

TOTAL CROSS-SECTION MEASUREMENTS

G. GIACOMELLI

CERN, Geneva, University of Bologna and INFN, Bologna

Contents

1. INTRODUCTION	78
2. EXPERIMENTAL METHODS	81
2.1. The transmission method for charged particles	82
2.1.1. Principle of a transmission measurement	82
2.1.2. The beam	87
2.1.3. The counters	87
2.1.4. The electronics	91
2.1.5. The targets	92
2.1.6. Experimental procedure	94
2.1.7. Corrections	95
2.2. Bubble chamber measurements for charged particles	100
2.3. Measurements of total cross-sections of neutral particles	100
2.3.1. Neutrons	101
2.3.2. Absorption coefficients for photons	102
2.4. Other methods	103
3. THE COMPUTATION OF THE PURE ISOSPIN CROSS-SECTIONS. THE DEUTERON PROBLEM	104
3.1. The pure isospin cross-sections	104
3.2. The shadow effect	105
3.3. The Fermi motion	106
4. ANALYSIS OF THE EXPERIMENTAL ERRORS	110
5. ANALYSIS OF THE TOTAL CROSS-SECTION DATA	114
5.1. The pion-nucleon system	119
5.2. The K^- -nucleon system	122
5.3. The K^+ -nucleon system	124
5.4. The nucleon-nucleon system	135

5.5. The ΛN and ΣN systems	139
5.6. The antinucleon–nucleon system	139
5.7. Comparison of the high-energy behaviours	143
5.8. Dispersion relations	151
5.9. Absorption cross-sections off nuclei	155
6. CONCLUDING REMARKS	160
ACKNOWLEDGEMENTS	162
REFERENCES	163
APPENDIX A: Interpolated values of total cross-sections	166
APPENDIX B: A listing of all measured total cross-sections	167
