<i>Preface</i>	v
--------------------------	---

INTRODUCTION

Historical Sketch of the Development of the Concept of the Atomic Nucleus	1
---	---

CHAPTER 1

CHARGE OF ATOMIC NUCLEI

Introduction.	6
1. Chemical Origin of Atomic Number	6
2. Number of Electrons per Atom. X-ray Scattering	7
3. Charge on the Atomic Nucleus. α -Ray Scattering	11
4. Frequency of <i>K</i> - and <i>L</i> -series X Rays	21
5. The Displacement Law	25

CHAPTER 2

RADIUS OF NUCLEI

Introduction.	28
1. The Growth of Concepts Concerning the Size of Nuclei	28
2. Coulomb-energy Difference between Isobars	31
3. Coulomb Potential inside a Nucleus	38
4. The Nuclear Potential Barrier	45
5. Wave Mechanics and the Penetration of Potential Barriers	49
6. Lifetime of α -Ray Emitters	74
7. Anomalous Scattering of α Particles	81
8. Cross Sections for Nuclear Reactions Produced by Charged Particles	89
9. Nuclear Cross Sections for the Attenuation of Fast Neutrons	94

CHAPTER 3

MASS OF NUCLEI AND OF NEUTRAL ATOMS

Introduction.	96
1. The Discovery of Isotopes and Isobars	96
2. Nomenclature of Nuclei	98
3. Mass Spectroscopy.	101
4. Atomic Mass from Nuclear Disintegration Energies	117
5. Tables of Atomic Mass	135

CHAPTER 4

NUCLEAR MOMENTS, PARITY, AND STATISTICS

Introduction.	140
1. Nuclear Angular Momentum	141

2. Nuclear Magnetic Dipole Moment	148
3. Anomalous Magnetic Moments of Free Nucleons	151
4. Relationships between I and μ	155
5. Electric Quadrupole Moment	163
6. Parity	174
7. The Statistics of Nuclear Particles	177

CHAPTER 5

ATOMIC AND MOLECULAR EFFECTS OF NUCLEAR MOMENTS,
PARITY, AND STATISTICS

Introduction.	181
1. Extranuclear Effects of Nuclear Angular Momentum and Statistics.	181
2. Extranuclear Effects of Nuclear Magnetic Dipole Moment	191
3. Extranuclear Effects of Nuclear Electric Quadrupole Moment	197

CHAPTER 6

EFFECTS OF NUCLEAR MOMENTS AND PARITY ON
NUCLEAR TRANSITIONS

Introduction.	202
1. Conservation of Parity and Angular Momentum	203
2. Penetration of Nuclear Barrier	204
3. Lifetime in β Decay	205
4. Radiative Transitions in Nuclei	211
5. Internal Conversion	218
6. Nuclear Isomers	229
7. Determination of Angular Momentum and Parity of Excited Levels from β - and γ -Transition Probabilities	232
8. Angular Correlation of Successive Radiations	234
9. Angular Distribution in Nuclear Reactions.	244

CHAPTER 7

ISOTOPIC ABUNDANCE RATIOS

Introduction.	250
1. Ratios from Mass Spectroscopy	250
2. Isotope Shift in Line Spectra	256
3. Isotope Shift in the Band Spectra of Diatomic Molecules	258
4. Isotope Ratios from Radioactive Decay Constants	262
5. Chemical and Physical Scales of Atomic Weight	262
6. Mass-spectrographic Identification of Nuclides in Nuclear Reactions	264
7. The Separation of Isotopes by Direct Selection Methods.	266
8. The Separation of Isotopes by Enrichment Methods	269
9. Szilard-Chalmers Reaction for the Enrichment of Radioactive Isotopes	275
10. Separation of Radioactive Isomers	275

CHAPTER 8

SYSTEMATICS OF STABLE NUCLEI

Introduction.	276
1. Constituents of Atomic Nuclei	276
2. Relative Abundance of the Chemical Elements	279
3. Empirical Rules of Nuclear Stability	284

Contents

xi

CHAPTER 9 BINDING ENERGY OF NUCLEI

Introduction.	294
1. Packing Fraction	294
2. Total Binding Energy	295
3. Average Binding Energy	297
4. Separation Energy for One Nucleon	302

CHAPTER 10 FORCES BETWEEN NUCLEONS

Introduction.	309
1. General Characteristics of Specifically Nuclear Forces	309
2. Ground Level of the Deuteron	313
3. Neutron-Proton Scattering at 0 to 10 Mev	317
4. Electromagnetic Transitions in the n - p System	330
5. The Proton-Proton Force at 0 to 10 Mev	338
6. Equivalence of (nn) and (pp) Forces	344
7. Summary of Central Forces	345
8. Effects of Tensor Forces	348
9. High-energy n - p and p - p Scattering	350

CHAPTER 11 MODELS OF NUCLEI

Introduction.	357
1. Summary of Experimental Evidence Which Should Be Represented by the Model	357
2. The Nuclear Shell Model	358
3. The Liquid-drop Model	365
4. Statistical Model of Excited Levels	397

CHAPTER 12 CONSERVATION LAWS FOR NUCLEAR REACTIONS

Introduction.	408
1. Physical Quantities Which Are Conserved in Nuclear Reactions.	408
2. Determination of the Q Value for Nuclear Reactions	410

CHAPTER 13 NUCLEAR REACTIONS, ILLUSTRATED BY $B^{10}(\alpha, p)$ AND ITS ASSOCIATES

Introduction.	422
1. Energy Distribution of Protons from $B^{10}(\alpha, p)C^{13}$	423
2. Discovery of the Neutron from $B + \alpha$	426
3. Discovery of Artificial Radioactivity from $B + \alpha$	430
4. Resonances in the Formation of the Compound Nucleus	434
5. Energy Loss in Inelastic Scattering	438
6. Summary of the Determination of Nuclear Energy Levels from Reaction Energetics	440

CHAPTER 14 ENERGY DEPENDENCE OF NUCLEAR-REACTION CROSS SECTIONS

Introduction.	441
1. Resonance Theory of Nuclear Cross Sections	444
2. Continuum Theory of Nuclear Cross Sections	454

CHAPTER 15

RADIOACTIVE-SERIES DECAY

Introduction.	470
1. Decay of a Single Radioactive Nuclide	470
2. Radioactive-series Decay. Growth of a Daughter Product	477
3. Accumulation of Daughter Atoms	478
4. Time of Maximum Activity of Daughter Product. Ideal Equilibrium	479
5. Ratio of Activity of Parent and Daughter. Transient Equilibrium	480
6. Yield of a Radioactive Nuclide Produced by Nuclear Bombardment	484
7. Growth of a Granddaughter Product	486
8. General Equations of Radioactive-series Growth and Decay.	490
9. Accumulation of Stable End Products	494
10. Summation Rules	496
11. Approximate Methods for Short Accumulation Times.	500
12. Graphical Methods for Series Growth and Decay	502

CHAPTER 16

α -RAY SPECTRA

Introduction.	511
1. Fine Structure of α -Ray Spectra	511
2. Genealogy of Nuclides Which Emit α Rays.	517
3. The Nuclear Energy Surface, for Heavy Nuclides	523
4. Systematics of α Decay Energies.	527

CHAPTER 17

β -RAY SPECTRA

Introduction.	536
1. Experimental Characteristics of the β -Ray Continuum	536
2. The Neutrino	541
3. Fermi Theory of β Decay	548

CHAPTER 18

IONIZATION OF MATTER BY CHARGED PARTICLES

Introduction.	567
1. Classical Theory of Inelastic Collisions with Atomic Electrons	570
2. Quantum-mechanical Theories of Inelastic Collisions with Atomic Electrons	574
3. Comparison of Classical and Quantum-mechanical Theories	584
4. Energy Loss per Ion Pair by Primary and Secondary Ionization.	586
5. Dependence of Collision Losses on the Physical and Chemical State of the Absorber.	587
6. Čerenkov Radiation.	589

CHAPTER 19

ELASTIC SCATTERING OF ELECTRONS AND POSITRONS

1. Scattering of Electrons by Nuclei.	592
2. Scattering of Swift Electrons by Electrons	597

CHAPTER 20

RADIATIVE COLLISIONS OF ELECTRONS WITH ATOMIC NUCLEI

Introduction.	600
1. Theory of Bremsstrahlung.	600
2. Comparison of Various Interactions between Swift Electrons and Atoms.	606

CHAPTER 21

STOPPING OF ELECTRONS BY THICK ABSORBERS

Introduction.	611
1. Path Length and Range of Electrons.	611
2. Thick-target Bremsstrahlung.	614
3. Range-Energy Relations for Electrons	621
4. Annihilation Radiation.	629

CHAPTER 22

PASSAGE OF HEAVY CHARGED PARTICLES THROUGH MATTER

Introduction.	632
1. Capture and Loss of Electrons	633
2. Energy Loss per Unit Path Length	637
3. Range-Energy Relationships	647
4. Ionization of Gases.	654
5. Straggling	660
6. Range of Fission Fragments	668

CHAPTER 23

THE INTERACTION OF ELECTROMAGNETIC
RADIATIONS WITH MATTER.

COMPTON SCATTERING AND ABSORPTION

Introduction.	672
1. Compton Collision and the Conservation Laws.	674
2. Klein-Nishina Cross Sections for Polarized and Unpolarized Radiation	677
3. Compton Attenuation Coefficients	684
4. Angular Distribution of Compton Scattered Photons and Recoil Electrons	690
5. Energy Distribution of Compton Electrons and Photons	692

CHAPTER 24

PHOTOELECTRIC EFFECT AND PAIR PRODUCTION

1. Photoelectric Effect.	695
2. Pair Production by Photons	701

CHAPTER 25

ATTENUATION AND ABSORPTION OF ELECTROMAGNETIC RADIATION

Introduction.	711
1. Attenuation Coefficients	711
2. Energy Absorption.	719
3. Multiple Scattering of Photons	728
4. Distributed γ -Ray Sources	736

CHAPTER 26

STATISTICAL FLUCTUATIONS IN NUCLEAR PROCESSES

Introduction.	746
1. Frequency Distributions	747
2. Statistical Characterization of Data	757
3. Composite Distributions	766

CHAPTER 27

STATISTICAL TESTS FOR GOODNESS OF FIT

Introduction.	774
1. Lexis' Divergence Coefficient	774

2. Pearson's Chi-square Test.	775
3. An Extension of the Chi-square Test.	777
4. Examples of Random Fluctuations	777

CHAPTER 28

APPLICATIONS OF POISSON STATISTICS TO SOME INSTRUMENTS USED
IN NUCLEAR PHYSICS

Introduction.	785
1. Effects of the Finite Resolving Time of Counting Instruments	785
2. Scaling Circuits.	794
3. Counting-rate Meters	803
4. Ionization Chambers	810
5. Rapid Decay of a Single Radionuclide	812
6. Radioactive-series Disintegrations	818

APPENDIX A

THOMSON SCATTERING AS AN ILLUSTRATION OF THE WAVE
AND CORPUSCULAR CONCEPTS OF CROSS SECTION

Introduction.	819
1. Thomson Scattering	819
2. Comparison of Wave and Corpuscular Concepts of Cross Section	821

APPENDIX B

CENTER-OF-MASS COORDINATES, AND THE NONRELATIVISTIC
ELASTIC COLLISION IN CLASSICAL MECHANICS

Introduction.	828
1. Relations between L (Laboratory) and C (Center-of-mass) Coordinates.	828
2. Equation of the Hyperbola in Polar Coordinates	836
3. Elastic Collision between Charged Particles.	838
4. Cross Sections for Elastic Scattering by Coulomb Forces.	847
5. Summary of Principal Symbols and Results.	851

APPENDIX C

THE WAVE MECHANICS OF NUCLEAR POTENTIAL BARRIERS

Introduction.	852
1. Exact Solution of Schrödinger's Equations for a One-dimensional Rectangular Barrier	852
2. Schrödinger's Equation for a Central Field.	860
3. Representation of the Plane Wave in Spherical Polar Coordinates	866
4. Physical Correspondence between Partial Waves and Classical Impact Parameters	869
5. Transmission through a Nuclear Potential Barrier.	874
6. Elastic Scattering of Particles Incident on a Nuclear Potential Barrier.	878

APPENDIX D

Relativistic Relationships between Mass, Momentum, Energy, and Magnetic Rigidity	890
--	-----

APPENDIX E

Some Basic Atomic and Nuclear Constants.	898
--	-----

Contents

xv

APPENDIX F

Table of the Elements	900
---------------------------------	-----

APPENDIX G

Some Useful Inefficient Statistics.	902
<i>Bibliography</i>	905
<i>Glossary of Principal Symbols</i>	939
<i>Index</i>	953
