ABSTRACT	iii
TABLE OF CONTENTS.	vii
LIST OF TABLES	xii
LIST OF FIGURES.	xiv
LIST OF SYMBOLS.	xxi
1. INTRODUCTION	1
1.1 <i>Motivation and Approach.</i>	1
1.2 <i>Chapter Contents</i>	3
2. PROPERTIES OF THE MESOSPHERE AND LOWER THERMOSPHERE.	6
2.1 <i>Properties of the Neutral Atmosphere</i>	6
2.2 <i>Observations of Winds and Turbulence</i>	7
2.3 <i>Summary.</i>	11
3. PROPERTIES OF THE D-REGION IONIZATION.	12
3.1 <i>Introduction</i>	12
3.2 <i>Weakly Ionized Nature of the D Region</i>	13
3.3 <i>Sources of Ionization</i>	14
3.4 <i>D-Region Electron Concentration.</i>	16
3.5 <i>D-Region Ion Composition</i>	21
3.6 <i>Electron and Ion Temperatures in the D Region.</i>	24
3.7 <i>Electron Collision Processes in the D Region</i>	24
3.8 <i>Ion Collision Processes in the D Region.</i>	27
3.9 <i>Summary.</i>	29
4. D-REGION PLASMA TRANSPORT PHENOMENA.	30
4.1 <i>Introduction</i>	30

4.2	<i>The Continuum Equations.</i>	33
4.3	<i>Electron Collision Frequencies Used in the Continuum Equations for a Weakly Ionized Ionospheric Plasma.</i>	35
4.4	<i>Ion-neutral Collision Frequencies for the Use in the Continuum Momentum Equation.</i>	47
4.5	<i>Fluid Momentum Transfer by Production and Loss Processes</i>	50
4.6	<i>The Continuum Equations for a Uniform Magnetic Field and a Turbulent Velocity Field</i>	52
4.7	<i>Specialization to the Quasi-Neutral Approximation for One Species of Ion and a Magnetic Field.</i>	57
4.8	<i>Invalidity of the Congruence Assumption in the Presence of a Magnetic Field.</i>	59
4.9	<i>Conditions for the Elimination of the Electrostatic Potential in the Linear Approximation.</i>	61
4.10	<i>Equations for the Electron Concentration Perturbation in the Linearized Quasi-Neutral Approximation</i>	64
4.11	<i>Ambipolar Diffusion in the Presence of a Magnetic Field Applied to Turbulence in the D Region.</i>	69
4.12	<i>Acceleration Effects on Ionization Inhomogeneities</i>	76
4.13	<i>Effects of a Uniform Wind on Ionization Inhomogeneities.</i>	80
4.14	<i>Production of Plasma Inhomogeneities by Turbulence and the Magnetic Field</i>	89
4.15	<i>Effects on Ion Concentrations of the Coupling of the Flux Velocities with the Spatial Derivatives of the Velocity Field.</i>	99
4.16	<i>Particle Fluxes for Ambipolar Diffusion in a Weakly Ionized Multiconstituent Plasma.</i>	104

4.17	<i>Quasi-Neutral Multiconstituent Ambipolar Diffusion</i>	109
4.18	<i>Non-Neutral Ambipolar Diffusion</i>	121
4.19	<i>Summary</i>	135
5.	TRANSIENT COMPRESSIONAL RESPONSE OF D-REGION IONIZATION.	143
5.1	<i>Introduction</i>	143
5.2	<i>Equations and Approximations</i>	144
5.3	<i>Formal Solutions</i>	147
5.4	<i>The D-Region Model</i>	152
5.5	<i>Solutions for the D-Region Model</i>	155
5.6	<i>Thermal Relaxation Effects</i>	156
5.7	<i>Explication of the Solutions</i>	166
5.8	<i>Discussion</i>	173
6.	STATISTICAL DESCRIPTION OF HYDRODYNAMIC TURBULENCE AND ADVECTED PASSIVE SCALAR FIELDS.	176
6.1	<i>Introduction</i>	176
6.2	<i>Statistical Description of Turbulence.</i>	176
6.3	<i>Statistical Homogeneity and Isotropy</i>	178
6.4	<i>The Spectral Formulation</i>	180
6.5	<i>The Closure Problem.</i>	182
6.6	<i>The Spectral Equations</i>	184
7.	THEORIES AND EXPERIMENTS ON THE SMALL SCALE STRUCTURE OF TURBULENCE AND ADVECTED SCALARS.	186
7.1	<i>Introduction</i>	186
7.2	<i>Similarity Theory.</i>	187
7.3	<i>Inertial Range and Inertial-Convective Range</i>	194
7.4	<i>The Viscous-Convective and Viscous-Diffusive Ranges.</i>	196
7.5	<i>The Inertial-Diffusive Range</i>	197

7.6	<i>Observations of the Energy Spectrum.</i>	199
7.7	<i>Observations of the Scalar Spectrum.</i>	202
7.8	<i>Small-Scale Intermittency.</i>	208
7.9	<i>Theory of Small-Scale Intermittency.</i>	213
7.10	<i>The Temperature Derivative Skewness.</i>	216
7.11	<i>Models of Scalar Spectral Transfer</i>	217
7.12	<i>Summary.</i>	227
8.	SCALAR SPECTRAL MODEL FOR TURBULENT ADVECTION.	229
8.1	<i>Introduction</i>	229
8.2	<i>The Model of the Scalar Spectrum</i>	230
8.3	<i>Values of k^*/k_d from Experiment.</i>	240
8.4	<i>Comparison of the Model Spectrum with Experiment</i>	244
8.5	<i>Model Determination of a Third-Order Mixed Moment.</i>	249
8.6	<i>A Diffusion Model for the Scalar Spectrum.</i>	250
8.7	<i>Summary.</i>	251
9.	APPLICATION OF THE SCALAR SPECTRAL MODEL TO THE D REGION	253
9.1	<i>Introduction</i>	253
9.2	<i>Scattering Cross Section Per Unit Volume</i>	255
9.3	<i>Sensitivity of the Cross Section to Changes in the Rate of Dissipation of Turbulent Energy.</i>	258
9.4	<i>D-Region Parameters Determining the Scattering</i>	259
9.5	<i>Estimation of the Cross Section Observed at Jicamarca.</i>	265
9.6	<i>The Electron Spectrum at Scales Smaller than the Debye Length</i>	269
9.7	<i>Some Aspects of Mesospheric Turbulence and VHF Scatter</i>	272
9.8	<i>Summary.</i>	275
	APPENDIX I. LOGNORMALITY OF GRADIENTS OF ADVECTED SCALARS	277

A-I.1 <i>Introduction</i>	277
A-I.2 <i>The Gradient Following the Fluid Motion.</i>	278
A-I.3 <i>Uniform and Persistent Straining of a Gaussian Distribution of Contaminant</i>	284
APPENDIX II. RELAXATION TO PHOTOCHEMICAL EQUILIBRIUM OF THE CONCENTRATIONS OF CHARGED SPECIES WITHIN DISPLACED AIR PARCELS IN THE D REGION	
A-II.1 <i>Introduction</i>	287
A-II.2 <i>Effects Accompanying the Displacement of Air Parcels . . .</i>	290
A-II.3 <i>Photochemical Relaxation in the Upper D Region</i>	293
A-II.4 <i>Steady-State Model of the Lower D Region</i>	301
A-II.5 <i>Processes and Time Scales for the Equilibration of the Charged Species in the Lower D Region.</i>	313
A-II.6 <i>Equilibration of Odd Oxygen and $O_2(^1\Delta_g)$ in Displaced Air Parcels.</i>	328
A-II.7 <i>Equilibration for the Charged Species in Displaced Air Parcels in the Lower D Region.</i>	340
A-II.8 <i>Discussion</i>	352
