231
 - 7.4.5 *Examples of Molecular Spectroscopy in Supersonic Beams*, 233
- 7.5 Special Techniques of Molecular Beam Spectroscopy, 235
 - 7.5.1 *Nonlinear Laser Spectroscopy in Molecular Beams*, 235
 - 7.5.2 *Optical Double-Resonance Spectroscopy*, 238
 - 7.5.2.1 *Optical–Optical V-type Double Resonance*, 239
 - 7.5.2.2 *Stepwise Excitation and Selective Population of Rydberg States*, 242
 - 7.5.2.3 *Optical–Radiofrequency Double Resonance Spectroscopy in Molecular Beams*, 244
 - 7.5.3 *Time-Resolved Laser Spectroscopy in Molecular Beams*, 246
 - 7.5.4 *Coherent Spectroscopy in Molecular Beams*, 247
 - 7.5.4.1 *Quantum Beat Spectroscopy*, 247
 - 7.5.3.2 *Level-Crossing Spectroscopy*, 249
 - 7.5.5 *Optical Cooling of Atomic Beams*, 250
- 7.6 Coaxial Laser Spectroscopy in Fast Beams, 252
- 7.7 Conclusion, 256

8. Photofragment Spectroscopy, 261

J. W. Hepburn

- 8.1 Introduction, 261
- 8.2 The Photofragment Spectroscopy Experiment, 262
- 8.3 Photofragment Translational Spectroscopy, 265
 - 8.3.1 *Apparatus*, 265
 - 8.3.2 *Signal*, 268
 - 8.3.3 *Determination of Primary Photochemistry*, 269
 - 8.3.4 *Product Energy Distributions*, 270
 - 8.3.5 *Product Angular Distributions*, 272

- 8.4 State-to-state Photochemistry: Laser Detection of Photofragments, 273
 - 8.4.1 Apparatus, 273
 - 8.4.2 Product Energy Distributions and Product Induction Times, 276
 - 8.4.3 Doppler Spectroscopy and Product Correlations, 277
 - 8.4.4 Recent Developments, 281
- 8.5 Photofragmentation of Glyoxal, 282
- 8.6 Photolytic Supersonic Sources, 285

9. Fourier-Transform Microwave Spectroscopy, 289

A. C. Legon

- 9.1 Introduction, 289
- 9.2 The Spectrometer, 290
 - 9.2.1 Physical Principles and the Sequence of Events, 290
 - 9.2.2 Formation and Properties of the Gas Pulse, 292
 - 9.2.3 Formation of the Microwave Radiation Pulse, 294
 - 9.2.4 Interaction of the Radiation and Gas Pulses within the Fabry-Pérot Cavity, 295
 - 9.2.5 Coherent Spontaneous Emission from the Gas and Its Detection, 296
 - 9.2.6 Modification to Allow Investigation of Rotational Stark and Zeeman Effects, 300
- 9.3 Shape and Intensity of Observed Rotational Transitions, 300
 - 9.3.1 Lineshape and Resolution, 300
 - 9.3.2 Sensitivity, 303
- 9.4 Molecular Properties of Weakly Bound Dimers from Ground-State Rotational Spectra, 305

10. Fourier-Transform Methods: Infrared, 309

J. J. Sloan

- 10.1 Introduction, 309
- 10.2 Experimental Aspects, 310
 - 10.2.1 The Michelson Interferometer, 310
 - 10.2.2 Observed Interference Signal, 310
 - 10.2.3 Resolution and Lineshape, 312
 - 10.2.4 Signal-to-Noise Considerations, 313
 - 10.2.5 Field-of-View Considerations, 314
 - 10.2.6 Signal Requirements, 316
- 10.3 Computational Aspects, 319
 - 10.3.1 Discrete Data Sampling, 319
 - 10.3.2 The Discrete Fourier Transform, 319
 - 10.3.3 Numerical Methods Based on Transforms, 319

PART II SURFACE SCATTERING

11. General Principles and Methods, 327**U. Valbusa**

- 11.1 Introduction, 327
- 11.2 Experimental Techniques for Gas–Surface Scattering, 330
 - 11.2.1 *General Requirements of a Surface-Scattering Apparatus*, 330
 - 11.2.2 *Sources*, 330
 - 11.2.3 *Scattering Chamber*, 334
 - 11.2.4 *Crystal Manipulator*, 335
 - 11.2.5 *Detector*, 335
 - 11.2.6 *Surface Preparation*, 336

12. Elastic Scattering of Atoms, 340**G. Boato**

- 12.1 Introduction, 340
- 12.2 Experimental Methods, 342
 - 12.2.1 *Physical Conditions and Technical Requirements for Elastic Scattering Experiments*, 342
 - 12.2.2 *Typical Diffractive Scattering Experiments*, 344
 - 12.2.3 *The Analysis of Elastic Diffraction Patterns and Its Problems*, 346
- 12.3 Surface Structure and Corrugation, 350
 - 12.3.1 *Rainbow Scattering (Classical Interpretation)*, 350
 - 12.3.2 *Hard Corrugated Wall Model (Quantum Theory)*, 352
 - 12.3.3 *Realistic Potentials and Close-Coupling Calculations*, 354
- 12.4 The Average Atom–Surface Potential Well Derived from Measurements of Resonances, 355
 - 12.4.1 *Experimental Conditions for Observing and Assigning Resonant Structures*, 355
 - 12.4.2 *Band Structure Effects*, 358
- 12.5 Thermal Attenuation of Elastic Intensities, 360

13. Rotational Inelastic Scattering, 366**L. Mattera**

- 13.1 Introduction, 366
- 13.2 Experimental Methods, 368
 - 13.2.1 *Molecular Hydrogen Beams*, 368
 - 13.2.2 *Elastic Scattering*, 371
 - 13.2.3 *Rotationally Inelastic Diffraction Peaks*, 374
- 13.3 Bound-State Resonances, 377
 - 13.3.1 *Diffractively Mediated Selective Adsorption*, 377
 - 13.3.2 *Rotationally Mediated Selective Adsorption*, 380
- 13.4 Conclusions, 382

14. Single-Phonon Inelastic Helium Scattering, 384

R. B. Doak

- 14.1 Introduction, 384
 - 14.1.1 *Why Helium Beams?*, 385
 - 14.1.2 *Scope of This Chapter*, 387
- 14.2 Phonons, 387
 - 14.2.1 *Phonon Dispersion and Interatomic Bonding*, 390
 - 14.2.2 *Surface Phonons*, 391
- 14.3 Measuring Surface Phonons with Helium Scattering, 395
 - 14.3.1 *Experimental Data*, 396
 - 14.3.2 *Kinematics*, 398
 - 14.3.3 *Non constant Q Scans*, 402
 - 14.3.4 *Transforming from TOF to ΔE* , 403
- 14.4 Understanding the Data: Complications and Pitfalls, 404
 - 14.4.1 *Weare Parameter, Thermal Distributions*, 405
 - 14.4.2 *Kinematical Focusing*, 406
 - 14.4.3 *Bound-State Resonances*, 407
 - 14.4.4 *Phonyons*, 408
- 14.5 Energy Analysis: Time-of-flight Considerations, 411
 - 14.5.1 *TOF Timing and Calibration*, 411
 - 14.5.2 *Baseline Resolution, Elastic Scattering*, 414
 - 14.5.3 *Baseline Resolution, Inelastic Scattering*, 415
- 14.6 Experimental Apparatus, 420
 - 14.6.1 *Scattering Angles*, 423
 - 14.6.2 *Variable θ_{sd}* , 425
 - 14.6.3 *Beam Source*, 427
 - 14.6.4 *Beam Collimation*, 429
 - 14.6.5 *Beam Chopper*, 431
 - 14.6.6 *Target Chamber*, 434
 - 14.6.7 *Differential Pumping*, 436
 - 14.6.8 *Variable Flight Path*, 437
 - 14.6.9 *Detector*, 438
 - 14.6.10 *Computer Control*, 439

15. Multiple-Phonon Inelastic Scattering, 444

D. J. Auerbach

- 15.1 Introduction and Scope, 444
- 15.2 Experimental Methods, 445
 - 15.2.1 *Instrumental Considerations*, 446
 - 15.2.2 *Classification of Experimental Methods*, 447
- 15.3 Angular Distributions, 449
 - 15.3.1 *Examples and Interpretation*, 449
 - 15.3.2 *Limitations*, 451

- 15.4 Velocity Distributions, 451
 - 15.4.1 *Interpretation of Time-of-Flight Data*, 452
 - 15.4.2 *Direct Inelastic and Trapping-Desorption Scattering*, 454
 - 15.4.3 *Direct Inelastic Scattering*, 455
 - 15.4.4 *Angular and Velocity Distributions for Molecules*, 456
- 15.5 State-Resolved Measurements, 457
 - 15.5.1 *Rotational and Vibrational Inelastic Scattering*, 457
 - 15.5.2 *State Selection with Velocity Resolution*, 460
 - 15.5.3 *Experiments with State Prepared Beams*, 461
- 16. Scattering from Disordered Surfaces, 463**
G. Comsa and B. Poelsema
 - 16.1 Introduction, 463
 - 16.2 TEAS from Ideal Close-Packed Metal Surfaces, 465
 - 16.2.1 *Short History*, 465
 - 16.2.2 *Deviations from Ideality of Close-Packed Metal Surfaces*, 466
 - 16.2.2.1 *Periodic Deviations*, 466
 - 16.2.2.2 *Nonperiodic Deviations*, 466
 - 16.3 Principle of the Methods to Investigate Disorder, 467
 - 16.3.1 *Scattering from a Disordered Distribution of Adsorbates and Defects*, 467
 - 16.3.1.1 *Total Cross-section for Diffuse Scattering*, 467
 - 16.3.1.2 *The Origin of the Cross-section for Diffuse Scattering*, 468
 - 16.3.1.3 *The Angular Dependence of Σ : Experimental and Theoretical Language*, 468
 - 16.3.1.4 *The Overlap Approach*, 469
 - 16.3.1.5 *The High Coverage Region*, 470
 - 16.3.1.6 *Overlap Between Cross-sections of Different Species*, 471
 - 16.3.2 *Scattering from Terraces of Random Width*, 472
 - 16.4 “Ideal” Surfaces and Experiments, 474
 - 16.5 Mutual Interaction Between Adsorbates, Between Defects, and Between Adsorbates and Defects (Examples), 476
 - 16.5.1 *Mutual Repulsion of Adsorbates CO/Pt(111)*, 476
 - 16.5.2 *Mutual Attraction Between Mobile Adsorbates: Xe/Pt(111)*, 476
 - 16.5.3 *Mutual Attraction Between Vacancies with Restricted Mobility: Pt(111) at $T_s = 80$ K*, 477
 - 16.5.4 *Attraction Between Adsorbates and Defects*, 477
 - 16.5.4.1 *Adsorption on a Surface with Defects*, 478
 - 16.5.4.2 *Direct Monitoring of Adsorbate Diffusion*, 479
 - 16.5.4.3 *Control Experiment—Defects and Islands*, 479

- 16.6 The Monitoring of Adsorbate Coverage and Adsorption/Desorption Kinetics (Examples), 480
- 16.6.1 *Adsorption Kinetics, 480*
 - 16.6.1.1 *The Saturation of Pt(111) with Hydrogen, 480*
 - 16.6.1.2 *Measurement of Sticking Probability Changes, 480*
 - 16.6.2 *Equilibrium Measurements, 481*
 - 16.6.3 *Desorption of Adsorbates, 482*
- 16.7 Thermal Annealing of Sputtering Damage (Examples), 483
- 16.7.1 *In-phase Plots During Ion Damaging at Various Temperatures, 484*
 - 16.7.2 *Antiphase Plots During Ion Damaging, 484*
 - 16.7.2.1 *Low Temperature Range, 484*
 - 16.7.2.2 *Medium Temperature Range, 484*
 - 16.7.2.3 *High Temperature Range, 485*
 - 16.7.3 *Interferometric Measurement of Sputtering Yields, 486*
- 16.8 Monitoring of Crystal Growth, 486
- 17. Reactive Scattering, 488**
M. Asscher and G. A. Somorjai
- 17.1 Introduction, 488
- 17.2 Methods, 489
- 17.2.1 *Scattering Chamber, 489*
 - 17.2.2 *Beam Sources, 493*
 - 17.2.3 *Data Analysis, 495*
- 17.3 Reactive Scattering: Effusive Beam Sources, 499
- 17.3.1 *H₂-D₂ Exchange and Recombination Reactions, 499*
 - 17.3.2 *CO Oxidation, 502*
 - 17.3.3 *Highly Reactive Beams, 503*
- 17.4 Reactive Scattering: Supersonic Beams, 505
- 17.4.1 *Activated Dissociative Adsorption and Associative Desorption, 506*
 - 17.4.2 *Complex Surface Reactions: Products Energy Distribution, 509*
 - 17.4.3 *High Energy Beams: Surface Collision-Induced Dissociation, 512*
- 17.5 Concluding Remarks, 514
- Index, 523
