<b>SURVEY</b>	<b>1</b>
<b>CHAPTER 1 Stiff differential equations</b> <span style="float: right;">5</span>	
1.1	Stiffness <span style="float: right;">5</span>
1.2	The one-sided Lipschitz condition <span style="float: right;">15</span>
1.3	Dissipativity <span style="float: right;">17</span>
1.4	The linear model system <span style="float: right;">17</span>
1.5	The logarithmic matrix norm <span style="float: right;">27</span>
1.6	Remarks <span style="float: right;">34</span>
<b>CHAPTER 2 Contractivity and stability</b> <span style="float: right;">37</span>	
2.1	Some definitions on contractivity and stability <span style="float: right;">37</span>
2.2	Absolute stability <span style="float: right;">40</span>
2.3	Unconditional contractivity for the linear model system <span style="float: right;">43</span>
2.4	A specific property of implicit Euler <span style="float: right;">46</span>
2.5	The à priori global error bound <span style="float: right;">48</span>
2.6	An instructive example <span style="float: right;">51</span>
<b>CHAPTER 3 Runge-Kutta methods</b> <span style="float: right;">55</span>	
3.1	The general structure of a Runge-Kutta formula <span style="float: right;">55</span>
3.2	The simplifying conditions <span style="float: right;">57</span>
3.3	Methods based on high order quadrature <span style="float: right;">62</span>
3.4	The stability function <span style="float: right;">71</span>
3.5	Diagonally and singly-implicit methods <span style="float: right;">75</span>
3.6	The W-transformation <span style="float: right;">83</span>
3.7	The direct product of matrices <span style="float: right;">93</span>
<b>CHAPTER 4 Contractivity of Runge-Kutta methods</b> <span style="float: right;">97</span>	
4.1	B-stability <span style="float: right;">97</span>
4.2	Algebraic stability <span style="float: right;">102</span>
4.3	Relations between various stability properties <span style="float: right;">104</span>
4.4	Reducibility <span style="float: right;">107</span>
4.5	Reducibility and stability <span style="float: right;">114</span>
4.6	Algebraically stable methods <span style="float: right;">117</span>

<b>CHAPTER 5 Solution of the algebraic equations in Runge-Kutta schemes</b>	<b>131</b>
5.1 Notational conventions	132
5.2 Existence and uniqueness for the linear model system	136
5.3 Existence and uniqueness for nonlinear problems	143
5.4 BSI-stability	151
5.5 BSI-stability of Gauss-Legendre methods	155
5.6 BSI-stability of Radau IA-methods	158
5.7 BSI-stability of Radau IIA-methods	162
5.8 BSI-stability of Lobatto IIIA- and IIIB-methods	164
5.9 BSI-stability of Lobatto IIIC-methods	169
5.10 BSI-stability of diagonally and singly-implicit methods	172
5.11 Generalizations of B-stability	177
5.12 Implementation of implicit Runge-Kutta methods	180
<b>CHAPTER 6 Contractivity of explicit methods</b>	<b>185</b>
6.1 The model class	185
6.2 The concept of circle contractivity	187
6.3 Examples of circle contractive methods	191
<b>CHAPTER 7 The concept of B-convergence</b>	<b>195</b>
7.1 The model problem of Prothero and Robinson	196
7.2 B-consistency and B-convergence	199
7.3 Sufficient conditions for B-consistency	204
7.4 Sufficient conditions for B-convergence	209
7.5 A numerical illustration	212
7.6 Remarks	216
<b>CHAPTER 8 The concept of D-stability</b>	<b>219</b>
8.1 The definition of D-stability	219
8.2 The problem class $\mathcal{S}$	220
8.3 D-stability of implicit Euler	225
8.4 On D-stability and stepwise stability	227
<b>CHAPTER 9 Runge-Kutta Rosenbrock methods</b>	<b>231</b>
9.1 The variation of constants formula	232
9.2 Stability of the variation of constants formula	234
9.3 Results on D-stability	237

9.4	On the stability of implemented Runge-Kutta schemes	245
9.5	D-stability and the autonomous form	249
9.6	Some remarks on B-consistency and B-convergence	251
9.7	A numerical illustration	252
<b>CHAPTER 10 Applications to partial differential equations</b>		255
10.1	The method of lines	255
10.2	Review of some stability concepts for semi-discrete problems	257
10.3	Review of some stability concepts for integration formulas	261
10.4	A pseudo-linear parabolic problem	269
10.5	The hyperbolic model problem	272
10.6	Diffusion-convection problems	275
10.7	The shallow water equations: conservative space differencing	277
10.8	The shallow water equations: conservative time integration	286
