Foreword	iii
Preface	iv
Resonances in Electron Impact on Atoms George J. Schulz.....	1
Resonances in Electron Impact on Diatomic Molecules George J. Schulz.....	47

CONTENTS

I. Introduction.....	1
A. Theory.....	2
B. Relationship of Theory to Experiment.....	3
C. Isoelectronic and Isostate Comparisons.....	5
D. Experimental Techniques.....	5
II. Hydrogen.....	11
A. Resonances in the Elastic Cross Sections.....	12
B. Resonances in the Inelastic Cross Sections.....	14
C. A Resonance Involving H^{-}	15
III. Helium.....	17
A. Classification of Energy Levels in He.....	18
B. Resonances from 19.3 eV to the Ionization Potential.....	20
1. 19.34 eV ($1s2s^3, ^4S$).....	20
2. 19.45 eV (?).....	21
3. 19.5-20.3 eV (?).....	21
4. 20.3-20.45 eV (2^3P).....	22
5. Effects near the Thresholds of the 2^3S and 2^1S Excitation Cross Section.....	22
6. Structure in the Elastic Cross Section near the 2^3S and 2^1S Thresholds (Wigner Cusps).....	26
7. 21.0 eV (2^3D).....	26
8. 22.42-24 eV ($3^2S, 3^2P$ etc.) Optical Excitation Functions.....	27
C. Resonances Above the Ionization Potential: ($2s^22p$) 3P and ($2s2p^2$) 3D	28
IV. Neon, Argon, Krypton, and Xenon.....	30
A. Resonances below the Ionization Potential.....	30
B. Resonances above the Ionization Potential.....	32
V. Lithium and Sodium.....	32
VI. Mercury.....	34
VII. Oxygen (O).....	35
Appendixes	
I. Resonances in H.....	37
II. Values for the $1s(2s)^2^2S$ Resonance in Helium.....	38
III. Position of Resonances below Ionization in Helium.....	38
IIIa. Larger Structures in the Optical Excitation Functions of He.....	39
IV. Position of Resonances above the Ionization Potential in He.....	39
V. Position of Resonances in Neon.....	40
VI. Position of Resonances in Argon.....	40
VII. Position of Resonances in Krypton.....	41
VIII. Position of Resonances in Xenon.....	41
IX. Suggested Resonances in Ne and Ar.....	42
X. Position of Resonances in Mercury.....	43
References.....	43

CONTENTS

I. Introduction	47
A. Classification of Compound States	50
B. Parentage of Core-Excited Feshbach Resonances	52
II. Hydrogen	53
A. Resonance at Low Energy: 0-4 eV ($^2\Sigma_u^+$)	53
1. Elastic Cross Section	53
2. Vibrational Excitation in H_2 via $^2\Sigma_u^+$	53
3. Rotational Excitation via the $^2\Sigma_u^+$ State and Angular Distributions	55
4. Dissociative Attachment at 3.75 eV	57
5. Effect of Rotational Levels of the H_2 Target Molecule of H^- Formation near 3.75 eV	59
6. Associative detachment: $H^- + H \rightarrow H_2^- \rightarrow H_2 + e$	60
B. Resonance in the 10-eV Region ($^2\Sigma_g^+$)	63
C. Core-excited Resonances in the 11-15 eV Region	64
1. Band "a"	68
2. Band "b"	69
3. Band "c"	70
4. Band "d"	70
5. Band "e"	71
6. Band "f"	71
7. Band "g"	72
III. Nitrogen	72
A. Resonance at Low Energy (1.7-4 eV) $^2\Pi_g$	72
1. Elastic Cross Section via $^2\Pi_g$	72
2. Vibrational Excitation via $^2\Pi_g$	73
3. Threshold Behavior of the Cross Section to $v=1$	81
4. Angular Distributions	81
5. Pure Rotational Excitation via $^2\Pi_g$	82
B. Core-Excited Resonances in the 11-15 eV Region	82
1. Band " b_1 "- $^2\Sigma_u^+$	82
2. Shape Resonances and Inelastic Thresholds	83
3. Structures 5 and 6	83
4. Bands "c" and "d"	81
C. Bands "a" and "a'": Core-Excited Shape Resonances	81
D. Resonances above the Ionization Potential in N_2	84
IV. Carbon Monoxide	85
A. Resonance at Low Energy (1-3 eV) $^2\Pi$	85
1. Elastic Cross Section via $^2\Pi$	85
2. Vibrational Excitation via $^2\Pi$	85
3. Angular Distributions	85
B. Dissociative Attachment (9.65-12 eV)	86
C. Core-Excited Resonances in the 10-15 eV Region	86
1. $^2\Sigma^+$ Resonances (10.04 eV, 10.28 eV)	86
2. Shape Resonances and Inelastic Thresholds	87
3. Band "a"	87
D. Resonances above the Ionization Potential in CO	87
V. Nitric Oxide, NO	88
A. Compound State at Low Energy (0-1.5 eV) $X^2\Sigma^-$	88
1. Elastic Scattering	88
2. Vibrational Excitation (0-1.4 eV)	89
3. Equilibrium Internuclear Separation and Electron Affinity: Photodetachment Spectroscopy	90
B. Dissociative Attachment (7-10 eV)	90
C. Core-Excited Resonances in NO	90
1. Bands "a" to "d"	90
2. The 12 eV-18 eV Region	91

VI. Oxygen	92
A. Compound State at Low Energy: $X^2\Pi_g$ (0-1 eV)	92
1. Elastic Scattering	92
2. Vibrational Excitation of O_2 at Low Energy (0-1.0 eV)	93
3. Potential Energy Curve for O_2^- ($X^2\Pi_g$)	95
4. Equilibrium Internuclear Separation and Electron Affinity: Photodetachment Spectroscopy	95
5. Three-Body Attachment in O_2	96
B. Dissociative Attachment (4.4-10 eV): $^2\Pi_u$ State	98
C. Core-Excited Resonances	99
1. Band "a"	99
2. Band "b"	100
VII. Conclusions	100
A. Shape Resonances	100
B. Core-Excited Shape Resonances	100
C. Binding of Rydberg Resonances	101
D. Thresholds of Inelastic Cross Sections	101
Acknowledgments	101
Appendixes	
I. Core-Excited H_2^- States	102
II. Core-Excited D_2^- States	103
III. Branching Ratios for Series "a" in H_2	103
IV. Core-Excited Resonances in N_2 (11-15 eV)	104
V. Shape Resonances Associated with $B^2\Pi_g$ and $A^2\Sigma_u^+$ States in N_2 (8-11 eV)	104
VI. Resonances in CO (10-15 eV)	105
VII. Vibrational Spacings and Franck-Condon Probabilities for Four Bands in NO^-	106
VIII. Resonances in NO and Their Grandparents (12-18 eV)	106
IX. Spacing of Vibrational States of O_2^- ($X^2\Pi_g$)	106
X. Vibrational Cross Sections and Resonance Energies in O_2^- at Low Energies	107
XI. Core-Excited Resonances in O_2	108
References	108
