Preface	v
1 Nonlinear Oscillations	1
1.1 Harmonic Generation in Small Amplitude Oscillations	2
1.2 Amplitude Dispersion from Secular Terms	6
1.3 Parametric Instabilities	7
1.3.1 Parametric instability threshold and the growth rate	9
1.3.2 Mathieu equation and Floquet theory	10
1.4 <i>Example 1.1 Parametric Excitation of the Pendulum</i>	13
1.5 <i>Example 1.2 Stability of the Ponderomotive Potential</i>	15
1.6 <i>Example 1.3 Oscillations of a Charged Particle in Two Longitudinal Waves</i>	18
2 Hamiltonian Dynamics	23
2.1 Measure-Preserving Flows and the Hamiltonian	23
2.2 Poincaré Surface of Section	25
2.3 Fixed Points and Invariant Curves	26
2.4 KAM Theory	27
2.5 KAM Torii, the Golden Mean and Leaky Barriers	28
2.6 KAM Theory in Laboratory Plasmas	31
2.7 Visualization of the Magnetic Flux Surfaces by Electron Beam Mapping	31
2.8 Magnetic Islands and the Unstable-Chaotic Trajectories of Field Lines in Tokamaks	36
2.9 Measure of the Resonant Rational Surfaces	44
2.9.1 The number of irreducible fractions	44
2.9.2 Measure of the resonant surfaces	45
2.10 <i>Example 2.1 How a Swing Behaves</i>	47
2.11 Invariant Tori and the KAM Theorem	48
3 Stochasticity Theory and Applications in Plasmas	51
3.1 Trajectories in Straight, Nonuniform Magnetic Fields	53

3.1.1	Integrable orbits and invariants of charged particle motion	54	4.4.3	Standard map at large values of A	131
3.1.2	Nonlinear oscillator for weakly inhomogeneous magnetic field	59	4.4.4	Standard map at small values of A	134
3.1.3	Nonlinear orbits in the field reversed configuration or sheet pinch	60	4.4.5	Discussion of physics for the diffusion in the standard map .	134
3.2	Adiabatic Invariants	62	4.5	Regular Motion in the Relativistic Standard Map	136
3.2.1	Small gyroradius limit ($2mE_{\perp} \ll p_y^2$)	63	4.6	Symmetries of the Relativistic Standard Map	140
3.2.2	Small gyroradius and a weak electrostatic potential	64	4.7	Stability of the Periodic Orbits	145
3.2.3	Current sheet invariant	65	4.8	Poincaré-Birkhoff Multifurcation for the Period-4 Orbit	155
3.3	Onset of Chaos from a Transverse Electric Field	69	4.9	Concluding Remarks on the Standard and Relativistic Maps	160
3.3.1	$1\frac{1}{2}$ -D Hamiltonian	70	4.10	<i>Example 4.1 Fermi Acceleration</i>	161
3.3.2	Melnikov-Arnold integral	71			
3.3.3	The Whisker map and the standard map	72			
3.3.4	The standard map	73			
3.4	Onset of Chaos from a Normal Magnetic Field Component	74	5 Solitons in Plasmas		165
3.4.1	2D nonlinear coupled oscillations	75	5.1	Nonlinear Coherent Modes in Vlasov Plasmas	166
3.4.2	Two degrees-of-freedom and degeneracy	77	5.2	Amplitude Modulation of Nearly Monochromatic Waves and the Modulational Instability	169
3.4.3	Resonance conditions and the surface of section	78	5.3	Modulational Instability and Nonlinear Landau Damping	178
3.5	$\mathbf{E} \times \mathbf{B}$ Motion in Two Low-Frequency Waves and the Diffusion Approximation	84	5.3.1	NLS solitons with nonlinear Landau damping	180
3.5.1	Test particle motion in drift waves	85	5.4	Reductive Perturbation Analysis of Nonlinear Wave Propagation	183
3.5.2	Action-angle variables for $\mathbf{E} \times \mathbf{B}$ motion	87	5.4.1	Nonlinear ion acoustic wave	183
3.5.3	The onset of stochasticity in two drift waves	91	5.4.2	Parallel propagating right and left polarized Alfvén waves	187
3.5.4	<i>Example 3.1: $\mathbf{E} \times \mathbf{B}$ drift islands in the cylindrical plasma with sheared flow</i>	96	5.4.3	General nonlinear equation for oblique waves	188
3.5.5	The diffusion approximation	99	5.5	Birth of the Soliton	190
3.5.6	<i>Example 3.2: Onset of $\mathbf{E} \times \mathbf{B}$ diffusion from two equal amplitude waves</i>	100	5.6	The Inverse Scattering Transformation Method	191
3.6	Renormalized $\mathbf{E} \times \mathbf{B}$ Diffusion Coefficients	102	5.7	Gelfand-Levitian Equation for the Scattering Potential	194
3.7	$\mathbf{E} \times \mathbf{B}$ Motion in a Sheared Magnetic Shear	107	5.8	Inverse Scattering Transform (IST) for the NLS Equation	196
3.8	Hamilton's Equations of Motion in Non-Canonical Coordinates	109	5.9	Generalization of the Integrability Conditions	198
4 Phase Space Structures in Hamiltonian Systems		117	5.10	Alfvén Soliton	201
4.1	The Standard Map	117	5.11	One-Dimensional Soliton Gas Models	206
4.2	Maps for the Motion of a Charged Particle in an Infinite Spectrum of Longitudinal Waves	120	5.12	<i>Example 5.1 — Elastic Collisions of Two Solitons</i>	206
4.3	Fixed Points, Accelerator Orbits and the Tangent Map	122	5.12.1	Petviashvili drift wave solitons and the soliton gas	209
4.4	Stochastic Motion and the Diffusion Coefficient	125	5.13	<i>Example 5.2 — 3 × 3 Matrix Formalism of the Inverse Scattering Transformation</i>	219
4.4.1	Probability distribution functions for the orbits	126			
4.4.2	Evolution of the momentum distribution function	131			
			6 Vortex Structures in Hydrodynamic and Vlasov Systems		223
6.1	The Drift Wave–Rossby Wave Analogy	223	6.2	The Drift Wave Mechanism and Vortex	228
6.2	Drift Wave Mechanism and Vortex	228	6.2.1	Nonlinear drift wave equation and passive scalar equation	230
6.2.1	Nonlinear drift wave equation and passive scalar equation	230	6.2.2	Conservation laws	231
6.2.2	Conservation laws	231	6.2.3	Solitary monopolar structures and the trapping condition	234
6.3	Solitary Dipolar Vortex Solutions	235	6.3	Solitary Dipolar Vortex Solutions	235
6.4	Drift Wave-Ion Acoustic Wave Equations	236	6.4	Drift Wave-Ion Acoustic Wave Equations	236
6.4.1	Conditions for the conservation of energy and enstrophy	239	6.4.1	Conditions for the conservation of energy and enstrophy	239

6.4.2	Ertel's conservation theorem	240	7.5	Low-Order Wave Coupling	308
6.4.3	Solitary drift wave vortices: shearless case	240	7.5.1	Three-wave coupling and strange attractors	308
6.4.4	Larichev-Reznik dipole vortices	242	7.5.2	Integrable limit of the three-wave equations	311
6.4.5	Maximum amplitude and size relations	243	7.5.3	Dissipative dynamics and the strange attractor	312
6.4.6	Energy and enstrophy of the dipole vortex	244	7.5.4	Random phase approximation	314
6.5	Experimental Features and Computer Simulations of the Dipole Vortices	246		Bibliography	321
6.5.1	Plasma drift wave experiments	246		Index	335
6.5.2	Drift wave vortex collisions and coalescence	248			
6.5.3	Anomalous transport during inelastic vortex collisions	257			
6.6	Intermittent Transport from Vortex Collisions	260			
6.7	Interaction Energies and Kurtosis in Distributions of Vortices and Waves	263			
6.8	Fluctuation Spectrum from a Gas of Dipole Vortices	266			
6.9	Monopolar Vortices Produced by Sheared Flows	268			
6.9.1	Monopole solutions due to the combined action of the Poisson bracket and KdV nonlinearities	268			
6.9.2	Dipole vortex splitting into monopoles	272			
6.10	Discussion and Conclusions	275			
7	Statistical Properties and Correlation Functions for Drift Waves	277			
7.1	Introductory Remarks	277			
7.2	Nonlinear Drift Wave Equation	280			
7.2.1	Nonlinear drift wave equation in configuration space	281			
7.2.2	Nonlinear drift wave equation in \mathbf{k} space	284			
7.2.3	Volume contraction in the phase space	285			
7.2.4	Statistical turbulence theory	288			
7.2.5	Two-time correlation functions	293			
7.2.6	Properties of correlation functions for $\mathbf{k}_1 + \mathbf{k}_2 = 0$	294			
7.2.7	Space correlation function and the wavenumber spectrum	295			
7.2.8	Effect of dissipation on space-time evolution	296			
7.3	Renormalized, Markovianized Spectral Equations	297			
7.3.1	Incoherent fluctuation source	299			
7.3.2	Dynamics of the correlation function in renormalized turbulence theory	299			
7.3.3	Properties of $T_{\mathbf{k}}(\{E\})$ — the nonlinear transfer operator	300			
7.4	Local, Isotropic Approximation	301			
7.4.1	High-wavenumber spectral balance	303			
7.4.2	Quasilinear transport from the renormalized turbulence theory spectrum	305			
7.4.3	Relation to the Hasegawa-Wakatani drift-wave equation	306
