- THE JET DESIGN TEAM	(iv)
- SUMMARY	(v)
- ACKNOWLEDGEMENTS	(viii)
- EDITORIAL NOTE	(ix)
I <u>JET: THE PRESENT POSITION</u>	1
1. Introduction	3
2. General Description of JET	4
3. Involvement of Industry-Contracts	5
4. Status of the Project	6
5. Costs and Planning	15
6. Staff	15
II <u>EXPERIMENTAL PROGRAMME ASPECTS</u>	31
1. Introduction	35
1.1 Recent advances in tokamak research and implications for JET	38
2. Operating Scenarios	43
2.1 Introduction	43
2.2 Full aperture scenario	47
2.3 Major radius adiabatic compression scenario	49
2.4 Expanding plasma - neutral injection	51
2.5 Fusion studies	57
2.6 Strategy for active operation in JET	59
3. Plasma Behaviour	67
3.1 Positional control in the formation phase	67
3.2 Consequences of β_p changes	81
3.3 Ionisation and initiation computations	89
3.4 MHD stability calculations	107
3.5 Consequences of non-thermal neutron	117
3.6 Impurity control	123
4. Additional Heating	139
4.1 Introduction	139
4.2 The development of neutral injection systems for JET	141
4.3 High frequency heating	151

	<u>Page</u>	
5.	Performance Predictions	175
5.1	Empirical scaling for ohmic heating	175
5.2	Radiation limits to operation in JET	183
5.3	Summary of various performance predictions for JET	193
III	<u>VACUUM VESSEL; PUMPING SYSTEM; ACTIVATION STUDIES.</u>	203
1.	General Design	207
2.	Stress Analysis and Tests	213
2.1	Static Loads	213
2.2	Buckling of the Vacuum Vessel Torus	216
2.3	Transient Loads	216
2.4	Static and Dynamic Bending Tests	217
3.	Materials	219
3a	Construction Material for the Vacuum Vessel	219
3b	Low-Z Materials	221
4.	Bake-out Procedure	225
5.	Manufacturing Contracts	229
6.	Limiters	235
7.	Pumping Systems	239
8.	Valves	243
9.	Leak Testing	247
9.1	Leak Testing of Torus and Components	247
9.2	Leak Detection Strategy for the Operation Phase	249
10.	Control System	251
11.	Tritium Handling in JET	257
12.	Neutron-Induced Activation	261
12.1	Introduction	261
12.2	Model for the Outline Design	262
12.3	Results of the Casaccia Group	265
12.4	Results of the Juelich Group	267
12.5	Conclusions	272
IV	<u>TOROIDAL FIELD COILS AND MECHANICAL STRUCTURE</u>	275
1.	Toroidal Field Coils	281
2.	Stress Analysis	289
3.	Toroidal Coil Cooling Calculation	323
4.	Mechanical Structure	329
4.1	The Electromagnetic Forces	329
4.2	Principle of the Mechanical Structure	332

	<u>Page</u>	
4.3	Description of the Structure	337
4.4	Loads and Stress Analysis	343
V	<u>THE POLOIDAL FIELD SYSTEM</u>	361
1.	Introduction	365
2.	Computation of Fields	365
3.	The Inner P.F. Coils (Coil 1)	379
4.	The Outer P.F. Coils	405
5.	The JET Transformer Core	409
6.	The Poloidal Field Power Supply	413
VI	<u>ASSEMBLY AND MAINTENANCE</u>	429
	REMOTE HANDLING	433
1.	Introduction	433
2.	The Remote Handling Programme in JET	435
3.	The Remote Handling Equipment	436
	3.1 The Handling Units	436
	3.2 Viewing System	437
	3.3 Articulated Supports for the Servomanipulators	437
	3.4 Crane - bridges	438
	3.5 Hot Cell	439
	3.6 Auxiliary equipment requirements	440
4.	The Experimental Programme	441
5.	Replacement of an Octant of the Toroidal System	443
	A REMOVAL OF AN OCTANT	444
	A1 Parking of Nos 3 and 4 Poloidal Field Coils	444
	A2 Removal of Neutral Injectors and Port Covers as one unit	444
	A3 Disconnection of Instrumentation and Diagnostics	444
	A4 Disconnection of Toroidal Field Coils	445
	A5 Separation of Vacuum Vessel Joints	445
	A6 Breaking of Structure Joints	445
	A7 Insertion of Sliding Equipment	445
	A8 Withdrawal of the Octant	446
	A9 Transport and Storage of the Octant	446
5.1.	Time Scale of Octant Replacement	446

	<u>Page</u>
VII	<u>PROGRESS REPORT ON JET POWER SUPPLIES</u> 465
1.	Introduction 469
2.	The JET Loads 470
2.1	Toroidal Magnetic Field Coils (Load No.1) 471
2.2	Poloidal Magnetic Field Coils (Load No.2) 472
2.3	The Poloidal Magnetic Field Amplifiers (Load No.3) 473
2.4	The Additional Heating (Load No.4) 473
2.5	The overall power pulse 474
3.	The Site H.V. Line 479
3.1	Pulse power loading of a power system 479
3.2	The H.V. line main parameters 481
4.	Power Supply Equipment Cost Analysis 483
5.	The JET P.S. Scheme 493
6.	(FGC) System Specification 501
A1.	Main Power Supply Component 507
A2.	Additional Heating power supply and protection 512
A3.	Overall (TCC) System performance studies 516
VIII	<u>CONTROL AND DATA ACQUISITION SYSTEM</u> 533
1.	Objectives and main design features 536
2.	System organization 539
2.1	Hierarchical structure 539
2.2	Supervisory level 541
2.3	Subsystem level 543
2.4	Local unit level 545
2.5	JET machine states 545
2.6	Subsystems 549
3.	Man-machine interface 553
3.1	Introduction 553
3.2	Control area 554
3.3	Operator's section 556
3.4	Experimentalist's section 559
3.5	Connections to computers 562
3.6	Degraded performance operation 563

	<u>Page</u>
4. Communication	567
4.1 Introduction	567
4.2 Computer to computer communications	569
4.3 Timing and interlocks	572
5. Computers	575
5.1 Introduction	575
5.2 Hardware configurations	576
5.3 Software requirements	578
6. Standardization	581
6.1 Introduction	581
6.2 Data acquisition	583
6.3 Timing	585
6.4 Configurations for data acquisition	586
6.5 Control, Monitoring and interlock	589
6.6 Instrumentation	591
7. Subsystem control	595
7.1 The Toroidal Field subsystem	595
7.2 The Poloidal Field subsystem	599
7.3 The Vacuum Subsystem	603
7.4 General Services and other Subsystems	604
IX <u>SITE AND BUILDINGS</u>	609
1. Site Layout	612
1.1 Major Services Installations	613
1.2 Support Accommodation	613
1.3 Specific Buildings and Associated Services	614
2. JET Specific Buildings	614
2.1 Main Complex	614
2.2 Generator Hall	623
2.3 Power Supplies Compound	623
3. Construction Programme	624
4. Study Contracts	624
<u>List of Symbols and Definitions</u>	633
<u>List of Contracts</u>	643
<u>Euratom Associated Laboratories</u>	660
