

CONTENTS

CHAPTER I. BASIC EXAMPLES

Introduction	1
Examples (population dynamics)	2

CHAPTER II. LOCAL CONTINUATION METHODS

Introduction	17
Fundamental Theorem of Calculus	19
Implicit Function Theorem	19
Approximate Implicit Function Theorem	26
Other Local Root Finders	29
Newton-Kantorovich Theorem	31
Newton Convergence Theorem	32
Predictor-Solver Methods	34

CHAPTER III. GLOBAL CONTINUATION THEORY

Introduction	41
Sard's Theorem	42
Examples	43
Solution Sets for Regular Values	45
Degree Theory	48
Theorem (Homotopy Invariance of the Degree)	52
Brouwer Fixed Point Theorem	56
Periodic Solution Theorem	59
Theorem (Bifurcation Test)	60
Global Homotopies and Newton's Method	63

CHAPTER IV.	<u>PRACTICAL PROCEDURES IN COMPUTING PATHS</u>	
	Introduction	71
	Pseudoarclength Continuation	74
	Bordering Algorithm	77
CHAPTER V.	<u>SINGULAR POINTS AND BIFURCATION</u>	
	Introduction	88
	Bifurcation Theorem	94
	Continuation Past Singular Points	99
	Properties at Folds and Bifurcation Points on Paths	102
	Exchange of Stability	106
	Switching Branches at Bifurcation Points	108
	Multi Parameter Problems (Fold Following)	115
	Paths of Periodic Solutions and Hopf Bifurcation	121
CHAPTER VI.	<u>NUMERICAL EXAMPLES</u>	
	Introduction	129
	Problems and Difference Schemes	130
	Algorithm and Tests	137
	Numerical Examples	139
	REFERENCES	152
