

Table of Contents

Preface to the Russian Edition	iii
Foreword to the English Edition	v
CHAPTER 1 THERMIONIC CONVERTERS AND LOW-TEMPERATURE PLASMA	1
1. Methods of Direct Conversion of Thermal to Electrical Energy	1
2. The Efficiency of Direct Conversion of Thermal to Elec- trical Energy	4
3. The Main Operating Modes of Thermionic Converters(TICs) . .	5
4. The Efficiency and Power Density of a TIC	8
5. Requirements for Electrode Materials and TIC Designs . . .	10
6. Prospects for Using TICs	12
7. The Plasma in a TIC	13
References	18
CHAPTER 2 EMISSION AND ADSORPTION PROCESSES (TIC ELECTRODES) . . .	19
1. Thermionic Emission	19
2. Thermal Effects During Thermionic Emission	23
3. The Contact Potential Difference	24
4. Thermionic Emission in an Accelerating Field	25
5. Evaporation	27
6. Surface Energy	29
7. Adsorption and Its Effect on the Work Function	30
8. Surface Ionization	33
9. Adsorption of Cesium on Refractory Metals	34
10. Electropositive Additives in TICs	39
11. Electronegative Additives in TICs	42
12. The Vacuum Mode of TIC Operation	47
References	52
CHAPTER 3 ELEMENTARY PROCESSES IN A PLASMA	55
1. Elastic Collisions	55
2. Coulomb Collisions	57
3. Elastic Electron-Atom Collisions	59
4. Ion-Atom Collisions	60
5. Inelastic Electron-Atom Collisions	61
6. Classification of the Levels in the Atoms of Alkali Metals	66
7. Radiation and Absorption of Light	69
8. Spectral Broadening	73
References	78
CHAPTER 4 KINETIC PHENOMENA IN THE PLASMA	81
1. The Kinetic Equation	81
2. Solution of the Kinetic Equation in the Relaxation Time Approximation	84
3. Transport Equations and Kinetic Coefficients in the Relax- ation Time Approximation. Electron Current and Electron Energy Flux in a Weakly Ionized Plasma	87

4. The Effect of a Magnetic Field on Transport Phenomenon . .	91
5. The Effect of Interelectrode Collisions and Ion Scattering on the Kinetic Coefficients for Electrons	95
6. Exchange of Energy and Momentum Between Electrons and the Heavy Components of a Plasma	104
7. The Kinetic Coefficients for Ions in a Weakly Ionized Plasma	111
References	117
CHAPTER 5 IONIZATION AND RECOMBINATION IN A LOW-TEMPERATURE PLASMA	119
1. A Plasma in Thermodynamic Equilibrium	119
2. Ionization and Recombination in a Plasma	123
3. Calculating the Rate of Ionization-Recombination by Solving the Equations of Particle Balance for the Excited Levels. Ionization in a Cesium Plasma	134
4. Calculating the Radiation from the Plasma. The Effect of Radiation on the Rate of Ionization-Recombination in an Optically Dense Plasma. The Diffusion of Excited Atoms . . .	142
5. The Effect of Inelastic Processes on the Free-Electron Distribution Function	149
References	163
CHAPTER 6 PRE-ELECTRODE PHENOMENA IN A TIC PLASMA	167
1. The Pre-Electrode Sheaths for a Plasma in Thermodynamic Equilibrium	167
2. Ion Flow from a Plasma and the Potential Distribution in the Pre-Electrode Sheath with Negative Voltage on the Electrode	170
3. Electron Flow at the Contact of the Plasma with a Negatively Biased Electrode	181
4. Cathode Beam Relaxation in the Pre-Electrode Sheath of a Weakly Ionized Plasma	193
5. The Effect of a Non-Equilibrium Electron Distribution Function on the Rate of Atomic Ionization in the Pre-Electrode Sheath	202
6. Electron Flow From the Plasma and Potential Distribution With a Positive Potential Applied to the Electrode	204
7. Approximate Boundary Conditions for the Transport Equations in a TIC	208
References	217
CHAPTER 7 EXPERIMENTAL METHODS FOR INVESTIGATING LOW-TEMPERATURE PLASMAS	221
1. Probe Diagnostics of Plasmas	221
2. The Use of Probes in TICs	239
3. Optical Methods for Determining the Plasma Parameters of a TIC	245
4. Comparison of the Probe and Spectral Methods	255
5. Design of Experimental Devices. Boundary Effects	259
References	263

CHAPTER 8 THE DIFFUSION MODE OF THERMIONIC CONVERTERS	267
1. The Theory of the Diffusion Mode	267
2. The Characteristics and Properties of a Diffusion Plasmas	279
3. The Effect of Magnetic Fields on the Diffusion Mode . . .	287
References	292
CHAPTER 9 THE LOW-VOLTAGE ARC IN A TIC	293
1. The Main Equations Which Describe the State of the Arc Plasma of a TIC	293
2. Boundary Conditions	296
3. Methods for Calculating the State of the Plasma and the Current-Voltage Characteristic	304
4. Local Thermodynamic Equilibrium	307
5. Deviation of the Electron Distribution Function Near the Cathode from a Maxwellian Distribution. Non-Equilibrium Ionization	317
6. Characteristics of the Low-Voltage Arc in a TIC	321
7. Transition from a Diffusion to an Arc Mode	326
8. The Mode With Cathode Emission Limited by Space Charge (The Virtual Cathode)	333
9. The Increase of Current in the Developed Arc	336
10. The Effect of External Parameters on the Arc Mode	339
11. The Arc Mode With a Strongly Ionized Plasma	347
12. Variation of Atom and Ion Flow to the Cathode in the Arc Mode	357
13. The Effect of Inert Gases on the Current-Voltage Characteristics	360
14. The Effect of Magnetic Field on TIC Operation in the Arc Mode	365
15. Transient Processes in the TIC Arc Mode	366
References	373
CHAPTER 10 THE DIRECT-FLIGHT (KNUDSEN) MODE OF TIC OPERATION . . .	377
1. The Knudsen Mode TIC Operation with a Monotonic Potential Distribution in the Gap	378
2. The Knudsen Mode of TIC Operation with a Non-Monotonic Potential Distribution in the Gap	384
3. Experimental Investigation of a Knudsen Plasma in a TIC . .	399
4. The Effect of a Magnetic Field on TIC Operation in the Direct-Flight Mode	403
5. The Knudsen Arc	408
References	419
CHAPTER 11 SOME ENGINEERING PROBLEMS OF TICS	423
1. Current-Voltage Characteristics	423
2. Prospects for Increasing TIC Output Parameters	426
3. The Reactor Converter	428
4. Use of Heat Pipes	436
5. Materials for a Reactor TIC	439
6. Reactor Tests for TICs	440
7. TICs With Isotopic Heat Sources	445

8. The Use of the TIC in Central Power Plant Engineering . . .	449
References	450

APPENDICES

1. Some Physical Constants	453
2. Correlation of Some Physical Quantities for a Cesium Plasma	454
3. Some Emission Parameters	455
4. Temperature Dependence of Thermionic Emission at Different Emitter Work Functions	456
5. Temperature Dependence of Equilibrium Electron Density at Different Cesium Vapor Pressures	457
6. Temperature Dependence of Chemical Potential at Different Cesium Vapor Pressures	458
