

CONTENTS

1. THE ROLE OF MAGNETIC FIELDS	1
References	7
2. THE NATURE OF MAGNETIC FIELDS	11
References	20
3. ELECTRIC AND MAGNETIC FIELDS	22
References	28
4. THE BASIC EQUATIONS	30
4.1. The reduction of Maxwell's equations	30
4.2. Physical interpretation of the hydromagnetic equation	32
4.3. Mathematical solutions for field convection	38
4.4. Mathematical solution of the complete hydromagnetic equations	42
4.5. Resistive diffusion and magnetic lines of force	42
4.6. The electric current and the electric field	43
4.7. The charge density and the electric field	46
References	48
5. MAGNETIC FIELD STRESS AND ENERGY	50
5.1. Magnetic field stresses	50
5.2. Magnetic field energy	54
5.3. Global properties of magnetic stress	56
5.4. Magnetic stress in one and two dimensions	59
References	62
6. MAGNETIC EQUILIBRIUM	63
6.1. The problem of equilibrium	63
6.2. Magnetic fields in infinite spaces	64
6.3. The twisted rope of magnetic field	67
6.4. The axi-symmetric magnetic field	69
6.5. The axi-symmetric field in a finite volume	73
6.6. The magnetic field extending from a fixed surface	76
6.6.1. Physical problems suggested by the sun	76
6.6.2. Physical problems suggested by the planets and pulsars	81
6.7. Formal mathematical treatment of extended magnetic fields	84
6.7.1. General remarks	84
6.7.2. Force-free magnetic fields	84
6.7.3. Magnetic fields subject to pressure	87
6.8. Diffusion of an equilibrium configuration	90
6.9. Laboratory fields and plasmas	95
References	96

7. PROPAGATION OF DISTURBANCES	101
7.1. General discussion	101
7.2. Disturbances in an ideal magnetic fluid	101
7.3. Alfvén waves in an ideal fluid	105
7.4. Hydromagnetic waves, a compressible medium	107
7.5. Energy transport by hydromagnetic waves	111
7.6. Dissipation of hydromagnetic waves in a fluid	114
7.7. Dissipation of hydromagnetic waves in a collisionless plasma	118
References	121
8. THE ISOLATED FLUX TUBE	123
8.1. Basic physical properties	123
8.2. A flux tube in thermal equilibrium with its surroundings	127
8.3. Flux tube with cooled interior	127
8.4. Flux tube without confining pressures	129
8.5. Stability of a magnetic flux tube	130
8.6. The equilibrium path of a flux tube in an atmosphere	136
8.7. Rate of rise of magnetic field in thermal equilibrium	141
8.8. Rate of rise of magnetic field in a stable atmosphere	147
8.9. The mutual attraction of rising flux tubes	151
8.9.1. The problem posed by observations	151
8.9.2. Transverse attraction of rising tubes	152
8.9.3. The longitudinal attraction of rising tubes	159
8.10. Transverse oscillation	161
8.11. Summary	164
References	166
9. THE TWISTED FLUX TUBE	167
9.1. Basic properties of a twisted tube	167
9.2. Total tension and stability of a flux rope	172
9.3. Dilatation and stretching of a flux rope	175
9.4. An example of dilatation and stretching	177
9.4.1. Compression of the flux tube	179
9.4.2. Expansion of the flux tube	181
9.4.3. Invariant field configuration	181
9.5. Variation of radius along the tube	183
9.5.1. Extreme compression of the flux tube	185
9.5.2. Extreme expansion of the flux tube	186
9.5.3. Invariant field configuration	192
9.6. Vertical extension of a flux rope	194
9.7. An idealized example of a vertical flux rope	198
9.8. Flattening of a rising flux tube	200
9.9. Summary	204
References	205
10. THE ISOLATION AND CONCENTRATION OF MAGNETIC FLUX TUBES	207
10.1. The appearance of isolated flux tubes in nature	207
10.2. The concentration of magnetic field in converging flows	214

10.3.	A magnetic flux tube in a turbulent fluid	218
10.4.	The Bernoulli effect within a flux tube	220
10.5.	Turbulent pumping of a flux tube	227
10.6.	Fluid motion within a flux tube: incompressible case	233
10.7.	Field compression with convective forces: incompressible case	237
10.8.	Fluid motion within a flux tube: stratified atmosphere	240
10.9.	The limits on field compression in a stratified atmosphere	249
10.10.	Reduced temperatures and field concentration	254
10.10.1.	General ideas and possibilities	254
10.10.2.	Magnetic inhibition of heat flow and the concentration of fields	257
10.11.	The superadiabatic effect	260
10.11.1.	General conditions within a vertical flux tube	260
10.11.2.	Heat transport and adiabatic cooling	262
10.11.3.	Conditions beneath the surface of the sun	265
10.11.4.	Discussion	266
	References	271
11.	THE TOPOLOGY OF MAGNETIC LINES OF FORCE	274
11.1.	General properties of lines of force	274
11.2.	Stochastic properties of lines of force	279
11.3.	The random component of magnetic fields	284
11.3.1.	Local random components	285
11.3.2.	Random component in turbulence	286
11.3.3.	Random component in inhomogeneous resistivity	290
11.4.	An illustration of random walk	294
	References	297
12.	NON-EQUILIBRIUM OF INVARIANT FIELDS	298
12.1.	General remarks on non-equilibrium	298
12.2.	Equilibrium of an axi-symmetric azimuthal field	300
12.3.	Non-equilibrium in a finite volume	301
12.4.	Non-equilibrium in the presence of thermal expansion	307
	References	313
13.	THE BREAKUP AND ESCAPE OF SUBMERGED MAGNETIC FIELDS	314
13.1.	Unstable effects of magnetic buoyancy	314
13.2.	Breakup of the sharp upper boundary of a submerged field	316
13.3.	Breakup of diffuse upper boundary of a submerged field	320
13.4.	Breakup throughout a submerged field	325
13.5.	Equilibrium of a non-uniform atmosphere and field	333
13.6.	Enhanced diffusion	340
13.7.	Dynamical escape of magnetic flux	341
13.7.1.	Break-up of confining fluid sheet	343
13.7.2.	Equilibrium configuration	344
13.7.3.	Energy decrease	346
13.7.4.	Further evolution of the field	347

13.8. Effects of cosmic rays	352
13.9. Summary	356
References	357
14. NON-EQUILIBRIUM IN FIELD TOPOLOGIES LACKING INVARIANCE	359
14.1. General remarks on field topology and non-equilibrium	359
14.2. Fields in the neighbourhood of invariant topologies	363
14.3. Equilibrium in the neighbourhood of $B_z(x, y)$	368
14.4. Coordinates and equations for the general field invariant to translation	370
14.5. Equilibrium in the neighbourhood of a force-free field	372
14.6. Equilibrium in the neighbourhood of the general invariant field	374
14.7. Discussion of equilibrium and non-equilibrium	378
14.8. Dynamical non-equilibrium in field topologies without invariance	383
References	391
15. RAPID RECONNECTION OF MAGNETIC LINES OF FORCE	392
15.1. The general nature of rapid reconnection	396
15.2. Kinematical considerations	400
15.3. The effects of diffusion at the stagnation point	409
15.4. The general effect of diffusion	413
15.5. Discontinuous velocity fields and diffusion	417
15.6. Petschek's dynamical considerations	423
15.7. Sonnerup's dynamical solution	428
15.8. Instability and enhanced reconnection of fields	437
References
